

Alf Kimms

Multi-Level Lot Sizing and Scheduling

Methods for Capacitated, Dynamic,
and Deterministic Models

With 22 Figures
and 155 Tables

TECHNISCHE HOCHSCHULE DARMSTADT	
Fachbereich 1	
Gesamtbibliothek	
Betriebswirtschaftliche	
Inv.-Nr.:	47.883
Abstell-Nr.:	A25/981

Contents

List of Symbols	xv
List of Abbreviations	xxiii
1 Introduction	1
1.1 Problem Context	2
1.2 Problem Outline and General Issues	2
1.3 Case Descriptions	4
1.3.1 Eastman Kodak Company	5
1.3.2 Owens–Corning Fiberglas Corporation	5
1.4 Current Practice and Motivation	6
1.5 Chapter Synopsis	10
2 Literature Review	13
2.1 Scope of the Review	13
2.2 Contributions of General Interest	15
2.3 Dynamic Demand, Unlimited Capacity	16
2.4 Dynamic Demand, Scarce Capacity	23
2.5 Intermediate Results	28
3 Problem Specifications	29
3.1 Basic Assumptions	29
3.2 Multiple Machines	31
3.3 Problem Insights	36
3.3.1 Complexity Considerations	36
3.3.2 Derived Parameters	36

3.3.3	Another Point of View: Gozinto-Trees . . .	39
3.3.4	Initial Inventory	40
3.3.5	Schedules	42
3.3.6	Lot Splitting	45
3.3.7	Some Valid Constraints	49
3.3.8	Postprocessing	54
3.4	Parallel Machines	60
3.5	Multiple Resources	63
3.6	Partially Renewable Resources	66
4	Instance Generation	69
4.1	Methods	69
4.1.1	Generation of Gozinto-Structures	70
4.1.2	Generation of External Demand	80
4.1.3	Generation of Capacity Limits	82
4.1.4	Generation of Holding and Setup Costs	86
4.1.5	Generating PLSP-PM Instances	88
4.1.6	Generating PLSP-MR Instances	89
4.1.7	Generating PLSP-PRR Instances	89
4.1.8	Some Remarks	89
4.2	Experimental Design for the PLSP-MM	90
4.2.1	Constant Parameters	90
4.2.2	Systematically Varied Parameters	92
4.2.3	Randomly Generated Parameters	92
4.3	A Comparison of Computing Machines	93
5	Lower Bounds	95
5.1	Network Representations	95
5.1.1	A Simple Plant Location Representation	96
5.1.2	Experimental Evaluation	98
5.2	Capacity Relaxation	102
5.2.1	Motivation for Relaxing Capacity Constraints	102
5.2.2	Basic Enumeration Scheme	104
5.2.3	Branching Rules	106
5.2.4	Bounding Rules	108
5.2.5	Experimental Evaluation	112
5.3	Lagrangian Relaxation	115

5.3.1	Experimental Evaluation	118
5.4	Summary of Evaluation	120
6	Multiple Machines	123
6.1	Unsuccessful Attempts	123
6.1.1	LP-Based Strategies	124
6.1.2	Improvement Schemes	125
6.1.3	Data Perturbation	125
6.1.4	Searching in the Method Parameter Space	126
6.2	Common Construction Principles	126
6.3	Randomized Regret Based Sampling	131
6.3.1	An Introduction to Random Sampling . . .	131
6.3.2	Randomized Regret Based Priority Rules .	133
6.3.3	Tuning the Method Parameters	136
6.3.4	Modifications of the Construction Scheme .	139
6.3.5	An Example	140
6.3.6	Experimental Evaluation	143
6.4	Cellular Automata	147
6.4.1	An Introduction to Cellular Automata . . .	148
6.4.2	Masked Setup State Selection	149
6.4.3	An Example	151
6.4.4	Experimental Evaluation	153
6.5	Genetic Algorithms	157
6.5.1	An Introduction to Genetic Algorithms . .	157
6.5.2	Problem Representation	159
6.5.3	Setup State Selection Rules	159
6.5.4	Fitness Values	162
6.5.5	Genetic Operators	163
6.5.6	The Working Principle in a Nutshell	164
6.5.7	An Example	164
6.5.8	Experimental Evaluation	166
6.6	Disjunctive Arc Based Tabu Search	170
6.6.1	An Introduction to Tabu Search	170
6.6.2	The Data Structure	171
6.6.3	Tabu Search	176
6.6.4	Intensification of the Search	180
6.6.5	Modifications of the Construction Scheme .	182

6.6.6	An Example	186
6.6.7	Experimental Evaluation	192
6.7	Demand Shuffle	195
6.7.1	Basic Ideas	195
6.7.2	The Data Structure	196
6.7.3	Data Structure Manipulations	197
6.7.4	Modifications of the Construction Scheme	206
6.7.5	An Example	213
6.7.6	Experimental Evaluation	216
6.8	Summary of Evaluation	220
6.9	Some Tests with Large Instances	221
7	Parallel Machines	225
7.1	Related Topics: Job Scheduling	226
7.2	A Demand Shuffle Adaption	227
7.3	Preliminary Experimental Evaluation	229
8	Multiple Resources	231
8.1	Related Topics: Project Scheduling	231
8.2	A Demand Shuffle Adaption	232
8.3	Preliminary Experimental Evaluation	233
9	Partially Renewable Resources	235
9.1	Related Topics: Course Scheduling	235
9.2	A Demand Shuffle Adaption	236
9.3	Preliminary Experimental Evaluation	237
10	Rolling Planning Horizon	239
10.1	Literature Review	240
10.2	Stability Measures	242
10.3	Pitfalls: Initial Inventory	244
11	Method Selection Guidelines	247
11.1	Basic Ideas	247
11.2	Instance Characterization	250

12 Research Opportunities	251
12.1 Extensions	251
12.2 Linkages to Other Areas	254
13 Conclusion	257
A Lower Bounds for the PLSP-MM	261
A.1 LP-Relaxation: PLSP-Model	262
A.2 LP-Relaxation: Plant Location Model	265
A.3 Capacity Relaxation	268
A.4 Lagrangean Relaxation	271
B Upper Bounds for the PLSP-MM	275
B.1 Randomized Regret Based Sampling	276
B.2 Cellular Automaton	279
B.3 Genetic Algorithm	282
B.4 Disjunctive Arc Based Tabu Search	285
B.5 Demand Shuffle	288
C PLSP-PM: Demand Shuffle	291
D PLSP-MR: Demand Shuffle	295
E PLSP-PRR: Demand Shuffle	301
Bibliography	305
List of Tables	341
List of Figures	349
