Contents

FOREWORD	vii
CHAPTER 1. BASIC CHARACTERISTICS OF SEDIMENTS	1
1. River Flows with Sediments	1
2. Characteristics of Sediments and Stream Materials	5
3. Change in Coarseness of Sediment Particles along the Length of the River	9
4. Classification of Sediments	17
CHAPTER 2. FACTORS AFFECTING THE MOVEMENT OF SEDIMENTS	27
1. Movement of Sediment Particles in the Stream	27
2. Effect of Properties of the Sediment Material on its Movement	28
3. Effect of Hydraulic Characteristics of Flow on Sediment Movement	33
CHAPTER 3. THEORETICAL BASIS OF A NORMAL LAW OF DISTRIBUTION APPROPRIATE TO THE CALCULATION OF GRANULOMETRIC COMPOSITION OF SEDIMENTS	39
1. Review of Some Publications on the Calculation of Granulometric Composition of Fragmented Material	39
2. Theoretical Basis for Application of the Normal Law of Distribution to Calculate the Granulometric Composition of Sediments	43
3. Polygenic and Monogenic Sediments, Nonhomogeneity Coefficient	47
CHAPTER 4. STUDIES ON FALL VELOCITY OF SEDIMENTS	58
1. Analysis of Studies on Fall Velocity of Sediments	58

2. Methods of Calculating Fall Velocity of Particles	77
3. Mean Fall Velocities of Particles	87
CHAPTER 5. USE OF STATISTICAL METHODS IN DISTRIBUTION OF FALL VELOCITY	98
1. Distribution of Fall Velocity of Sediment Particles	99
2. Use of Statistical Methods for Determining Mean Fall Velocity of Sediments	114
3. Analysis of Distribution Patterns of Fall Velocity for Sediment Particles	127
4. Generalization of the Law of Distribution of Fall Velocity	132
CHAPTER 6. DEPTHWISE DISTRIBUTION OF VELOCITIES AND TURBIDITIES IN TURBULENT FLOWS	135
1. Distribution of Velocities	135
2. Analysis of Parameters in Formulas for Distribution of Velocities	144
3. Analysis of Formulas for Vertical Distribution of Sediment Concentration	153
4. Effect of Distribution of Velocity on Depthwise Distribution of Turbidity	181
5. Statistical Method of Calculating Vertical Distribution of Turbidity in Turbulent Flow	186
6. Comparison of Results of Calculations on the Vertical Distribution of Turbidity with Experimental Data	198
CHAPTER 7. RESISTANCES IN OPEN CHANNELS	208
1. State and Movement of Streams	208
2. Form of Stream Channel Bed and Stream Regime.	211
3. Effect of Channel Shape on Resistance	212
4. Resistance in Alluvial Channels	218
5. Effect of Sediments on Resistance to Flow in a Channel	229
6. Resistance Created by Vegetation Cover	233

CHAPTER 8. ENERGY DISTRIBUTION PATTERN IN TRANSVERSE SECTION OF FREE FLOW . . .	243
1. Theory of Energy Distribution in Transverse Section of Stream	243
2. Effect of Velocity Distribution on Energy Distribution in Cross Section of Free Surface Flow	255
CHAPTER 9. APPLICATION OF THE THEORY OF ENERGY TRANSFER TO THE SOLUTION OF PRACTICAL PROBLEMS.	267
1. Criterion of Flow Transition from Turbulent to Superturbulent State	267
2. Application of Theory of Energy Transfer to Natural Streams	271
3. Determination of the Rate of Movement of Water in Channels under Sludge Conditions	273
4. Study of the Boundary Layer	276
5. Determination of Rate of Flow for Complete Suspension of Sediments	278
CHAPTER 10. BED LOADS.	284
1. Problems in Sediment Transport	284
2. Conditions and Criterion of Movement of Sediments	286
3. Movement of Individual Sediment Particles in a Turbulent Flow	294
4. Development of Theory of Sediment Movement according to the Data of Foreign Scientists	302
5. Generalized Method of Calculating Discharge of Bed Load	330
6. Comparison of Suggested Formula with Formulas of Other Authors	336
