Artificial Intelligence
Using C

Herbert Schildt

Osborne McGraw-Hill
Berkeley, California
CONTENTS

Preface ix

CHAPTER 1 Artificial Intelligence: A Quick Overview 1
A Short History of AI
Can Computers Think?
Defining Machine Intelligence
AI's Major Topics
Why Use C for AI Programming?
Databases, Backtracking, and List Processing

CHAPTER 2 Problem Solving: The Search for Solutions 19
Representation and Terminology
Combinatorial Explosions
Search Techniques
Evaluating a Search
The Depth-First Search Technique
The Breadth-First Search Technique
Adding Heuristics
The Hill-Climbing Search Technique
The Least-Cost Search Technique
Choosing a Search Technique
Finding Multiple Solutions
Finding the Optimal Solution
Back to the Missing Keys

CHAPTER 3 Expert Systems 71
What Is an Expert System?
How Expert Systems Work
Creating a General-Purpose Expert System
A More Sophisticated Version
Knowledge Engineering

CHAPTER 4 Natural-Language Processing 117
What Is Natural-Language Processing?
Approaches to Natural-Language Processing
Restricting Language
The State-Machine NLP Parser
The Context-Free Recursive-Descent NLP Parser
The Noise-Disposal Parser

CHAPTER 5 Vision and Pattern Recognition 161
Filtering, Contrast, and Shading
Two-Dimensional Systems
Three-Dimensional Systems
Common Recognition Problems
Two-Dimensional Pattern Recognition
Generalized Systems

CHAPTER 6 Robotics 207
Robot Arms
The Industrial Robot
Autonomous Robots
Creating a Robot Simulator

CHAPTER 7 Machine Learning 239
Two Kinds of Learning
How Class Descriptions Are Learned
Knowledge Representation
Implementing the Hit-and-Near-Miss Procedure
