Contents

Series editor's preface	xii
Preface	xiii
Part I Introduction	1
1 Object-oriented software development	3
1.1 Introduction	3
1.2 Seamlessness	7
1.3 Reversibility	7
1.4 Software contracting	9
2 The BON approach	11
2.1 Introduction	11
2.2 What is not in BON	12
2.3 Other methods	15
2.4 The BON position	16
2.5 Characteristics of the notation	17
2.6 Static and dynamic models	24
Part II The model	27
3 The static model—classes and clusters	29
3.1 Introduction	29
3.2 BON modeling charts	30
3.3 System state information	35
3.4 Typed class interfaces	36
3.5 Class header	37
3.6 Indexing clause	37

3.7	Inheritance clause	39
3.8	Class features	39
3.9	Class invariant	47
3.10	Graphical and textual specification	48
3.11	The BON assertion language	49
3.12	The BON predicate logic	52
3.13	Assertions and partial functions	57
3.14	Scalable system description	59
3.15	Class headers	59
3.16	Clusters	60
4	Static relations	65
4.1	Inheritance relations	65
4.2	Client relations	69
4.3	Class vs. object dependencies	86
4.4	Indirect client dependencies	88
4.5	Semantic links	89
5	The dynamic model	90
5.1	Introduction	90
5.2	Dynamic charts	93
5.3	Dynamic diagrams	99
Part III	The method	117
6	Issues of a general method	119
6.1	Introduction	119
6.2	Simulating an ideal process	120
6.3	Enterprise modeling	121
6.4	What is analysis and what is design?	122
6.5	Reuse	125
6.6	User centered design	129
6.7	Roles of analysis objects	135
6.8	Modeling a system interface	136
6.9	System usage	140
6.10	A paradigm shift	142

7 The BON process	143
7.1 The BON deliverables	143
7.2 Characteristics of the process	148
7.3 Task 1: Delineate system borderline	152
7.4 Task 2: List candidate classes	160
7.5 Task 3: Select classes and group into clusters	162
7.6 Task 4: Define classes	166
7.7 Task 5: Sketch system behaviors	168
7.8 Task 6: Define public features	171
7.9 Task 7: Refine system	172
7.10 Task 8: Generalize	174
7.11 Task 9: Complete and review system	175
8 BON standard activities	178
8.1 Finding classes	178
8.2 Classifying	189
8.3 Clustering	194
8.4 Defining class features	198
8.5 Selecting and describing object scenarios	203
8.6 Working out contracting conditions	205
8.7 Assessing reuse	212
8.8 Indexing and documenting	215
8.9 Evolving the system architecture	220
Part IV Case studies	229
9 A conference management system	231
9.1 System borderline	232
9.2 Candidate classes in the problem domain	235
9.3 Class selection and clustering	236
9.4 Class definition	242
9.5 System behavior	252
9.6 Formal class description	260
10 A video recorder	270
10.1 System borderline	270

10.2	Candidate classes	274
10.3	Class selection and clustering	275
10.4	Class definition	279
10.5	System behavior	283
10.6	Formal class description	286
10.7	Final static architecture	288
11	Relational and object-oriented coexistence	289
11.1	From data storage to object persistence	290
11.2	Object models and relational models	293
11.3	A relational database wrapper	295
11.4	Interfacing an existing relational schema	303
11.5	Querying a persistent object model	312
11.6	Persistent object management	315
11.7	Automatic generation of SQL statements	324
11.8	Full static architecture	331
12	Exercises	332
12.1	Clustering a problem domain	332
12.2	Defining class relationships	334
12.3	Assertions and classification	335
12.4	Dynamic behavior	336
12.5	Prescription and description	337
12.6	Traffic-control system	338
12.7	Dice game	339
12.8	Car rental company	340
12.9	Truck freight	341
12.10	Real-time process control	345
Part V	Appendices	347
Appendix A	BON textual grammar	349
A.1	Introduction	349
A.2	The syntax notation	350
A.3	BON specification	352
A.4	Informal charts	352

A.5	Static diagrams	354
A.6	Class interface description	355
A.7	Formal assertions	357
A.8	Dynamic diagrams	358
A.9	Notational tuning	359
A.10	Lexical components	359
Appendix B	BON textual examples	364
B.1	BON specification	364
B.2	Informal charts	365
B.3	Static diagrams	367
B.4	Dynamic diagrams	374
Appendix C	BON quick reference	381
Appendix D	Other approaches	386
Appendix E	Glossary of terms	388
