Contents

Chapter 1: Introduction	1
1.1 Simple Capital Budgeting Decisions	2
1.2 Complex Capital Budgeting Decisions	3
1.2.1 Measurement	5
1.2.2 Multiconsideration Decision Making	6
1.3 Overview of the Book	7
Appendix 1: Time Value of Money Concepts	8
1A.1 Compound Growth of a Single Amount	8
1A.2 Present Value of a Single Amount	9
1A.3 Compound Value of a Stream of Payments	9
1A.4 Present Value of a Stream of Payments	10
1A.5 Compounding More than Once a Period	11
1A.6 Continuous Compounding	12
1A.7 Present Values of Infinite-Life Streams	13
Problems	14
Selected References	15
Chapter 2: Evaluation of Capital Investments	19
2.1 Identifying Cash Costs and Benefits	19
2.1.1 Tax Considerations	20
2.1.2 Investment Acquisition Costs	22
2.1.3 Sale of a Capital Investment	23
2.1.4 Benefits and Costs from Use of an Asset	23
2.1.5 Financing Costs	24

2.2	Evaluation of Capital Investment Cash Flows	26
2.2.1	Net Present Value	26
2.2.2	Internal Rate of Return	30
2.2.3	Payback Period	31
2.2.4	Accounting Rate of Return	32
2.3	Ranking Capital Investments	33
2.3.1	Ranking Mutually Exclusive Projects	33
	Unequal Lives and the Equivalent Annuity	35
2.4	Required Return on Investment	38
2.4.1	Cost of Debt	39
2.4.2	Cost of Preferred Stock	40
2.4.3	Cost of Common Equity	41
	Dividend Growth Model	41
	Mean-Variance Capital Asset Pricing Model	42
	Arbitrage Pricing Theory and Multifactor CAPMs	44
	Cost of New Equity	44
2.4.4	The Weighted Average Cost of Capital and Shareholder Wealth	45
2.4.5	Marginal Cost of Capital	46
2.4.6	Cost of Depreciation-Generated Funds	46
2.5	Capital Rationing	49
	Investment Opportunity Rate Assumptions	52
	Summary	52
	Problems	53
	Selected References	55
Chapter 3: Single-Project Risk Analysis		59
3.1	Company vs. Diversified Shareholder Perspective	60
3.1.1	Normative Goals and the Appropriate Risk Measure	60
3.1.2	Positive Analysis	61
3.2	Sensitivity Analysis	62
3.3	Probability-Based Risk Measures	64
3.3.1	Standard Deviation of Net Present Value	64
3.3.2	Standard Deviation of Net Present Value of Perfectly Correlated Cash Flows	66
3.3.3	Standard Deviation of Net Present Value of Uncorrelated Cash Flows	68
3.3.4	Partially Correlated Cash Flows	68

3.3.5 Hillier Method	69
3.3.6 Conditional Probability Analysis	71
3.3.7 Simulation	73
3.3.8 Decision Trees	73
3.3.9 Standard Deviation of the Internal Rate of Return	78
3.3.10 Semivariance	79
3.3.11 Coefficient of Variation	81
3.3.12 A Caution on the Standard Deviation of the Net Present Value	81
Summary	82
Problems	82
Selected References	84
Chapter 4: Risk from the Company and Shareholder Perspective	89
4.1 The Company Risk Perspective: Portfolio Theory	89
4.1.1 Diversification Concepts	89
4.1.2 Measures of Risk Contribution	90
4.1.3 Basic Portfolio Theory	93
4.1.4 Portfolio Theory with More Than Two Investments	95
4.1.5 Portfolio Selection	97
4.1.6 Separation Theorem	98
4.2 Risk from the Shareholder Perspective	100
4.2.1 Mean-Variance Capital Asset Pricing Model Critique of the CAPM	100
4.2.2 Arbitrage Pricing Theory	105
Direct Application of Arbitrage to Capital Budgeting— An Example	107
Summary	111
Problems	112
Selected References	114
Chapter 5: Linear Programming Models for Capital Budgeting	119
5.1 The Linear Programming Model: An Introduction	121
5.1.1 The General Linear Programming Model	122
5.1.2 Solution of Real-Life Linear Programming Problems	126

5.2	Capital Budgeting Under Capital Rationing	128
5.2.1	Capital Budgeting Under Pure Capital Rationing, with No Lending or Borrowing Allowed	129
	The Basic Model	130
	Mutually Exclusive and Contingent Projects	131
5.2.2	Capital Budgeting Where Lending Is Allowed	132
5.2.3	Capital Budgeting Where Borrowing Is Allowed	132
5.3	Capital Budgeting Where Borrowing and Lending Are Allowed	133
5.3.1	The Basic Model	133
5.3.2	Borrowing at Different Interest Rates	134
5.4	Some Comments Regarding Fractional Projects	135
5.5	Acceptability and Implementation of Quantitative Techniques	136
5.6	Illustrative Examples	137
	Summary	150
	Problems	150
	Selected References	153

Chapter 6: Dual Linear Programming and Capital Budgeting **155**

6.1	Duality in Linear Programming: An Introduction	155
6.2	Interpretation of Dual Variables	157
6.2.1	Property 1 of Consistent Solutions	161
6.2.2	Property 2 of Consistent Solutions	163
6.2.3	Property 3 of Consistent Solutions	164
6.2.4	Property 4 of Consistent Solutions	164
6.2.5	Property 5 of Consistent Solutions	165
6.2.6	Property 6 of Consistent Solutions	165
6.2.7	Summary of Conclusions Obtained from Properties	165
6.3	Finding the "Right" Discount Factors	166
6.4	Illustrative Examples	167
	Summary	170
	Problems	170
	Selected References	171

Chapter 7: Duality in Horizon Models for Capital Budgeting	173
7.1 Capital Budgeting Where Lending Is Allowed	173
7.1.1 The Case Where There Are No Cash Flows Beyond the Horizon	173
7.1.2 The Case Where There Are Cash Flows Beyond the Horizon	176
7.2 Capital Budgeting Where Borrowing and Lending Are Allowed	177
7.2.1 The Case Where There Is No Limit on Lending or Borrowing	177
7.2.2 The Case Where There Is Limit on Borrowing	179
7.2.3 Borrowing at Different Interest Rates	181
7.3 Illustrative Examples	182
Summary	192
Problems	192
Selected References	192
Chapter 8: Integer Programming Models for Capital Budgeting	193
8.1 Introduction	193
8.2 The Branch-and-Bound Method	194
8.3 Duality and Integer Programming	196
8.4 Illustrative Examples	196
Summary	203
Problems	203
Selected References	204
Chapter 9: Goal-Programming Models for Capital Budgeting	205
9.1 Introduction to Goal Programming	206
9.1.1 Goal Programming with a Single-Objective Function	206
9.1.2 Goal Programming with Multiple-Objective Functions	207

9.2	Preemptive Goal Programming	212
9.2.1	Solutions to Preemptive Goal-Programming Problems	213
	Summary	217
	Problems	217
	Selected References	218

Chapter 10: Simulation and Capital Budgeting **221**

10.1	Introduction	221
10.2	Discrete System Simulation	224
10.2.1	Collecting and Recording Relevant Statistics	225
10.3	Determining the Distribution of Stochastic Variables	226
10.4	Random Number Generation	230
10.4.1	Uniform Random Number Generation	230
10.4.2	Continuous Uniformly Distributed Random Numbers	231
10.4.3	Generation of Random Numbers from a Population of Integer Uniformly Distributed Numbers	232
10.4.4	Generation of Random Numbers from a Population of Integer Nonuniformly Distributed Numbers	232
10.4.5	Generation of Normally Distributed Random Numbers	234
10.5	Simulation and Capital Budgeting	234
10.6	The Sequential Simulation Procedure	237
	Summary	246
	Problems	247
	Selected References	247

Chapter 11: Applying Some Advanced Mathematical Programming Models to Capital Budgeting **249**

11.1	Sensitivity Analysis and Parametric Programming	249
11.2	Chance-Constrained Programming	253
11.3	Quadratic Programming	262

Contents	xiii
Summary	266
Problems	267
Selected References	267
Appendix Tables	269
Table A.1: Compound Value of a Single Payment	270
Table A.2: Present Value of a Single Payment	271
Table A.3: Compound Value of an Annuity	272
Table A.4: Present Value of an Annuity	273
Table A.5: Compound Value of a Single Payment, Continuous Compounding	274
Table A.6: Present Value of \$1 per Period, Continuous Receipt and Continuous Compounding	275
Table A.7: The Standard Normal Distribution	276
Index	277
