Contents

Introduction and acknowledgements	<i>Page</i> vii
1 The free surface at rest	1
1.1 Hydrostatic pressure	2
1.2 Hydrostatic force calculation	4
1.3 Stability of floating objects	12
References	19
Symbols	19
2 Steady flows in channels	20
2.1 Flow energy and force in rectangular channels	21
2.2 Flow through other shapes of cross-section	44
2.3 Conduit resistance and steady free-surface flow	53
2.4 Gradually varied flow	58
References	68
Symbols	69
3 Unsteady but largely kinematic flows	71
3.1 Exact solution for kinematic routing	71
3.2 Numerical method for level-pool routing	74
3.3 Kinematic channel routing	75
References	79
Symbols	79
4 Shallow-water transients	81
4.1 Equations of motion – the method of characteristics	81
4.2 Characteristics applied at a sluice gate	85
4.3 Non-rectangular sections	86
4.4 Numerical integration	89
4.5 Attenuation caused by interpolation	91
4.6 Examples of numerical attenuation	93
4.7 Other boundary conditions	95
4.8 Discharge variation from uniform flow	97

4.9	Direct finite differences	100
4.10	Supercritical flow	103
4.11	The bore condition	105
4.12	Bore inception	108
4.13	Bore in a non-rectangular section	110
4.14	Bore generated by boundary displacement	111
4.15	Dam-break flow	113
4.16	Roll waves	115
	References	118
	Symbols	119
5	Oscillatory water waves	121
5.1	Standing and progressive waves	121
5.2	The linearized wave equation	123
5.3	Seiche action in a harbour	124
5.4	Flow curvature	129
5.5	Airy's theory summarized	130
5.6	Results and limitations of Airy's theory	133
5.7	Refraction, reflection and diffraction	138
5.8	Breaking and waves of finite height	147
5.9	Wave-height prediction from wind	150
5.10	Harmonic and dynamic theories of ocean tides	156
5.11	Simulation of shallow-water waves in x - y - t space	167
	References	176
	Symbols	178
6	The partially free surface	180
6.1	Introduction and jet flows	180
6.2	Bubble and droplet mechanics	186
6.3	Air entrainment by free-surface flow	190
6.4	Long-cavity flows	200
6.5	Circulation, vorticity and the air-entraining vortex	210
	References	217
	Symbols	218
