A CHAPMAN & HALL BOOK

Contents

Preface	•	vii
About th	e Authors	xi
1. Intro	oduction	1
1.1	Conjoint Analysis	
1.2	Discrete Choice Experimentation	7
1.3	Random Utility Models	
1.4	The Logistic Model	
1.5	Contributions of the Book	13
2. Som	e Statistical Concepts	15
2.1	Principles of Experimental Design	15
2.2	Experimental versus Treatment Design	
2.3	Balanced Incomplete Block Designs and 3-Designs	
2.4	Factorial Experiments	
2.5	Fractional Factorial Experiments	
2.6	Hadamard Matrices and Orthogonal Arrays	.28
2.7	Foldover Designs	^31
2.8	Mixture Experiments	32
2.9	Estimation	35
	2.9.1 Probability Models	35
	2.9.2 Linear Estimation: Least Squares and Weighted	
	Least Squares.	
	2.9.3 Maximum Likelihood Estimation	
2.10	Transformations of the Multinomial Distribution	40
2.11	Testing Linear Hypotheses	43
3. Gen	eric Designs	
3.1	Introduction ¹ .	
3.2	Four Linear Models Used in CA and DCE,^	
	3.2.1 Brands-Only Models	
	3.2.2 Attributes-Only Models	
	3.2.3 Brand-Plus-Attributes Designs	
	3.2.4 Brand-Plus-Attributes and Selected Two-Way	
	Interactions Models	
3.3	Brands-Only Designs	
3.4	Attributes-Only Designs	
3.5	Brands-Plus-Attributes Designs	
3.6	Brands, Attributes, and Interaction Design	

	3.7	Estimation and Hypothesis Testing	72
	Appe	ndix 3A: Logit Analysis of Traditional Conjoint Rating	
	11	Scale Data	
4.	Desig	gns with Ordered Attributes	
	4.1	Introduction	83
	4.2	Linear, Quadratic, and Cubic Effects	
		4.2.1 Attributes at Two Levels	
		4.2.2 Attributes at Three Levels	87
		4.2.3 Attributes at Four Levels	
		4.2.4 Attributes at Five Levels	
	4.3	Interaction Components: Linear and Quadratic	
	4.4	An Illustration	
	4.5	Pareto Optimal Designs	
	4.6.	Inferences on Main Effects	
	4.7	Inferences on Main Effects $in2^m$ Experiments	99
	48	Inferences on Interactions	100
	49	Orthogonal Polynomials	101
	4 10	Substitution Rate of Attributes	103
			105
5.	Redu	icing Choice Set Sizes	107
	51	Introduction 7.	107
	52	Subsetting Choice Sets	108
	53	Subsetting Levels into Overlapping Sets	108
	54	Subsetting Attributes into Overlapping Sets	110
	5.5	Designs Generated from a BIBD	110 111
	56	Cyclic Construction: s Choice Sets of Size s Each for an s ^s	
	5.0	Experiment	112
	57	Experiment.	112 113
	5.7	Estimating a Subset of Interactions	113
6	Avoi	lability (Cross Efforts) Designs	117
0.	Aval	Introduction	/ 117 '
	0.1 6 2	Dronda Only Availability Designs	
	0.2	G21 Deletionshing between Augilability Effects and	
		6.2.1 Relationships between Availability Effects and	100
		Interactions.	
		6.2.2 Generating the Design Matrix for an Availability	107
	()	Design	127
	6.3	Portfolio Designs	128
		6.3.1 Random Utility Model for Portfolio Choice	129
	6.4	Brand and One (or More) Attributes	
		6.4.1 Brands with One Attribute>	
		6.4.2 One Attribute at Three or More Levels	
	6.5	Brands and More than One Attribute	141
		6.5.1 General Results for Two or More Attributes with	
		Two or More Levels	142

I i

7. Sequential Methods			145
	7.1	Introduction	145
	7.2	Sequential Experiment to Estimate All Two- and Three-	
		Attribute Interactions	
	7.3	Sequential Methods to Estimate Main Effects and	
		Interactions, Including a Common Attribute in 2 ^m	
		Experiments	
	7.4	CA Testing Main Effects and a Two-Factor Interaction	
		Sequentially	
	7.5	Interim Analysis	
	7.6	Some Sequential Plans for 3 ^m Experiments	
8.	Mix	ture Designs	
	8.1	Introduction	
	8.2	Mixture Designs: CA Example	
	8.3	Mixture Designs: DCE Example	
	8.4	Mixture-Amount Designs.	
	8.5	Other Mixture Designs.	
	8.6	Mixture Designs: Field Study Illustration
