

Handbook of Probability

Theory and Applications

Tamás Rudas Editor

Eötvös Loránd University, Budapest

 SAGE Publications
Los Angeles • London • New Delhi • Singapore

CONTENTS

Preface	xi
Advisory Board	xv
PART I: Background and Theory of Probability	1
1. History of Probability Theory	3
<i>Peter M. Lee</i>	
Preliminary Remarks	3
The 16th and 17th Centuries	4
The 18th Century	5
The 19th Century	7
The 20th Century	11
References	14
2. Frequentist Probability Theory	15
<i>Herwig Friedl and Siegfried Hörmann</i>	
Introduction and Basic Concepts	15
Random Variables and Distributions	21
Sequences of Independent Random Variables	29
References	34
3. Subjective Probability	35
<i>Igor Kopylov</i>	
Introduction	35
Subjective Probability and Betting Preferences	37
Subjective Expected Utility	40
Refining Subjective Probabilities: de Finetti's Theorem, Bayes's Law, Market Selection	43
Empirical Content of Subjective Probability	45
Summary	47
References	47
4. Paradoxes in Probability Theory	49
<i>Nicholas Shackel</i>	
Introduction	49
Weak Paradoxes	50
Strong Paradoxes	53
References	65

PART II: Probability Theory in Research Methodology	67
5. Probability Theory in Statistics	69
<i>Tamás Rudas</i>	
Introduction	69
The Fundamental Theorem of Mathematical Statistics	70
Methods of Estimation	71
Characterization and Comparison of Estimators	73
Asymptotic Behavior of Estimators	74
Confidence Intervals	75
Statistical Hypotheses	76
Decisions About the Hypothesis	78
The Neyman-Pearson Theory of Testing Hypotheses	79
The Likelihood Ratio Test	80
Some Testing Procedures	81
Some Practical Considerations	83
Further Reading	84
6. The Bayesian Approach to Statistics	85
<i>Anthony O'Hagan</i>	
Introduction	85
Bayesian Inference	85
Contrast With Frequentist Inference	91
Bayesian Statistics Today	95
Conclusion	99
References and Further Reading	99
7. Design of Experiments	101
<i>Mauro Gasparini and Maria Piera Rogantin</i>	
Experiments Differ From Observational Studies	101
A Perfect Experiment Is Comparative, Replicated, Not Confounded, Randomized, Blocked, and Optimal	102
A Response Is Explained in Terms of Predictors	105
Understanding Main Effects and Interactions	106
Interactions and Main Effects Are Tested and Estimated	108
An Example: Stress, Alcohol, and Blood Pressure	109
Social Experimentation Is Difficult	110
Experimentation and Society	111
References	112
8. Causation and Causal Inference: Defining, Identifying, and Estimating Causal Effects	113
<i>Michael Sobel</i>	
Introduction	113
Some Philosophical Considerations	113
Unit and Average Causal Effects	115
Identification and Estimation of Average Causal Effects	119
Discussion	126
References	127

9. Randomness and Computation	131
<i>Oded Goldreich</i>	
Introduction	131
Pseudorandomness	134
Probabilistic Proof Systems	139
Cryptography	144
Sublinear Time Algorithms	146
Further Reading	147
References	147
PART III: Applications	149
10. Time-Series Analysis	151
<i>Michael Anthony Lewis</i>	
Introduction	151
The Two Applications of Time-Series Analysis	153
Deterministic Time-Series Models	154
Random-Walk Model	156
Stationary and Nonstationary Time Series	157
Autoregressive Models	159
The Regression Approach to Times-Series	
Analysis and Intervention Models	160
Conclusion	162
References	162
11. Survival Analysis	163
<i>Nancy Brandon Tuma</i>	
Introduction	163
Key Concepts and Terms	163
Statistical Concepts	165
Survival Data	167
Exploratory Analyses	167
Confirmatory Analyses	174
Model Estimation	181
An Example of Confirmatory Survival Analysis	182
References	184
12. Probabilistic Sampling	187
<i>Jeffrey M. Wooldridge</i>	
Introduction	187
Random Sampling	188
Selected Sampling	190
Inverse Probability Weighting	194
Selection on Unobservables	197
Stratified Sampling	199
Cluster Sampling	201
References	203

13. Panel Studies	205
<i>Edward W. Frees and Jee-Seon Kim</i>	
Introduction	205
Accounting for Heterogeneity	209
Correlated Effects	213
Multilevel Models	217
Nonlinear Models	220
Historical Notes	221
References	222
14. Probabilistic Methods in Surveys and Official Statistics	225
<i>Vasja Vehovar, Matka Zaletel, and Rudi Seljak</i>	
Introduction	225
Major Official Sample Surveys	226
Selected Probabilistic Topics	229
Related Methodological Issues	232
Conclusion	237
References	238
15. Probabilistic Models of Measurement Errors	241
<i>Nicholas T. Longford</i>	
Introduction	241
Measurement Process	243
Connection to Missing Data Methods	244
Impartiality and Regression	248
Other Methods and Processes	249
Design Issues	251
Applications	251
Discussion	254
References	254
16. Statistical Models for the Development of Psychological and Educational Tests	257
<i>Klaas Sijtsma and Wilco H. M. Emons</i>	
Introduction	257
Assumptions of Item Response Theory	259
Special Cases of (M, LI, $D = 1$) Models	260
Comparing IRT Models	267
A Practical Data Example: Arithmetic of Proportions and Ratios	269
Discussion	272
References	273
17. Probabilistic Simulation Models of Society	277
<i>Klaus G. Troitzsch</i>	
Introduction	277
A Short Taxonomy of Stochastic Processes	277
The Classical Approach: Microanalytical Simulation Models	278
Multilevel Models	282
Multi-Agent Models	287
References	290

18. Probabilistic Network Analysis	291
<i>Philippa Pattison and Garry Robins</i>	
Introduction	291
Social Networks	291
What Is Distinctive About Models for Social Networks?	291
Notation and Some Basic Properties of Graphs and Directed Graphs	292
Simple Random Graphs and Directed Graphs	296
Applications of Random Graph and Directed Graph Distributions to Social Network Data	298
Biased Nets	299
The p_1 Model	299
Latent Variable Models	300
Markov Random Graphs	301
Realization-Dependent Models	308
Extensions	310
Conclusion	310
References	310
19. Gambling	313
<i>Chas Friedman</i>	
Introduction	313
History and Origins	313
Probability and Applications	314
Gambling in the Long Run	322
References	327
20. Insurance	329
<i>Richard A. Derrig and Krzysztof Ostaszewski</i>	
Introduction	329
Insurance Pricing Fundamentals	330
Reserves	335
Asset-Liability Management	337
Insurance Pricing Models	339
Policyholder Demand Side Model	339
Shareholder Supply Side Model	339
Summary	341
References	341
21. Credit Scoring	343
<i>Ad Feelders</i>	
Introduction	343
Formal Statement of the Problem	343
The Data	344
Linear Regression	344
Logistic Regression	344
Latent Variable Formulation	348
Model Selection and Model Evaluation	350
Reject Inference	354
Summary	361
References	362
