

Protein facts

Fibrous proteins in cultural and natural history artifacts

Mary-Lou E. Florian

Contents

| | |
|--|----------|
| Preface | vii |
| Acknowledgements | viii |
| 1 Introduction | 1 |
| 1.1 The manual | 1 |
| 1.2 Why group heritage artifacts and natural history specimens together? | 1 |
| 1.3 ^Why is it important to study the basic information on the cellular tissue structure and the protein chemistry of these materials? | 5 |
| 1.3.1 Hierarchy of structure of the fibrous protein material | 5 |
| 1.3.2 Basic structure of the different fibrous proteins in the materials | 5 |
| 1.3.3 The structural strength and other physical-chemical characteristics of proteinaceous materials | 6 |
| 1.3.4 The colloidal nature of the proteins | 6 |
| 1.4 An interdisciplinary approach | 6 |
| 2 The structure of the skin and its derivatives, and other collagenous tissues used in heritage objects | 9 |
| 2.1 The skin of vertebrates | 9 |
| 2.1.1 Introduction | 9 |
| 2.1.2 Epidermis | 9 |
| 2.1.3 Dermis | 9 |
| 2.1.4 Colours in the skin | 11 |
| 2.2 Fish skins | 12 |
| 2.2.1 General structure | 12 |
| 2.2.2 Epidermis | 12 |
| 2.2.3 Dermis | 13 |
| 2.3 Reptile skins | 14 |
| 2.3.1 Introduction | 14 |
| 2.3.2 Snakes and lizards | 15 |

PROTEIN FACTS

| | | |
|-------|--|----|
| 2.3.3 | Crocodiles and alligators | 16 |
| 2.3.4 | Turtles | 17 |
| 2.4 | Birds | 17 |
| 2.4.1 | Structures of epidermal skin and extensions (scales, claws, beaks and feathers) | 17 |
| 2.4.2 | Structural colours | 19 |
| 2.5 | Mammalian skins and structures of epidermal origin | 20 |
| 2.5.1 | Hair structure, species identification, colour, moulting, modified hairs and deterioration | 20 |
| 2.5.2 | Horn | 27 |
| 2.5.3 | Claws, nails and hooves | 27 |
| 2.5.4 | Skin of marine mammals | 28 |
| 2.6 | Gut, ligaments and tendons | 30 |
| 2.7 | Biologically mineralized tissue: mammalian teeth and bones | 33 |
| 2.7.1 | Enamel and dentin structures: teeth and ivory | 34 |
| 2.7.2 | Bony structures: bones and antlers | 36 |
| 3 | Amino acids: the building blocks of fibrous proteins | 41 |
| 3.1 | General structure of fibrous proteins | 41 |
| 3.2 | Amino acids | 42 |
| 3.2.1 | What is the role of amino acids? | 42 |
| 3.2.2 | General characteristics of amino acids | 45 |
| 3.2.3 | Amino acid reactions and changes | 48 |
| 4 | Agents of protein deterioration | 51 |
| 4.1 | Introduction | 51 |
| 4.2 | Water | 51 |
| 4.2.1 | Water in hydrolysis | 51 |
| 4.2.2 | Some reactions involving water | 55 |
| 4.3 | Oxygen, light and lipids | 56 |
| 4.3.1 | Oxygen | 56 |
| 4.3.2 | Free radicals, light and lipids | 57 |
| 4.4 | Air pollution gases: ozone, sulphur dioxide, nitrogen dioxide and carbon dioxide | 59 |
| 4.4.1 | Ozone | 59 |
| 4.4.2 | Sulphur dioxide | 59 |
| 4.4.3 | Nitrogen dioxide | 60 |
| 4.4.4 | Carbon dioxide | 60 |
| 4.5 | Metals and salts | 60 |
| 4.6 | Heat | 61 |
| 5 | Water in fibrous protein materials | 63 |
| 5.1 | Introduction | 63 |
| 5.2 | The nature of water | 65 |
| 5.2.1 | The states of water and energy of change | 65 |
| 5.2.2 | Vapour pressure and the activity of water | 65 |

| | | |
|----------|---|-----------|
| 5.3 | Water vapour in the air | 67 |
| 5.3.1 | Relative humidity (RH), absolute humidity (AH) and temperature | 67 |
| 5.3.2 | The importance of the dew point and microenvironments | 69 |
| 5.4 | The characteristics of water in fibrous and colloidal materials | 69 |
| 5.4.1 | Location and properties of water in the protein materials | 69 |
| 5.4.2 | Release of water from drying materials | 70 |
| 5.4.3 | Equilibrium moisture content (EMC) and regain ability of materials | 71 |
| 5.4.4 | Hysterical hysteresis | 73 |
| 5.4.5 | Chemicals in materials: changes in water activity (a_w) in materials | 74 |
| 5.5 | Colloids | 74 |
| 5.5.1 | What are colloids? | 74 |
| 5.5.2 | Gelatin and the importance of the glass transition point | 75 |
| 5.6 | The role of water and biodeterioration | 76 |
| 6 | Collagen structure | 79 |
| 6.1 | Introduction | 79 |
| 6.2 | Molecular organization | 79 |
| 6.2.1 | Polypeptide chain: the protein molecule | 79 |
| 6.2.2 | Three-chained molecule: tropocollagen | 84 |
| 6.2.3 | Water in the collagenous material: inside and outside | 84 |
| 7 | Tanning: processes, deterioration and interaction with collagen | 87 |
| 7.1 | Introduction | 87 |
| 7.2 | Pre-tanning processes | 87 |
| 7.3 | Tanning processes | 87 |
| 7.3.1 | Smoking | 87 |
| 7.3.2 | Oil process and chamois tannage | 88 |
| 7.3.3 | Alum tawing | 88 |
| 7.3.4 | Vegetable tanning | 88 |
| 7.3.5 | Chrome tanning | 93 |
| 7.3.6 | Chewing | 93 |
| 7.4 | Finishing processes | 93 |
| 7.5 | Parchment | 94 |
| 8 | Deterioration of collagen | 95 |
| 8.1 | Bonds in collagen: sites of deterioration | 95 |
| 8.2 | Chemical changes in deterioration in dry collagen and leather | 95 |
| 8.2.1 | Chemical deterioration of collagen polymer into peptides | 95 |
| 8.2.2 | Amino acid changes in deteriorated leather | 97 |
| 8.3 | Physical changes due to hydration of collagen in wet skins, leather and natural history specimens | 98 |
| 8.3.1 | The water in wet skins | 98 |
| 8.3.2 | Swelling of collagen | 99 |
| 8.4 | Influence of salts and other deteriorating agents on hydrated collagen | 100 |
| 8.4.1 | Acid and alkaline conditions: pH | 100 |
| 8.4.2 | Neutral salts | 100 |

| | | |
|--------|---|-----|
| 8.4.3 | Non-electrolytes | 101 |
| 8.4.4 | Radiation | 102 |
| 8.4.5 | Biodeterioration | 102 |
| 8.5 | Denaturation and shrinkage temperature of hydrated collagen | 104 |
| 8.5.1 | Denaturation | 104 |
| 8.5.2 | Shrinkage temperature | 104 |
| 8.5.3 | Shrinkage temperature as a method of assessment of the deterioration state of collagenous materials | 105 |
| 8.6 | Collagen changes in natural history specimens due to preservation methods | 107 |
| 8.6.1 | Effects of alcohols on hydrated collagen in liquid storage of natural history specimens | 107 |
| 8.6.2 | Effects of aldehydes on hydrated collagen in liquid storage of natural history specimens | 108 |
| 8.6.3 | Reported interactions of many natural history preparation methods on collagen | 110 |
| | | |
| 9 | Keratin | 113 |
| 9.1 | Molecular organization: coiled coils | 113 |
| 9.2 | Cellular organization: keratinization of tissue | 115 |
| 9.3 | Keratin as a colloid | 118 |
| 9.4 | Chemical reactivity of keratin | 119 |
| 9.4.1 | Introduction | 119 |
| 9.4.2 | Chemical deterioration | 119 |
| 9.5 | Biodeterioration | 122 |
| | | |
| 10 | Silk | 123 |
| 10.1 | Source | 123 |
| 10.2 | Structure of fibroin | 124 |
| 10.3 | Reactivity of fibroin | 126 |
| 10.4 | Deterioration by metals used in weighting silk | 127 |
| 10.5 | Analysis of deterioration of fibroin polymer | 128 |
| | | |
| 11 | Striated muscle and elastin in fluid-preserved natural history specimens | 131 |
| 11.1 | The fluids and their chemicals | 131 |
| 11.2 | Striated muscle proteins | 134 |
| 11.2.1 | Muscle tissue and function | 134 |
| 11.2.2 | Myosin and actin | 136 |
| 11.3 | Elastin | 137 |
| 11.4 | Post-mortem changes | 138 |
| | | |
| | Bibliography | 141 |
| | Index | 157 |
