

INTERNATIONAL CENTRE FOR MECHANICAL SCIENCES

COURSES AND LECTURES - No. 272

IDENTIFICATION
OF
VIBRATING STRUCTURES

EDITED BY
H.G. NATKE
UNIVERSITY OF HANNOVER

SPRINGER - VERLAG

WIEN - NEW YORK

CONTENTS

	Page
<i>Identification of vibrating structures: an introduction</i> by H.G. Natke	1
<i>Multi-degree-of-freedom systems – a review</i> by H.G. Natke	15
<i>Introduction to system identification using parameter estimation methods</i> by H. Unbehauen	53
<i>Some identification methods using measured harmonic responses</i> by R. Fillod	121
<i>Identification methods II – concepts and techniques</i> by E. Breitbach	147
<i>Indirect identification methods I: adjustment of mathematical models by the results of vibrating tests: using eigensolutions</i> by G. Lallement	179
<i>Correction of analytical models for damped linear systems using experimentally obtained forced vibration responses</i> by H.P. Felgenhauer	195
<i>Indirect methods: correction of the results of system analysis by results of identification – a survey</i> by H.G. Natke	225
<i>Application of system identification with commercially available hardware and software</i> by P. Catchpole	257
<i>Modal synthesis – modal correction – modal coupling</i> by E. Breitbach	321
<i>Linearized error analysis in synthesis techniques</i> by H.G. Natke	349
<i>Identification of nonlinear systems</i> by E. Breitbach	373
<i>Some modern developments in system identification using parameter estimation methods</i> by H. Unbehauen	405

<i>Modern methods of covariance analysis and applications</i> by W. Wedig	445
<i>Integration of nonlinear stochastic systems and applications to the crack identification</i> by W. Wedig	473
<i>Stochastic systems with distributed parameters</i> by W. Wedig	493
