<i>Preface</i>	<i>page</i> xiii
1 Introduction	1
1.1 The coastal zone	2
1.2 Coastal geomorphology	3
1.2.1 Coastal landforms	5
1.2.2 Coastal morphodynamics	7
1.3 Historical perspective	9
1.3.1 Pre-20th-century foundations	9
1.3.2 Early-20th-century geographical context	11
1.3.3 Mid-20th-century coastal studies	15
1.3.4 Late-20th-century process and historical geomorphology	17
1.4 Temporal and spatial scales	19
1.4.1 Hierarchy of time scales	22
1.5 Coastal systems	25
1.5.1 Landform morphology	25
1.5.2 System interrelationships, feedback and equilibrium	28
1.6 Human impact on the coast	33
1.7 Summary and outline of following chapters	34
2 Geological setting and materials	36
2.1 Historical perspective	37
2.1.1 Global tectonics	37
2.1.2 Quaternary variations	39
2.2 Plate-tectonic setting	41
2.2.1 Continental coasts	43
2.2.2 Island coasts	47

2.3	Sea-level variations	48
2.3.1	Pre-Quaternary ocean volume variations	49
2.3.2	Quaternary sea-level variations	51
2.3.3	Isostatic adjustments	60
2.3.4	Present and future sea-level trends	66
2.4	Materials	67
2.4.1	Lithology	68
2.4.2	Clastic sediments	70
2.4.3	Carbonate sediments	74
2.5	Paleoenvironmental analysis and sedimentary history	82
2.5.1	Paleoenvironmental analysis	82
2.5.2	Dating coastal landforms	84
2.6	Summary	88
3	Coastal processes	90
3.1	Historical perspective	91
3.2	Sedimentary processes	93
3.2.1	Sediment entrainment	94
3.2.2	Sediment transport	98
3.2.3	Sediment deposition	99
3.3	Wave processes	100
3.3.1	Types of waves	100
3.3.2	Wave generation and movement	103
3.3.3	Wave transformations	109
3.3.4	Breaking waves, reflection and dissipation	111
3.3.5	Infragravity waves	113
3.3.6	Wave measurement	117
3.3.7	Wave climate	118
3.4	Tides and tidal influence	119
3.4.1	Tidal oscillations	120
3.4.2	Tidal processes in embayments, estuaries and creeks	125
3.5	Other oceanographic processes	128
3.5.1	Ocean currents	128
3.5.2	Sea ice	130
3.5.3	El Niño–Southern Oscillation	131
3.5.4	Storms and extreme events	134
3.6	Terrestrial and subaerial processes	136
3.6.1	Wind action	137
3.6.2	Frost action	139

3.6.3	Fluvial processes	140
3.6.4	Weathering and hillslope processes	140
3.7	Biological processes	140
3.8	Summary	141
4	Rocky coasts	143
4.1	Historical perspective	146
4.1.1	Darwin, Dana and Davis	146
4.1.2	Lithology and weathering	147
4.2	Plate-tectonic setting and wave planation	149
4.2.1	Plate-tectonic setting	149
4.2.2	Shelf abrasion and island planation	151
4.3	Cliff and shore platform morphology	153
4.3.1	Planform of rocky coasts	153
4.3.2	Cliffs in profile	157
4.3.3	Shore platforms	165
4.3.4	Polygenetic rocky coasts and the role of inheritance	169
4.4	Processes and rates of erosion	170
4.4.1	Operative processes	170
4.4.2	Relation of processes to morphology	174
4.4.3	Cliff and shore platform erosion rates	176
4.5	Cliff morphodynamics	178
4.5.1	Wave energy and rock resistance	178
4.5.2	Models of soft-rock retreat	183
4.6	Summary	187
5	Reef coasts	189
5.1	Historical perspective	191
5.2	Reef morphology and zonation	194
5.2.1	Reef morphology	195
5.2.2	Reef zonation	199
5.3	Reefs in time and space	201
5.3.1	Reef distribution and structure	204
5.3.2	Quaternary sea-level variation	207
5.3.3	Holocene reef growth and response to sea level	210
5.3.4	Reef growth and sedimentation	213
5.4	Processes on reefs	216
5.4.1	Sediment production on reefs	217
5.4.2	Wave and tide processes	219
5.4.3	Extreme events and disturbances	224

5.5	Morphodynamic models of reefs	227
5.5.1	Fringing reef development	228
5.5.2	Barrier reefs and shelf reefs	234
5.5.3	Atolls and atoll reef islands	241
5.6	Summary	246
6	Beach and barrier coasts	248
6.1	Historical perspective	250
6.1.1	Beach studies	251
6.1.2	Barrier studies	253
6.2	Beach morphology	255
6.2.1	Beach platform	256
6.2.2	Beach profile	265
6.3	Beach morphodynamics	273
6.3.1	Beach types	273
6.3.2	Three-dimensional beach morphology	279
6.3.3	Beach variation over time	284
6.3.4	Beaches in other settings	287
6.4	Beach and backshore change over decadal–century time scales	289
6.4.1	Recession, accretion and stable shorelines	290
6.4.2	Beach ridges	292
6.4.3	Beach–dune interactions	294
6.5	Barriers and barrier islands	298
6.5.1	Barrier morphology	301
6.5.2	Stillstand barriers	303
6.5.3	Barrier islands	306
6.5.4	Gravel barriers	312
6.5.5	Dune-building phases	315
6.6	Summary	320
7	Deltas and estuaries	321
7.1	Historical perspective	323
7.1.1	Deltas	323
7.1.2	Estuaries	325
7.2	Deltaic and estuarine processes	327
7.2.1	Delta-mouth processes	327
7.2.2	Estuarine hydrodynamics	330
7.2.3	Deltaic–estuarine sedimentation	334
7.3	Deltaic–estuarine morphology	336
7.3.1	The influence of tide and wave processes	336
7.3.2	Delta and estuary components	338

7.4	Morphodynamic development of deltas	340
7.4.1	River-dominated deltas	340
7.4.2	Wave influence on deltas	345
7.4.3	Tide influence on deltas	349
7.4.4	Patterns of delta distributary change	353
7.5	Morphodynamic development of estuaries	356
7.5.1	Drowned valleys	357
7.5.2	Tide-dominated estuaries	360
7.5.3	Wave-influenced estuaries	366
7.5.4	Coastal lagoons	371
7.6	Summary	374
8	Muddy coasts	378
8.1	Historical perspective	381
8.1.1	Stratigraphy	381
8.1.2	Process studies	383
8.2	Tidal flats	386
8.2.1	Sedimentary characteristics	388
8.2.2	Tidal flat morphology	391
8.2.3	Longer-term coastal plain development	396
8.2.4	Cheniers and chenier plains	397
8.3	Tidal inlets and tidal creeks	400
8.3.1	Tidal inlets	400
8.3.2	Tidal creeks and creek dynamics	403
8.4	Salt-marsh and mangrove shorelines	407
8.4.1	Salt-marsh and mangrove vegetation	408
8.4.2	Species distribution	411
8.4.3	Geomorphological settings	413
8.4.4	Geomorphologically defined habitats	416
8.5	Salt-marsh and mangrove morphodynamics	418
8.5.1	Landforms and sedimentation	420
8.5.2	Modelling marsh accretion	424
8.5.3	Muddy coast morphodynamics and sea-level change	430
8.6	Summary	432
9	Morphodynamics of coastal systems	435
9.1	Models in coastal geomorphology	436
9.1.1	Models and hypothesis generation	436
9.1.2	Types of models	439
9.2	Coastal systems	442
9.2.1	Feedback and thresholds	443
9.2.2	Equilibrium	445

9.3	Geomorphological change over time	450
9.3.1	Inheritance, convergence and polygenetic landforms	452
9.3.2	Response to changes over time	455
9.3.3	The role of extreme events	461
9.4	Modelling coastal morphodynamics	464
9.4.1	Equilibrium shore profiles	466
9.4.2	Multidimensional modelling	469
9.5	Summary	474
10	Human activities and future coasts	476
10.1	Human interaction with the coast	477
10.2	Human activities within the coastal system	479
10.2.1	Perturbations	480
10.2.2	Boundary conditions	481
10.2.3	Intrinsic adjustments	483
10.3	Tourism and the resort cycle	484
10.4	Global environmental change	486
10.4.1	Sea-level rise	487
10.4.2	Response of coasts	488
10.4.3	Human adaptation to change on the coast	489
10.5	Prospects	495
