

Photovoltaics for Professionals

Solar Electric Systems – Marketing, Design and Installation

Falk Antony
Christian Durschner
Karl-Heinz Remmers

Contents

1	Marketing and Promoting Photovoltaics	
1.1	Renewable energy	9
1.1.1	<i>Renewable energy around the world</i>	10
1.2	Climate change and dwindling fossil fuel reserves	11
1.3	Overview of renewable energy, solar energy and the solar resource	13
1.4	Photovoltaics (PV)	17
1.4.1	PV system types	17
1.4.2	PV's unique selling points	18
1.4.3	Building integrated photovoltaics (BIPV)	19
1.4.4	Future potential	20
1.4.5	PV in non-sunny regions	21
1.4.6	The economic viability of PV	24
1.4.7	What energy generation might look like in the future	25
1.5	Marketing PV	27
1.5.1	Finding customers	29
1.5.2	Demonstration systems	29
1.5.3	Initial consultancies with customers	30
1.5.4	Contracts, quotes, estimates and insurance	31
1.5.5	The market for grid-tied PV	33
1.5.6	The market for stand-alone PV	36
1.5.7	Opportunities for marketing other renewable energy technologies	40
1.6	Case study: Germany, a solar success story	43
2	Solar Cells, PV Modules and the Solar Resource	
2.1	Basic PV concepts and terminology	46
2.1.1	Cell efficiency, module efficiency, systems efficiency	47
2.2	PV module technology	47
2.2.1	Monocrystalline silicon	48
2.2.2	Polycrystalline silicon	49
2.2.3	Thin film cells	49
2.2.4	Amorphous silicon	49
2.3	Solar cells	52
2.3.1	Crystalline solar cells-what they are made from and how they work	52
2.3.2	Peak power	54
2.3.4	Short circuit current and open circuit voltage	54
2.3.5	Effect of temperature on solar cell output	56
2.3.6	Cell technology-future prospects	56
2.4	PV modules	57
2.4.1	Choosing a module-main points	59

2.4.2	Which module manufacturer?	60
2.4.3	Which type of solar cell?	60
2.4.4	PV module electrical characteristics	63
2.4.5	Temperature tolerances, hail impact resistance, module weight and dimensions	63
2.4.6	PV module frames and inter-module electrical connections	64
2.4.7	PV module/system compatibility	65
2.4.8	PV module specifications and their importance	65
2.4.9	The question of efficiency	67
2.4.10	Quality requirements, quality marks and seals, standards and certification	67
2.4.11	PV module warranties, guarantees and replacements	68
2.4.12	The cost of PV modules	69
2.5	Estimating the output of PV systems, array angles and orientation	70
2.6	Sizing and design software	79
2.7	Purchasing PV modules and other system components	81
3	Grid-tied PV Systems	
3.1	Principal components of a grid-tied PV system	82
3.2	Grid-tied inverters	83
3.2.1	Grid-tied inverters and PV module configurations	85
3.2.2	Inverter design concepts – central inverters, single- and multi-string inverters and module inverters	87
3.2.3	Multiple interconnected inverters	92
3.2.4	Inverter- PV array compatibility, inverter size and location	92
3.2.5	Inverter technical specifications and efficiencies	93
3.2.6	Inverters –other issues	94
3.3	Other components in grid-tied PV systems	96
3.3.1	Cables	96
3.3.2	The PV array combiner box	97
3.3.3	The main DC disconnect/isolator	98
3.3.4	Meters and net-metering	98
3.3.5	Remote monitors	99
3.4	PV module mounting structures and systems	99
3.5	Whereto install: roof, facade or ground?	102
3.6	The site survey	105
3.7	Lightning and surge/over-voltage protection	106
3.8	Fire hazards and protection measures	109
3.9	Designing grid-tied PV systems-some examples	110
3.9.1	Example 1: Suburban family home, no shading, 5kWp	112
3.9.2	Example 2: Barn, sloping roof, circa. 15 kWp, 30 kWp	119
3.9.3	Example 3: Warehouse, flat roof, circa. 30 kWp	122
3.10	The problem of shading	126

3.10.1	Types of shading	127
3.10.2	Shade analysis aids	128
3.10.3	Solutions to shading	129
3.11	Preparing cost estimates and quotes	133
4	Grid-tied PV Systems – Installation and Commissioning	
4.1	Overview	135
4.2	Preliminary paperwork	136
4.3	System installation	136
4.3.1	Who is allowed to install a grid-tied PV system?	136
4.3.2	Working on roofs-safety issues	136
4.3.3	Electrical work on PV arrays –particular hazards	137
4.3.4	Installing the modules – general guidelines	139
4.4	DC cable installation-general guidelines	142
4.4.1	DC wiring-modules and strings	143
4.4.2	PV array combiner box and terminating the strings	144
4.4.3	DC wiring from PV array combiner box to inverter	145
4.4.4	The main DC disconnect / isolator	146
4.4.5	Grid-tied inverter installation and wiring	146
4.4.6	Installing remote monitors	149
4.4.7	Fuses and circuit breakers	149
4.5	Grounding/earthing	150
4.6	Connection to the grid and meter location	150
4.7	Final permission to connect	152
4.8	System commissioning	153
4.9	System handover to customer	154
5	Grid-tied PV Systems – Operation and Maintenance	
5.1	Grid-tied PV system operation	155
5.2	Monitoring system performance	155
5.3	Maintenance and servicing	155
5.3.1	Maintenance-what system owners can do	155
5.3.2	Maintenance-what the PV specialist can do	156
5.4	Possible malfunctions in grid-tied PV systems	157
5.4.1	System producing less than expected	157
5.4.2	Problems originating on the utility grid	158
5.5	Fault finding and trouble shooting guide	160
5.5.1	Malfunction category 1: No system output during the day	160
5.5.2	Malfunction category 2: System output lower than expected	162
5.5.3	Malfunction category 3: System output lower than it used to be	163
6	Stand-alone PV Systems	
6.1	Introduction	164
6.1.1	Stand-alone PV systems-basic description	165

6.1.2	Applications and limitations	165
6.1.3	Future prospects for stand-alone PV systems	167
6.2	Stand-alone PV system configurations	168
6.3	PV stand-alone systems – principal components	169
6.3.1	PV modules and arrays in stand-alone systems	169
6.3.2	Charge controllers	171
6.3.3	Batteries	172
6.3.4	Electrical appliances, lights and loads	181
6.3.5	Inverters in stand-alone systems	182
6.3.6	Cables and accessories	183
6.4	Designing stand-alone PV systems	184
6.4.1	Feasibility assessment, site survey	185
6.4.2	Assessment of system energy requirements	185
6.4.3	System concept development	186
6.4.4	Assessment of solar resource for stand-alone PV system sites	186
6.5	Stand-alone PV system sizing	187
6.5.1	Sizing stand-alone PV arrays	187
6.5.2	Battery sizing	188
6.5.3	Cable selection	189
6.5.4	Sizing example – holiday home	189
6.6	Installation and commissioning	193
6.6.1	General safety guidelines	193
6.6.2	Electrical work on stand-alone PV systems and particular hazards	194
6.6.3	Lightning protection in stand-alone PV systems	195
6.6.4	Grounding/earthing	195
6.6.5	Battery safety	195
6.6.6	Installing and commissioning batteries	196
6.6.7	Battery rooms	197
6.7	Stand-alone system maintenance	198
6.7.1	PV module/array maintenance	198
6.7.2	Battery maintenance	198
7	Appendices	
7.1	Installation codes and guidelines	199
7.2	Standards for PV modules, system components and systems	200
7.3	Sizing and design software	200
7.4	Site survey form – grid-tied PV systems	201
7.5	Site survey form-stand-alone PV systems	204
7.6	Sources of further information	207
7.7	Power losses and voltage drop in PV systems	209
7.8	Abbreviations	211
7.9	Physical units	213
7.10	Index	213
