Preface xi

Foreword by Walter Alvarez xv

Acknowledgements xix

1 Brief introduction to **1**
1.1 ··· The history of climate 1
1.2 ... Ice age theories 7
1.3 ... Spectra 14

2 Astronomy **19**
2.1 Why astronomical forcing? 19
2.1.1 Resonant oscillator 22
2.1.2 Relaxation oscillator 24
2.1.3 Driven oscillator 26
2.2 Orbital parameters 28
2.2.1 Methods of calculation 28
2.2.2 Eccentricity 30
2.2.3 Precession 34
2.2.4 Obliquity 37
2.2.5 Insolation 38
2.2.6 Orbital inclination 40

3 Spectral analysis **47**
3.1 Introduction 47
3.2 The Fourier transform 48
3.2.1 Basic properties 48
3.2.2 Glacial Fourier transform 51
3.2.3 The uncertainty principle 53

3.2.4 Periodogram 55
3.2.5 Sharp feature in the time domain 57
3.2.6 Fast Fourier Transform (FFT) 60
3.2.7 Padding with zeros 60
3.2.8 Aliasing 61
3.3 Blackman–Tukey method 63
3.3.1 Example: eccentricity 66
3.3.2 Example: Site V12-12266
3.4 Tapers 70
3.5 Lomb–Scargle periodogram 73
3.6 Multitaper analysis 74
3.7 Maximum likelihood analysis 74
3.8 Maximum entropy method 79
3.9 Cross spectrum and coherency 80
3.10 Bispectra 83
3.11 Statistics of the Fourier power spectrum 85
3.12 Plotting power, log(power) and amplitude 89
3.13 Monte Carlo simulation of backgrounds 91
3.13.1 Red and white noise 93
3.13.2 Prewhitening 94
3.14 Frequency estimation: the HWHM rule 96
3.15 Spectral width and shape determination 98

4 Climate proxies 105
4.1 Oxygen isotopes 105
4.1.1 Physical mechanisms 106
4.1.2 Universality 108
4.2 The SPECMAP stack and marine isotope stage numbers 111
4.3 Deuterium—a temperature proxy? 112
4.4 Integrative proxies and phase delay 114
4.5 Carbon-13 116
4.6 Vostok 118
4.7 Atmospheric $\delta^{18}O$ and the Dole Effect 120
4.8 $\delta^{18}O/CO_2$ Mystery 122
4.9 Other sea floor records 123
4.9.1 Terrigenous component 123
4.9.2 Foram size: the coarse, or "sand", component 125
4.9.3 Lysocline: carbonate isopleths 126
4.10 Terrestrial records 128
4.10.1 Devils Hole 128
4.10.2 Loess 129
4.11 Features of the data 129
4.11.1 The 100,000 year cycle 130
4.11.2 Sudden terminations and sawtooth shape 130
4.11.3 The 41,000 year cycle 132

4.11.4 Narrow spectral peaks . . . 135
4.11.5 The 23,000 year cycle . . . 136

5 Time scale and tuning . . . 142
5.1 Effects of Chatter and Drift . . . 142
5.2 Tuning . . . 143
5.2.1 Tuning example: Vostok . . . 144
5.3 Band-pass filtering . . . 148
5.4 SPECMAP: success and failure analysed . . . 149
5.4.1 Success . . . 154
5.4.2 Failure of SPECMAP; triumph for tuning . . . 156
5.4.3 SPECMAP and orbital inclination . . . 160
5.5 Tuned and overtuned sedimentation rates . . . 161
5.6 Overtuning . . . 165
5.6.1 Example 1: tuning a sine wave to eccentricity . . . 165
5.6.2 Example 2: tuning inclination to insolation . . . 167
5.7 "Validation" of tuning—invalid . . . 169
5.8 Minimal tuning . . . 172
5.9 Overtuning: examples from the literature . . . 173
5.9.1 Site 664 . . . 174
5.9.2 Site 659 . . . 175
5.9.3 Low Latitude Stack (Site 677 and MD900963) . . . 176
5.9.4 Site 849 178

6 Mechanisms, models and theories . . . 182
6.1 Mechanisms . . . 182
6.1.1 Radiative forcing and the greenhouse effect . . . 182
6.1.2 Atmospheric processes . . . 185
6.1.3 Land-based mechanisms . . . 188
6.1.4 Ocean-based mechanisms . . . 190
6.1.5 Insolation forcing . . . 191
6.2 Nonlinear models . . . 195
6.2.1 Nonlinear ice model . . . 197
6.2.2 The AM radio nonlinear model . . . 198
6.3 Problems for models to address . . . 201
6.4 Alternative astronomical models . . . 202
6.4.1 Orbital inclination model . . . 202
6.4.2 Statistical fluctuation model . . . 203
6.4.3 Resonant enhancement of the 95 kyr peak . . . 204
6.4.4 Precession triggering . . . 205
6.4.5 Multi-state climate model . . . 206
6.4.6 Derivative of eccentricity . . . 207
6.4.7 Frequency modulation . . . 210
6.4.8 Nonlinear memory model of Berger . . . 211

7 Accretion climate models **215**
7.1 Origin and distribution of interplanetary dust 215
7.2 Transport to the Earth 217
7.3 Hitting the Earth's atmosphere 219
7.4 Measurements of accretion rates 220
7.6 Cloud cover model 223
7.7 Noctilucent cloud model 226
7.8 Ozone model 227

8 Evidence **231**
8.1 The 100 kyr problem 231
8.2 The Stage-11 problem 233
8.3 The causality problem 236
8.4 The unsplit peak problem 240
8.4.1 Simultaneous presence of eccentricity and inclination . . . 243
8.4.2 Picking narrow peaks: circular reasoning? 245
8.5 The absence of the 400 kyr cycle 247
8.6 The bispectrum problem 248
8.7 The precession problem 250
8.8 The 41 to 100 kyr transition 252
8.9 Prediction verified: the 100 kyr accretion cycle 254
8.10 The 41 kyr problem 256
8.11 The sudden termination problem 257
8.12 The "unexplained" 70 kyr peak 258
8.13 Vostok 260
8.14 Millennial scale oscillations 261

9 Status of our understanding? **269**

Appendix 1: Bispectral analysis **275**
Computation of the Bispectrum 277

Appendix 2: Matlab programs **279**
Note on vector and matrix programming 279
Reading data 280
Simulated data 280
Adjusting to age tie points 281
Interpolating to evenly-spaced time points 282
Fast Fourier transform 283
Taper 285
Background simulation 286
Random points with interpolation 287
Random points averaged 288
Random points convolved with Gaussian 288
Lomb/Scargle periodogram 289
Band pass filter 294

Appendix 3: Maximum entropy plots **297**

Appendix 4: Websites for data **299**
