CONTENTS

	PREFACE	ix
	SUMMARY	xi
1	INTRODUCTION	1
2	ECONOMICS AND ENVIRONMENT	5
	2.1 Economic and environmental interactions	5
	2.2 Main environmental problems	11
	2.3 Background of environmental problems: population growth, economic growth and technology	12
	2.4 Environmental studies	15
	2.5 A stock-flow model of economic ecological interactions	20
	2.6 Measuring economic activity, income and changes in wealth	28
	2.7 Solutions of environmental problems	32
	2.8 Economic decision-making	34
	2.9 The need for political decision-making	38
	2.10 Economic environmental analysis	41
	2.11 Aim of the study	45
	APPENDIX I to Chapter 2:	47
	A stock-flow model for economic environmental interactions	
3	ECONOMIC THEORY OF THE ENVIRONMENT	55
	3.1 Optimal allocation of production factors	55
	3.2 The market mechanism and Pareto optimality	56

3.3	The failure of the market mechanism: external effects	62
3.4	Pareto optimality and external effects	65
3.5	The impact of an emission tax	68
3.6	Intergenerational trade offs	73
3.7	International aspects	74
3.8	Instruments of environmental policy	75
3.9	The impact of new technology	81
3.10	Optimal policy mix and conflicting objectives	82
3.11	Environmental benefits	84
4	THE ECONOMIC IMPACT OF ENVIRONMENTAL POLICY	93
4.1	Introduction	93
4.2	Emission taxes versus direct regulation	94
4.3	Tradeable pollution rights	97
4.4	Pollution prevention pays	99
4.5	Emission reduction by energy conservation and renewable energy	99
4.6	Recycling and deposit systems	101
4.7	Changes in the production and consumption pattern	104
4.8	Environmental quality indicators	105
4.9	The impact analysis of environmental policy in an empirical model	110
5	A SECTORAL MODEL FOR ENVIRONMENTAL POLICY ANALYSIS	115
5.1	Introduction	115
5.2	Input-output models	116
5.3	Block I Production	121
5.4	Block II Expenditures and imports	123
5.5	Block III Prices and wages	137
5.6	Block IV The labour market and production capacity	143
5.7	Block V Government and social security	153

5.8	Block VI Incomes	157
5.9	Block VII Monetary aspects	159
5.10	Block VIII Environment and energy	159
5.11	Model applications	164
	APPENDIX I to Chapter 5:	166
	Technical and expenditure coefficients of MEPA	166
6	MODEL APPLICATION: GLOBAL WARMING AND CARBON DIOXIDE EMISSIONS	169
6.1	Introduction	169
6.2	Global warming	170
6.3	The Base Case	180
6.4	Sensitivity analysis	191
6.5	Policy measures for CO ₂ emission reduction	205
6.6	Conclusions	226
7	ECONOMICS OF TRANSBOUNDARY AIR POLLUTION IN EUROPE	229
7.1	Introduction	229
7.2	Optimal abatement strategies	230
7.3	Structure of the optimization model	232
7.4	Reference projection	235
7.5	Full-cooperation: abatement and damage cost minimization	238
7.6	The critical loads approach	245
7.7	A differentiated critical loads approach	249
7.8	An example of a coalition	252
7.9	Conclusions	255

APPENDIX I to Chapter 7:

257

Receptor-emittor matrix for SO₂

8 ₀	CONCLUSIONS	259
	8.1 Introduction	259
	8.2 The theory of environmental economics	259
	8.3 Environmental policy instruments	262
	8.4 Economic environmental modelling	264
	8.5 On global warming and carbon dioxide emission reduction	265
	8.6 On acidification in Europe	267
	8.7 On the scope of this study	268
