

NOTES ON THE
THEORY OF CHOICE

DAVID M. KREPS

A Member of the Perseus Books Group

Contents

Preface	xiii
1. Introduction	1
Normative Applications	4
Descriptive Applications	5
Problems	6
2. Preference Relations and Revealed Preference	7
Binary Relations	7
Preference Relations	8
Revealed Preference Theory	11
Concluding Remarks	15
Problems	16
3. Ordinal Utility	19
Finite X	19
Countably Infinite X	22
Uncountable X	24
Uniqueness	26
Bells and Whistles	26
Problems	28
4. Choice Under Uncertainty:	
Formulations and Representations	31
NM Models	32
Savage Style Models	33
Anscombe–Aumann	38
Problems	39
5. von Neumann-Morgenstern Expected Utility	43
Finite Prize Spaces	43
The Mixture Space Theorem	52
Simple Probability Distributions	57
Non-simple Probability Measures and the Sure-thing Principle	59

Bounded Utility	63
Continuity	65
Problems	68
6. Utility Functions for Money	71
Basic Properties and Definitions	71
Decreasing, Increasing, and Constant Risk Aversion	74
Comparison of the Risk Aversion of Two Totreps	77
Proof of Theorem (6.7)	80
Relative Risk Aversion	81
Normative Uses of These Properties	82
On Descriptive Applications and "Stronger Measures of Risk Aversion"	88
Problems	92
7. Horse Race Lotteries and Roulette Wheels	99
The Choice Set	100
<i>H</i> as a Mixture Space	102
First Roulette and then the Horses	105
State Dependent and State Independent Utility	108
Problems	111
8. Subjective Probability	115
Probability Measures	116
Qualitative Probability	117
Basics of the Savage Approach	120
Fine and Tight Qualitative Probabilities	122
The Savage Theory	124
Problems	125
9. Savage's Theory of Choice Under Uncertainty	127
The Savage Formulation	127
The Seven Savage Axioms	128
The Savage Development	132
Problems	136
10. Conditional Preference, Conditional Probability, and Contingent Choice	139
Conditional Preference and Conditional Probability	139

Choosing an Action Contingent Upon New Information	141
Problems	144
11. Independence, Exchangeability, and de Finetti's Theorem	145
Some Bedtime Reading	145
de Finetti's Theorem	157
de Finetti's Theorem as the Fundamental Theorem of (Most) Statistics	159
Bayesian Inference and de Finetti's Theorem As Normative Decision Tools	160
Unanimous Priors	162
Problems	163
12. Normative Uses of These Models on Subproblems	165
The Basic Problem	166
Variation #1: Statistical Dependence Between x and y	167
Variation #2: Discretion as to y	169
Variation #3: Temporal Resolution of Uncertainty	171
Summary	175
Problems	176
13. Dynamic Choice Theory and the Choice of Opportunity Sets	181
Basic Setup	181
The Standard Model	183
Changing Tastes and Sophisticated Choice	185
Preference for Flexibility	187
Discussion	189
Problems	190
14. The Experimental Evidence	191
The Allais Paradox	192
The Ellsberg Paradox	195
Framing Effects	196
Summary	198
Problems	198
References	201
Index	205
