Preface . . . . .	11
Introduction . . . . .	13
Notation employed . . . . .	21

## I Basic terms, relations and assumptions of the theory of elastic orthotropic shells

1 <i>Some terms</i> . . . . .	23
2 <i>General relationships of the theory of elastic orthotropic shells</i> . . . . .	27
2.1 Coordinate system and the region considered . . . . .	27
2.2 Strain-displacement equations . . . . .	29
2.3 Stress-strain equations . . . . .	29
2.4 Generalized inner forces . . . . .	31
2.5 Equations of equilibrium . . . . .	33
2.6 Boundary conditions . . . . .	35
3 <i>Specific concepts of the theory of layered shells</i> . . . . .	39
4 <i>Basic theory of sandwich shells</i> . . . . .	42
4.1 Fundamental assumptions . . . . .	43
4.2 Components of displacement . . . . .	44
4.3 Strain components . . . . .	44
4.4 Stress components . . . . .	45
4.5 Thermoelastic stresses . . . . .	49
4.5.1 Heat conduction in a layered wall . . . . .	50
4.5.2 Thermoelastic stresses . . . . .	56
5 <i>On possible formulations of simplified theories. Some limit processes</i> . . . . .	57
5.1 Simplified theories . . . . .	57
5.2 Limit processes . . . . .	58

## II Membrane theory of layered shells

6 <i>Introductory remarks and working hypotheses</i> . . . . .	61
--	----

7	<i>Cylindrical shells</i>	64
7.1	Fundamental relations. Formulation of the problem	64
7.2	General solution of the problem	67
7.3	Boundary loading	73
7.3.1	Simple tension	74
7.3.2	Simple bending	75
7.3.3	Simple torsion	77
7.4	Pressure of a liquid	78
7.4.1	Horizontal shell	78
7.4.2	Horizontal pressure vessel	81
7.4.3	Inclined shell	82
7.4.4	Vertical shell	87
7.5	Uniform internal pressure	89
7.6	Weight of the shell	91
7.7	Radial loading $p_r = \beta_n \cos n\varphi$	92
7.8	Radial loading $p_r = \gamma_n \sin n\varphi$	94
7.9	Circumferential loading $p_\varphi = \vartheta_n \sin n\varphi$	95
7.10	Some more complex kinds of loading	97
7.10.1	Effect of a liquid with a free surface	97
7.10.2	Snow load	99
7.10.3	Vertical shells subjected to wind load	100
8	<i>Spherical shells</i>	101
8.1	Fundamental relations. Formulation of the problem	101
8.2	Solution of the problem	105
8.3	Liquid pressure	108
8.4	Uniform internal pressure	111
8.5	Weight of the shell	111
9	<i>Conical shells</i>	113
9.1	Fundamental relations. Formulation of the problem	113
9.2	Solution of the problem	115
9.3	Liquid pressure	117
9.4	Uniform internal pressure	118
9.5	Weight of the shell	118
10	<i>Thermoelastic membrane stresses</i>	120
10.1	Introductory remarks	120
10.2	Cylindrical shell	121
10.3	Spherical shell	122
10.4	Conical shell	124
11	<i>Applicability of the membrane theory</i>	125
<b>III Axisymmetric problems of the bending theory of elastic layered cylindrical shells</b>		
12	<i>Introductory remarks and basic assumptions</i>	128
13	<i>Formulation and general solution of the problem.</i>	130
13.1	Formulation of the problem	130
13.2	On the solution of a system of differential equations	134
13.3	Solution of the problem	137

14	<i>Limit processes for other types of fundamental systems</i>	143
15	<i>Derivatives of the members of fundamental systems</i>	147
16	<i>On the possibility of separating the membrane and bending states of stress</i>	151
17	<i>Generalized membrane state of stress</i>	158
17.1	On the relation to the membrane theory	158
17.2	Hydrostatic internal pressure	161
17.3	Uniform internal pressure and thermal stresses	163
17.4	General load	164
17.5	Concluding remarks	166
18	<i>Boundary disturbances in long shells</i>	168
18.1	Formulation of the problem	168
18.2	General solution of the problem	169
18.2.1	Simply supported edge	169
18.2.2	Clamped edge	170
18.2.3	Free edge	171
18.2.4	Intermediate support of a continuous beam	172
18.3	Hydrostatic internal pressure (17.19)	174
18.4	Uniform internal pressure and thermal stresses	174
18.5	General loading	175
18.6	Pressure vessels	175
18.7	Numerical examples on long shells	179
18.7.1	Example 1. Cylindrical vessel of asymmetric structure subjected to the effect of uniform internal pressure and temperature	179
18.7.2	Example 2. Effect of boundary disturbances at the junction of the cylinder and the hemispherical bottom	192
18.7.3	Example 3. Thermal stresses in a tempering test	193
19	<i>Boundary disturbances in short shells</i>	201
19.1	Shells supported at both ends	202
19.1.1	Simply supported shell	203
19.1.2	Clamped shell	206
19.1.3	Shells with clamped and simply supported edges	207
19.1.4	Continuous shell	208
19.2	Cantilever shell	209
19.3	Transition to a long shell	212
20	<i>Thermoelastic stresses in shells with temperature dependent moduli <math>E = E(T)</math>, <math>G = G(T)</math></i>	213
20.1	Introductory remarks and fundamental relations	213
20.2	Formulation and solution of the problem	217

#### IV General loading of elastic layered cylindrical shells

21	<i>Introductory remarks and basic relations</i>	223
22	<i>Formulation of the problem</i>	229
23	<i>General solution of the problem</i>	232
24	<i>Axisymmetric part of the solution</i>	234
24.1	Formulation and solution of the problem	234
24.2	Expressions for displacement and stress components	242

25	<i>Asymmetric part of the solution</i>	244
25.1	Formulation and solution of the problem	244
25.2	Expressions for displacement and stress components	266
26	<i>Final solution for the given shell</i>	268

## V Viscoelastic structures

27	<i>Introduction and notation</i>	269
27.1	Introductory notes	269
27.2	Character and notation of quantities	272
27.3	Further basic symbols	274
28	<i>Hereditary theory</i>	276
28.1	General form of constitutive equations	276
28.2	Fundamental equations for a viscoelastic body	282
28.3	General properties of material characteristics	291
28.4	Mean time constants	295
28.5	Effect of temperature	303
28.5.1	Material characteristics independent of temperature	303
28.5.2	Constant temperature	307
28.5.3	Variable temperature	314
28.5.4	Constitutive equations. Time-temperature analogy	315
29	<i>General formulation of the viscoelastic problem</i>	319
29.1	Basic assumptions	319
29.2	Working equations. Basic kinds of viscoelastic problems	320
29.3	Formulation of the thermo-viscoelastic problem in displacements	325
30	<i>On the possibility of separating variables</i>	327
31	<i>Elastic-viscoelastic analogy for homogeneous structures</i>	334
31.1	Introduction	334
31.2	General form of analogy in an isothermal case	338
31.3	Temperature dependent unit function responses. Non-isothermal problems	348
31.4	Effects of a series of time-shifted loadings	349
31.5	Viscoelastic homogeneous shells	349
31.5.1	Transition to homogeneous structure	349
31.5.2	Membrane theory of shells of revolution	352
31.5.3	Thermo-viscoelastic membrane stresses	354
31.5.4	Bending theory of cylindrical shells	355
31.5.5	Notes on practical calculations	367
32	<i>Constructions of layered structure</i>	369
32.1	Fundamental relations	369
32.2	Membrane theory of shells of revolution	373
32.3	Thermo-viscoelastic membrane stresses	374
32.4	Bending theory of cylindrical shells	375

## VI Complementary chapters

33	<i>Fourier series</i>	380
33.1	Introduction	380

33.2	Fourier expansions of some functions . . . . .	382
33.2.1	Expansion in the circumferential direction . . . . .	382
33.2.2	Expansion in the longitudinal direction . . . . .	384
33.3	Basic kinds of loading of shells . . . . .	384
33.3.1	Dead weight of horizontal shells . . . . .	385
33.3.2	Effect of liquid on horizontal shells . . . . .	385
33.3.3	Horizontal shells subjected to snow load . . . . .	386
33.3.4	Vertical shells subjected to wind load . . . . .	387
33.3.5	Effect of saddle support with horizontal shells . . . . .	390
34	<i>Simple rheological materials (bodies)</i> . . . . .	395
34.1	Two-parameter bodies . . . . .	396
34.2	Standard linear body . . . . .	400
34.3	Burgers body . . . . .	401
34.4	Identification of material . . . . .	403
35	<i>Schwartz distribution theory</i> . . . . .	407
35.1	Introduction . . . . .	407
35.2	General concept of a distribution . . . . .	408
35.3	Some basic concepts of distribution theory . . . . .	412
35.4	Operations on distributions . . . . .	417
35.4.1	Fundamental operations . . . . .	417
35.4.2	Differentiation of distributions . . . . .	419
35.4.3	Convolution . . . . .	421
35.4.4	Convolution equations . . . . .	423
35.4.5	Laplace transformation . . . . .	424
35.4.6	Two Abelian theorems . . . . .	426
References	. . . . .	429
Author index	. . . . .	435
Subject index	. . . . .	437
