ACADEMIC PRESS New York and London

Contents

<i>Preface</i>	xi
<i>Acknowledgments</i>	xiii
<i>Symbolology of Flowcharts</i>	xv
<i>List of Sample Programs</i>	xvii
Chapter 1. Computers in Libraries	1
Chapter 2. Programming Fundamentals	
2.1 Program Execution	4
2.2 The PL/I Program	6
2.3 PL/I Character Set	8
2.4 Format Rules	12
Chapter 3. Basic Instruction Types in PL/I	
3.1 Defining the Boundaries of a Program	15
3.2 Storage Allocation	16
3.3 Assignment Statements	18
3.4 Input-Output Statements	22
3.5 Control and Decision Statements	35

Chapter 4. Character Data

4.1	Representation of Character Strings	43
4.2	Declaration of Character Variables	44
4.3	The VARYING Attribute	44
4.4	The INITIAL Attribute	45
4.5	Character Data as Output	46
4.6	Character Strings in the IF Statement	46

Chapter 5. Character Manipulation

5.1	Concatenation	51
5.2	The Substring Function	52
5.3	The INDEX Function	53
5.4	The LENGTH Function	53
5.5	The TRANSLATE Function	54
5.6	The VERIFY Function	55
5.7	Use of SUBSTR as a Pseudo-Variable	57
5.8	Programming Illustrations of Character-String Functions	58

Chapter 6. Statement Label Data

6.1	Statement Label Constants	61
6.2	Statement Label Variables	61

Chapter 7. The DO Statement

7.1	The DO Group	66
7.2	The DO Loop	67
7.3	Programming Illustrations of the DO Statement	71

Chapter 8. Arrays and Structures

8.1	Arrays	78
8.2	Declaration of Arrays	79
8.3	Operations on Arrays	81
8.4	Structures	88
8.5	Declaration of Structures	89
8.6	Operations on Structures	90

Chapter 9. Basic Concepts of Boolean Algebra

9.1	The Concept of Sets	95
9.2	Boolean Variables, Functions, and the AND, OR, NOT Operators	100
9.3	Some Useful Equivalences	103
9.4	Normal Form Expressions	105
9.5	Evaluation of Boolean Functions by Truth Tables	112
9.6	A Generalized Notation	113

Chapter 10. A Logical Analysis of Document Retrieval

10.1	Introductory Remarks	116
10.2	Solution of Simultaneous Boolean Equations	118
10.3	Representation of Boolean Equations	120
10.4	Search Requests as Normal Form Expressions	121
10.5	Evaluating Search Requests	122
10.6	General Formulation of the Problem	124
10.7	A Characterization of F and Method of Request Evaluation Based on F	125
10.8	Illustration of the Method	128

Chapter 11. Binary Vectors, Bit String Manipulation, and Document Retrieval

11.1	Bit Strings	133
11.2	BOOL, UNSPEC, and STRING Functions	135
11.3	Organization of a Coordinate Index as Binary Vectors	138
11.4	Implementation of the Search Request	140
11.5	Cyclic Retrieval	143

Chapter 12. Program Organization

12.1	Introduction	150
12.2	PL/I Procedures	151
12.3	Subroutines	154
12.4	Function Procedures	160
12.5	BEGIN Blocks	163

Chapter 13. File Data Management

13.1	Introduction	167
13.2	File Attributes	168
13.3	File Processing	170

Chapter 14. Based Variables for List Processing

14.1	Based Storage and Pointer Variables	189
14.2	Allocation of Based Storage	190
14.3	Some Applications of Based Storage	191
14.4	List Processing	194

Solutions to Exercises	197
-------------------------------	-----

Selected Bibliography	223
------------------------------	-----

1	Introduction to Boolean Algebra	223
2	Document Handling and Retrieval	223
3	Programming for Information Handling	224
4	Advanced Readings in the Logic of Document Retrieval	224

<i>Index</i>	225
