

Dynamic Programming and Optimal Control

Volume I

SECOND EDITION

Dimitri P. Bertsekas

Massachusetts Institute of Technology

Technische Universität Darmstadt
FACHBEREICH INFORMATIK

B I B L I O T H E K

Inventar-Nr.: 404-00037

Sachgebiete: _____

Standort: _____

Athena Scientific, Belmont, Massachusetts

Contents

1. The Dynamic Programming Algorithm

1.1. Introduction	p. 2
1.2. The Basic Problem	p. 12
1.3. The Dynamic Programming Algorithm	p. 18
1.4. State Augmentation	p. 34
1.5. Some Mathematical Issues	p. 39
1.6. Notes, Sources, and Exercises	p. 44

2. Deterministic Systems and the Shortest Path Problem

2.1. Finite-State Systems and Shortest Paths	p. 58
2.2. Some Shortest Path Applications	p. 62
2.2.1. Critical Path Analysis	p. 62
2.2.2. Hidden Markov Models and the Viterbi Algorithm	p. 64
2.3. Shortest Path Algorithms	p. 70
2.3.1. Label Correcting Methods	p. 74
2.3.2. Auction Algorithms	p. 84
2.4. Notes, Sources, and Exercises	p. 90

3. Deterministic Continuous-Time Optimal Control

3.1. Continuous-Time Optimal Control	p. 98
3.2. The Hamilton-Jacobi-Bellman Equation	p. 101
3.3. The Pontryagin Minimum Principle	p. 107
3.3.1. An Informal Derivation Using the HJB Equation	p. 107
3.3.2. A Derivation Based on Variational Ideas	p. 116
3.3.3. Minimum Principle for Discrete-Time Problems	p. 121
3.4. Extensions of the Minimum Principle	p. 123
3.4.1. Fixed Terminal State	p. 123
3.4.2. Free Initial State	p. 126
3.4.3. Free Terminal Time	p. 127
3.4.4. Time-Varying System and Cost	p. 130
3.4.5. Singular Problems	p. 131

3.5. Notes, Sources, and Exercises	p. 132
4. Problems with Perfect State Information	
4.1. Linear Systems and Quadratic Cost	p. 140
4.2. Inventory Control	p. 154
4.3. Dynamic Portfolio Analysis	p. 162
4.4. Optimal Stopping Problems	p. 168
4.5. Scheduling and the Interchange Argument	p. 178
4.6. Set-Membership Description of Uncertainty	p. 182
4.6.1. Set-Membership Estimation	p. 183
4.6.2. Control with Unknown-but-Bounded Disturbances	p. 189
4.7. Notes, Sources, and Exercises	p. 193
5. Problems with Imperfect State Information	
5.1. Reduction to the Perfect Information Case	p. 210
5.2. Linear Systems and Quadratic Cost	p. 221
5.3. Minimum Variance Control of Linear Systems	p. 228
5.4. Sufficient Statistics and Finite-State Markov Chains	p. 243
5.5. Sequential Hypothesis Testing	p. 256
5.6. Notes, Sources, and Exercises	p. 261
6. Suboptimal Control	
6.1. Certainty Equivalent and Adaptive Control	p. 271
6.1.1. Caution, Probing, and Dual Control	p. 277
6.1.2. Two-Phase Control and Identifiability	p. 278
6.1.3. Certainty Equivalent Control and Identifiability	p. 280
6.1.4. Self-Tuning Regulators	p. 286
6.2. Open-Loop Feedback Control	p. 287
6.3. Limited Lookahead Policies and Applications	p. 291
6.3.1. Performance Bounds of Limited Lookahead Policies	p. 293
6.3.2. Computational Issues in Limited Lookahead	p. 294
6.3.3. Problem Approximation – Enforced Decomposition	p. 297
6.3.4. Heuristic Cost-to-Go Approximation	p. 303
6.4. Rollout Algorithms	p. 314
6.4.1. Discrete Deterministic Problems	p. 321
6.4.2. Q -Factors Evaluated by Simulation	p. 339
6.4.3. Q -Factor Approximation	p. 341
6.5. Additional Topics in Suboptimal Control	p. 344
6.5.1. Rolling Horizon Approximations	p. 344
6.5.2. Discretization	p. 346
6.5.3. Other Approximation Approaches	p. 348
6.6. Notes, Sources, and Exercises	p. 350

7. Introduction to Infinite Horizon Problems

7.1. An Overview	p. 362
7.2. Stochastic Shortest Path Problems	p. 365
7.3. Discounted Problems	p. 377
7.4. Average Cost Problems	p. 381
7.5. Semi-Markov Problems	p. 395
7.6. Notes, Sources, and Exercises	p. 404

Appendix A: Mathematical Review

A.1. Sets	p. 413
A.2. Euclidean Space	p. 414
A.3. Matrices	p. 415
A.4. Analysis	p. 419
A.5. Convex Sets and Functions	p. 421

Appendix B: On Optimization Theory

B.1. Optimal Solutions	p. 423
B.2. Optimality Conditions	p. 424
B.3. Minimization of Quadratic Forms	p. 426

Appendix C: On Probability Theory

C.1. Probability Spaces	p. 427
C.2. Random Variables	p. 428
C.3. Conditional Probability	p. 430

Appendix D: On Finite-State Markov Chains

D.1. Stationary Markov Chains	p. 433
D.2. Classification of States	p. 434
D.3. Limiting Probabilities	p. 435
D.4. First Passage Times	p. 436

Appendix E: Kalman Filtering

E.1. Least-Squares Estimation	p. 437
E.2. Linear Least-Squares Estimation	p. 439
E.3. State Estimation – The Kalman Filter	p. 447
E.4. Stability Aspects	p. 452
E.5. Gauss-Markov Estimators	p. 455
E.6. Deterministic Least-Squares Estimation	p. 457

Appendix F: Modeling of Stochastic Linear Systems

F.1. Linear Systems with Stochastic Inputs p. 459
F.2. Processes with Rational Spectrum p. 460
F.3. The ARMAX Model p. 462

Appendix G: Formulating Problems of Decision Under Uncertainty

G.1. The Problem of Decision Under Uncertainty p. 463
G.2. Expected Utility Theory and Risk p. 467
G.3. Stochastic Optimal Control Problems p. 480

References p. 485

Index p. 499
