Essentials of Production and Operations Management

EHUD MENIPAZ

B.Sc.Eng., M.Sc.Eng., M.B.A., Ph.D., P.E.
Professor
Carleton University

00226707

TECHNISCHE HOCHSCHULE DARMSTADT
Fachbereich 1
Gesamtbibliothek
Betriebswirtschaftslehre
Inventar-Nr. : 36.574
Abstell-Nr. : A25/491
Sachgebiete: 1.6.0
4

Prentice-Hall, Inc., Englewood Cliffs, New Jersey 07632

Contents

Preface xii

Part One: Introduction

1 OPERATIONS SYSTEMS AND DECISION PROCESSES 1

A Short Chronology 4
Operations Management 4
Objectives of Operations Systems 9
The Impact of Operations Research 11
The Systems Approach 13
The Operations System 15
The Management of Operations Systems 16
Modeling and Managerial Decision Process 17
Modeling Techniques 19
The Use of Computers 20
Decision Situations in Operations Management 21
Summary 26
Discussion Questions 27
Problems and Solutions 28
Chapter Review Problems 29
Reading: *The Risk Analysts* 31
Bibliography 32

Part Two: Design

2 PRODUCT AND PROCESS DECISION AND DESIGN 34

Introduction 34
The Product Life Cycle 35
New Product Decision and Design 36
Exploration and Idea Generation 36
Screening 37
Economic Analysis 40
Research and Development 43
Testing 46
Commercialization 49
Process Decision and Design 50
Characteristics of a Process 55
Capacity of a Facility 57
Summary 60
Discussion Questions 61
Problems and Solutions 61
Chapter Review Problems 63
Reading: *Business To Hike R & D Spending 17%* 63
Reading: *The String of Flops That Clogged Water Pik* 64
Bibliography 65
TECHNICAL NOTE: Capital Budgeting and Financial Investment Analysis 64
Introduction 67
Present Value of a Single Payment 69
Present Value of an Annuity 70
Payback Period 71
Payback Reciprocal 72
Net Present Value (NPV) Method 72
Summary 77
Technical Note Problems 77

3 FACILITY LOCATION 81

Introduction 81
Facility Location Factors 82
Steps in the Facility Location Study 83
Common Errors in Facility Location Analysis 89
Facility Location—Industrial Case 89
Facility Location Models 93
The Median Model 94
The Distribution Model 97
The Simulation Model 99
The Heuristic Model 100
Behavioral Aspects of Facility Location 106
Summary 107

Discussion Questions 108
Problems and Solutions 108
Chapter Review Problems 111
Reading: *Too Many Lunches* 112
Bibliography 113
TECHNICAL NOTE: The Distribution Model of Linear Programming 114
Introduction 114
Essentials of the Distribution Method 115
The American Paper Box Case 124
Technical Note Problems 128
Bibliography 131

4 PROJECT PLANNING AND MANAGEMENT 132

Introduction 132
Routine Planning versus Project Planning 133
Models for Project Planning 134
PERT and CPM Analysis Procedure 138
Controlling Projects by PERT and CPM 145
Activity Time Estimates for PERT 146
Expected Time Calculation 147
Project Risks Using PERT 147
Cost and Time Tradeoffs Using CPM 150
PERT/COST 155
Project Productivity 156
Computers in Project Management 157
Summary 158
Discussion Questions 158
Problems and Solutions 161
Chapter Review Problems 166
Bibliography 171

Part Three: Planning

5 FORECASTING FOR OPERATIONS 173

Introduction 173
Types of Forecasts 174
Demand Forecasting and Prediction 175
Factors Affecting Demand 175
Independent and Dependent Demand 176
Forecasting Methods 177
Qualitative Techniques 177
Time Series Analysis and Projection Techniques 186
Forecasting Techniques—Causal Models 203
Effectiveness of Forecasting Techniques 208

Choosing a Forecasting Technique 214
Developing a Workable Forecasting System 216
Computerized Forecasting Models 217
Summary 219
Discussion Questions 220
Problems and Solutions 220
Chapter Review Problems 226
Reading: *Why Forecasters Really Blew It in 1982* 231
Bibliography 232

6 AGGREGATE PLANNING 234

Introduction 234
The Nature of Aggregate Planning 234
Decision Options 235
Aggregate Planning Costs 237
Aggregate Planning Strategies 237
Graphic and Charting Methods for Aggregate Planning 238
Mathematical Methods
The Transportation Method 246
Linear Decision Rules 247
Other Aggregate Planning Methods 252
The Use of Aggregate Planning Methods 254
Summary 255
Discussion Questions 255
Problems and Solutions 256
Chapter Review Problems 260
Bibliography 264
TECHNICAL NOTE: Linear Programming 265
Introduction 265
Formulation of the Linear Programming Problem 266
The Graphical Solution Method of the Linear Programming Problem 268
The Simplex Solution Method of the Linear Programming Problem 272
The Simplex Procedure 273
Treatment of Irregularities 279
Shadow Prices 281
Technical Note Problems 281
Bibliography 284

7 FACILITY LAYOUT 287

Introduction 287
Technology, Capacity, and Layout Planning: An Industrial Case 288
Operation Types 292
Layout Types 293
Layout Design Comparison 296
Essentials of Layout Analysis 296

Computer Models for Process Layout 304
Other Aspects of Process Layout Analysis 306
An Industrial Case: Relayout and Location of a High-Speed N/C Turret Punch Press 312
Product Layout Analysis 315
Line Balancing 316
Computer Model for Line Balancing 321
Summary 326
Discussion Questions 327
Problems and Solutions 327
Chapter Review Problems 332
Reading: *La Jolla: A Nice Place for Signal to Weather Recession Problems* 337
Bibliography 338

8 OPERATIONS SCHEDULING 341

Introduction 341
Scheduling for Continuous, High-Volume Systems 342
Scheduling for Intermittent, Low-Volume Systems 350
Single Facility Schedule 351
Scheduling of Service Operations 362
Summary 367
Discussion Questions 368
Problems and Solutions 368
Chapter Review Problems 374
Bibliography 378
TECHNICAL NOTE: Essentials of Simulation 380
Introduction 380
Monte Carlo Simulation 381
Generating Random Numbers 383
Case: Simulating an Outpatient Clinic 386
Simulation with Continuous Probability Distribution 390
Computer Simulation 392
Simulation and Operations Management 392
Applications of Simulation 393
Summary 394
Technical Note Problems 395
Bibliography 404

Part Four: Organizing Work Systems

9 JOB DESIGN AND ANALYSIS 407

Introduction 407
Specialization and Job Design 408
Job Analysis 413

Summary 428
Discussion Questions 428
Problems and Solutions 429
Chapter Review Problems 431
Reading: *France Makes Renault Its Model* 432
Bibliography 434

10 WORK MEASUREMENT AND COMPENSATION 436

Introduction 436
Direct Time Study—Intensive Sampling 441
Direct Time Study—Extensive Sampling 449
Steps in the Work-Sampling Procedure 450
Predetermined Time Standards 454
Compensation 456
Summary 464
Discussion Questions 464
Problems and Solutions 464
Chapter Review Problems 466
Bibliography 467

Part Five: Control

11 INVENTORY MANAGEMENT AND CONTROL 470

Introduction 470
Inventory: Definitions 471
Inventory Functions 472
Inventory Systems: A Conceptual Framework 473
The Inventory Decision 475
Inventory Costs 477
Cost Tradeoffs: Minimum Cost Inventory 480
The Basic Fixed Order Quantity Model 482
Fixed Order Quantity with Noninstantaneous Delivery Model 487
Fixed Order Quantity with Discounts Model 490
Fixed Order Quantity with Backorders Model 492
Periodic Reorder Models 494
Stochastic Inventory Models 496
Safety Stock 497
ABC Classifications 500
Computerized Inventory Systems 502
Computerized Interactive Inventory Systems 505
Summary 506
Discussion Questions 510
Problems and Solutions 510
Chapter Review Problems 514

Reading: *U.S. Automakers See Future in Kanban* 518
Bibliography 520

12 MATERIAL REQUIREMENTS PLANNING 523

An Introduction 523
An Overview of Material Requirements Planning (MRP) 523
An Example of the Use of MRP 528
MRP Processing Procedure 533
Lot Sizing in MRP 536
MRP as an Information System 537
MRP as a Scheduling System 538
Closed-Loop MRP and MRP II 538
Computerized MRP Systems 541
Summary 547
Discussion Problems 552
Problems and Solutions 553
Chapter Review Problems 554
Reading: *The Nuts and Bolts of Japan's Factories* 555
Bibliography 558

13 QUALITY CONTROL 651

Introduction 561
The Scope of Quality Control 562
Historical Perspective 564
Product Liability and Quality Control 564
Responsibility for Quality 565
Quality-Control Procedures 569
Sequential Sampling Plan 575
Sampling Plans' Manuals 577
Control Charts for Process Control 586
Human Factors in Quality Control 596
Quality Control in the Service Industries 597
Computers in Quality Control 601
Common Problems in Applying Quality-Control Systems and Procedures 604
Summary 609
Discussion Questions 611
Problems and Solutions 611
Chapter Review Problems 615
Bibliography 618

14 MAINTENANCE 619

Introduction 619
Maintenance Function Objectives 620
The Place of the Maintenance Function in the Organization Structure 621

Equipment Replacement Analysis 622
Maintenance Costs and Losses 624
Call Maintenance and Preventive Maintenance 626
Preventive Maintenance 628
Justifying a Preventive Replacement 632
Determining the Frequency of Preventive Replacement 635
Computerized Maintenance Information System 639
Systems Approach in Maintenance Management—Terotechnology 641
Summary 646
Discussion Questions 647
Problems and Solutions 647
Chapter Review Problems 648
Bibliography 649
TECHNICAL NOTE: Waiting Lines 650
Introduction 650
The Structure of Waiting Lines 650
Costs 652
Mathematical Representation 654
The Single-Facility Waiting Line 656
Multichannel Waiting Lines 659
Finite Population Waiting Lines 661
Waiting Lines with a Maximum Line Length 663
Waiting Lines with a Constant Service Time and Poisson Arrivals 664
Serial Waiting Lines 667
Summary 668
Technical Note Problems 668
Bibliography 670

Part Six: Summary

15 ENHANCING PRODUCTIVITY: PUTTING THE ESSENTIALS TO WORK 671

Introduction 671
Productivity and Production/Operations Management 671
Measuring Productivity 675
Productivity Improvement and Systematic Industrial Development Approach 677
The System Approach to Operations Management 678
People and Productivity 679
Services and Operations Management 679
Resource Management Approach 681
Computers and Operations Management 681
Industrial and Operations Management: The Future 682
Summary 683
Discussion Questions 684
Reading: *Training Bosses* 684

Reading: *Now Hear This: Full Ahead* 686
Bibliography 687

APPENDIX 689

Table A Cumulative Probabilities for the Normal Probability Distribution 689
Table B Present Value of a Single Payment 691
Table C Present Value of an Annuity 693
Table D Learning Curve Coefficients 695
Table E Table of Random Numbers 696

INDEX 697
