Contents

1	Production System Performance	1
1.1	Introduction	1
1.2	Production System	2
1.2.1	Architecture	2
1.2.2	The RETE Algorithm	4
1.3	Cost Model	8
1.3.1	Parameters	8
1.3.2	Equations	9
1.3.3	Parameter Measurement	10
1.4	Performance Optimization	10
1.4.1	Motivation	10
1.4.2	Topological Transformation	12
1.4.3	Algorithm Overview	12
1.4.4	Parameter Estimation	15
1.4.5	Multiple-Rule Optimization	17
1.5	Constraints for Reducing Possibilities	18
1.5.1	Minimal-Cost Constraint	18
1.5.2	Connectivity Constraint	20
1.5.3	Priority Constraint	21
1.6	Evaluation Results	23
1.6.1	Evaluation Environment	23
1.6.2	Effects of Optimization	24
1.6.3	Effects of Constraints	26
1.7	Related Work	28
1.8	Summary	30

2	Parallel Production Systems	31
2.1	Introduction	31
2.2	Parallel Firing Model	33
2.3	Interference Analysis	34
2.3.1	Data Dependency Graph	34
2.3.2	Compile-Time and Run-Time Analyses	35
2.3.3	Paired-Rule and All-Rule Conditions	37
2.4	Selection Algorithm	43
2.4.1	Accuracy of the Interference Analysis	43
2.4.2	Algorithm Overview	44
2.5	Decomposition Algorithm	46
2.5.1	Mapping Rules on Multiple Processors	46
2.5.2	Algorithm Overview	47
2.5.3	Decomposition Heuristics	49
2.6	Parallel Programming Environment	51
2.6.1	Language Facilities	51
2.6.2	System Configuration	52
2.7	Evaluation Results	54
2.7.1	Evaluation of Parallel Executability	54
2.7.2	Sources of Parallel Executability	54
2.7.3	Evaluation of the Decomposition Algorithm	57
2.8	Related Work	58
2.9	Summary	59
3	Distributed Production Systems	61
3.1	Introduction	61
3.2	Distributed Production Systems	62
3.2.1	Agent Architecture	62
3.2.2	Organizational Knowledge	64
3.3	Distributed Firing Protocol	67
3.4	Organization Self-Design	69
3.4.1	Agent Architecture	69
3.4.2	Reorganization Primitives	71
3.4.3	Organizational Knowledge	73

3.5	Reorganization Protocol	75
3.6	Evaluation Results	77
3.6.1	Simulation Excluding Overheads	78
3.6.2	Simulation Including Overheads	80
3.7	Related Work	83
3.8	Summary	85
4	Multiagent Production Systems	87
4.1	Introduction	87
4.2	Multiagent Architecture	88
4.2.1	Shared or Distributed Working Memory	88
4.2.2	Transaction Model	90
4.3	Concurrency Control	92
4.3.1	Production System Locks	92
4.3.2	Lazy Lock Protocol	93
4.4	Inter-Rule Consistency	98
4.4.1	Logical Dependency Model	98
4.4.2	Maintenance Mechanism	99
4.5	Evaluation Results	102
4.6	Related Work	103
4.7	Summary	104
5	Meta-Level Control of Multiagent Systems	105
5.1	Introduction	105
5.2	Conventional Control Techniques	107
5.2.1	Explicit and Implicit Control	107
5.2.2	Example Coding Techniques	108
5.3	Procedural Control Macros	109
5.3.1	Rule Invocation Macro	110
5.3.2	Rule Selection Macro	112
5.3.3	Concurrent Execution Macro	113
5.3.4	Plan Definition Macro	114
5.4	Meta-level Control Mechanism	115
5.5	Network Operation Domain	117

5.5.1	Multiagent Operation	117
5.5.2	Problem Characteristics	121
5.6	Network Operation Agents	122
5.6.1	Action Model	122
5.6.2	Agent Configuration	123
5.7	Experiments	125
5.7.1	Multiagent Rule Firings	125
5.7.2	Monitoring Multiagent Rule Firings	127
5.8	Related Work	129
5.9	Summary	130
A	Meta-Level Control for Rulebase Maintenance	133
A.1	The CAIRNEY Rulebase	133
A.2	Representation and Run-Time Overheads	134
A.3	Readability and Maintainability Enhancements	135
B	Waltz's Labeling Program	141
	Bibliography	153
	Index	162
