Contents

List of figures and tables	<i>page</i>	ix
Preface		xi
Acknowledgments		xiii
1. Preliminaries		1
1.1. Information structures		1
1.2. Decision rules or strategies		4
1.3. Market outcomes		5
1.4. Imperfect versus incomplete information		8
1.5. Organization and information		10
1.6. Cognitive dissonance		12
1.7. Outline of the book		13
Part I. Statics		
2. Asymmetric price information		23
2.1. Consumer search		23
2.1.1. The cost of information		23
2.1.2. Price search		24
2.1.3. Sequential search		26
*2.2. The noisy monopolist		28
2.3. Market equilibrium		32
2.3.1. Price dispersion		32
2.3.2. Sales		34
*2.4. Oligopoly and consumer search		39
2.4.1. Information structures and oligopoly		40
2.4.2. The Hotelling model		42
2.4.3. Price dispersion		45
2.4.4. A spatial game with search		50
2.4.5. Aggregate demand increases with the size of the marketplace		52
2.4.6. Geographical concentration in marketplaces		54

3. Asymmetric quality information	57
3.1. Product warranties	57
3.1.1. Moral hazard problems	58
3.1.2. Warranties with double moral hazard	59
*3.2. The noisy monopolist again	64
3.3. Market equilibrium	66
3.3.1. Adverse selection	70
3.3.2. Equilibrium and adverse selection	72
*3.4. Buyers' and sellers' equilibria	76
3.4.1. Buyers set their price	76
3.4.2. Sellers set their price	78
*3.5. The lemons principle reconsidered	80
3.5.1. A counterexample to Akerlof's lemons principle	83
3.6. Resale price maintenance	86
4. Auctions	89
4.1. Auctions with independent private values	90
4.1.1. Four types of auctions	91
4.1.2. Auctions as games with incomplete information	93
4.1.3. Optimal auctions from the seller's point of view	96
4.1.4. Experimental results	99
4.2. Auctions with a common value	105
4.2.1. The winner's curse	106
4.2.2. Division of rent	107
4.2.3. Information pooling through joint bidding	110
4.2.4. A general model	112
4.2.5. Further problems	113
4.3. Incentive procurement contracts	114
*4.4. Misinformation in auction markets	116
4.4.1. The purchaser's expectations	117
4.4.2. Manipulation of the expected price	118
4.4.3. The cartel's short-run policy	119
4.4.4. The cartel's long-run policy	120
4.4.5. An example	120
5. Signaling equilibria	122
5.1. Job signaling	123
5.1.1. Signals, indices, and abilities	123
5.1.2. A simple model without signaling	124

5.1.3. Education as a signal	125
5.1.4. Signaling equilibria	128
5.1.5. Reactive equilibria	130
5.1.6. Signaling games and stable equilibria	133
5.2. The insurance market	134
*5.3. Credit rationing	142
5.3.1. Honesty versus dishonesty	143
5.3.2. The supply of credit to a particular borrower	145
5.3.3. Equilibrium with rationing	146
5.3.4. Collateralization	148
5.3.5. Collateral as a signaling device	149
5.3.6. Collateral as an incentive device	151

Part II. Dynamics

6. Oligopoly and collusion	155
6.1. Explicit collusion	156
6.1.1. A prisoner's dilemma	157
6.1.2. How to deter cheating?	160
6.1.3. Joint profit maximization and incomplete information	164
6.1.4. Cheating and imperfect information	165
6.2. Cournot–Nash equilibrium	167
6.2.1. Experimental results	168
6.2.2. Incomplete information	168
6.2.3. Acquisition and transmission of information	170
6.3. Tacit collusion	173
6.3.1. A noncooperative collusive equilibrium	174
6.3.2. Complete information	177
6.3.3. Tacit coordination and imperfect information	178
6.4. Antitrust implications	182
6.4.1. Old intuitions	182
6.4.2. The wood pulp decision	183
6.4.3. Normal competition	184
6.4.4. The possibility of noncooperative equilibria	186
6.4.5. New insights	189
6.4.6. Collusive information transmission	193
6.4.7. Tying clauses	193
6.4.8. “Meet competition” clauses	194
6.4.9. “Most favored nations” clauses	195

7. Predatory pricing	197
7.1. Theory	197
7.1.1. Why predatory pricing is rare and unimportant	198
7.1.2. The chain store paradox or the impossibility of predation	201
7.1.3. The lack of common knowledge can generate predation	204
7.1.4. Reputation and predation	206
7.1.5. Nash equilibria and predation	211
7.1.6. Geographical price discrimination and predation	215
7.1.7. Necessary conditions for predatory pricing	217
7.2. Evidence	218
7.2.1. Experimental evidence	219
7.2.2. Antitrust litigation	224
7.2.3. The historical record	225
7.3. Antitrust implications	231
7.3.1. No standard	232
7.3.2. Price below marginal cost	232
7.3.3. Limit pricing and output restrictions	235
7.3.4. Limit pricing and quasi-permanent price reductions	239
7.3.5. Abuse of a dominant position	240
8. Efficient double auctions	243
8.1. Efficient capital markets	243
8.1.1. Weak efficiency: the random walk hypothesis	244
8.1.2. Semistrong efficiency	245
8.1.3. Strong efficiency	246
8.1.4. The impossibility of efficient capital markets	247
8.1.5. Rational-expectations equilibria and experimental markets	249
*8.2. Information aggregation in futures markets	254
