| Biomimetic Chemistry of Hybrid Materials                                                                          | 31   |
| <i>Knut Rurack and Ramon Martinez-Manez</i>                                                                       |      |
| Biom mineralization: Peptide-Mediated Synthesis of Materials                                                      | 51   |
| <i>Ryan D. Rutledge and David W. Wright</i>                                                                       |      |
| Biom mineralization: Self-Assembly Processes                                                                      | 75   |
| <i>Shu-Hong Yu and Shaofeng Chen</i>                                                                              |      |
| Carbon Nanotubes, Multi-Walled                                                                                    | 99   |
| <i>Rodney Andrews, Matthew C. Weisenberger, Dali Qian, Mark S. Meier, Kelby Cassity and Paid E. Yeary</i>         |      |
| Carbon Nanotubes, Single-Walled: Functionalization by Intercalation                                               | 129  |
| <i>Hicletsigu Shiozawa, Thomas Pichler, Rudolf Pfeiffer and Hans Kuzmany</i>                                      |      |
| Carbon Nanotubes: Fluorinated Derivatives                                                                         | 149  |
| <i>Valery N. Khabashesku, Oleksandr V. Kuznetsov and Merlyn X. Pulikkathara</i>                                   |      |
| Carbon Nanotubes and Nanocomposites for Electrical and Thermal Applications                                       | 169  |
| <i>Wei Wang, Fushen Lu, Lucia Monica Veca, Mohammed J. Meziani, Xin Wang, Li Cao, Lingrong Gu and Ya-Ping Sun</i> |      |
| Endohedral Fullerenes                                                                                             | 189  |
| <i>Shangfeng Yang and Lothar Dunsch</i>                                                                           |      |
| Fullerenes: Metal Complexes                                                                                       | 215  |
| <i>Alan L. Balch and Christopher J. Chancellor</i>                                                                |      |
| Fullerenes: Nanoscale-Ordered Materials                                                                           | 227  |
| <i>Dirk M. Guldi</i>                                                                                              |      |
| Gold Nanoparticles as Chemical Catalysts                                                                          | 247  |
| <i>Zhen Ma, Steven H. Overbury and Sheng Dai</i>                                                                  |      |
| Gold Nanoparticles: Monolayer-Protected Scaffolds and Building Blocks                                             | 267  |
| <i>Yuval Ofir, Sudhanshu Srivastava and Vincent M. Rotello</i>                                                    |      |

# VIII CONTENTS

|                                                                                                                                                                 |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Inorganic Nanobelt Materials<br><i>Shu-Hong Yu and Wei-Tang Yao</i>                                                                                             | 291 |
| Inorganic Nanocrystals: Patterning and Assembling<br><i>Maria Lucia Curri, Roberto Comparelli, Marinella Striccoli, Nicoletta Depalo and Elisabetta Fanizza</i> | 327 |
| Inorganic Nanomaterials Synthesis Using Alkalide Reduction<br><i>Michael J. Wagner</i>                                                                          | 357 |
| Inorganic Nanomaterials Synthesis Using Ionic Liquids<br><i>Andreas Taubert</i>                                                                                 | 369 |
| Inorganic Nanomaterials Synthesis Using Liquid Crystals<br><i>Cedric Boissiere, David Grosso and Eric Prouzet</i>                                               | 381 |
| Inorganic Nanotubes<br><i>Maja Remskar</i>                                                                                                                      | 399 |
| Inorganic Semiconductor Nanomaterials for High-Performance Flexible Electronics<br><i>Jong-Hyun Ahn, Alfred J. Baca and John A. Rogers</i>                      | 411 |
| Liquid-Phase Synthesis of Inorganic Nanoparticles<br><i>Gabriel Caruntu, Daniela Caruntu and Charles J. O'Connor</i>                                            | 427 |
| Metal Oxide Nanoparticles<br><i>Marcos Fernandez-Garcia and Jose A. Rodriguez</i>                                                                               | 453 |
| Monodisperse Magnetic Nanoparticles: Chemical Synthesis and Surface Modification<br><i>Jin Xie and Shouheng Sun</i>                                             | 475 |
| Molecular and Supramolecular Arrays of the $[\text{Re}_6(\text{t}_3\text{-Se})\text{jf}]^{2+}$ Core-Containing Clusters<br><i>Zhiping Zheng</i>                 | 489 |
| Multicolor Quantum Dots in Molecular Profiling of Cancer Cells and Tissues<br><i>Pavel Zrazhevskiy and Xiaohu Gao</i>                                           | 505 |
| Nano/Microporous Materials: Crystalline Metal-Chalcogenide Superlattices<br><i>Zhien Lin, Pingyun Feng and Xianhui Bu</i>                                       | 521 |
| Nano/Microporous Materials: Hydrogen-Storage Materials<br><i>David J. Collins and Hong-Cai Zhou</i>                                                             | 535 |
| Nano/Microporous Materials: Hydrothermal Synthesis of Zeolites<br><i>Valentin Valtchev and Svetlana Mintova</i>                                                 | 543 |
| Nano/Microporous Materials: Mesoporous and Surface-Functionalized Mesoporous Carbon<br><i>Xiqing Wang, Chengdu Liang and Sheng Dai</i>                          | 563 |
| Nano/Microporous Materials: Metal-Ion Sorption Materials<br><i>David T. Hobbs</i>                                                                               | 581 |
| Nano/Microporous Materials: Nanostructured Layered Double Hydroxides<br><i>Fabrice Leroux and Vanessa Prevot</i>                                                | 589 |
| Nano/Microporous Materials: Transition Metal Cyanides<br><i>Tong-Bu Lu, David J. Collins and Hong-Cai Zhou</i>                                                  | 619 |
| Nanocomposite Materials: Polyhedral Silsesquioxanes<br><i>Alexander M. Seifalian, Hossein Ghanbari, Raheleh Bakhshi and Ruben Y. Kannan</i>                     | 631 |

|                                                                                                               |     |
