

GAMES AND INFORMATION

An Introduction to Game Theory

Second Edition

Eric Rasmusen

Indiana University

 **BLACKWELL**
Cambridge MA & Oxford UK

Contents

Preface	ix
Contents and Purpose	ix
Changes in the Second Edition	xi
Using the Book	ix
The Level of Mathematics	x
Other Books	xi
Acknowledgements	xiii
Introduction	1
History	1
Game Theory's Method	2
Exemplifying Theory	2
This Book's Style	4
Notes	6
PART I GAME THEORY	7
1 The Rules of the Game	9
1.1 Basic Definitions	9
1.2 Dominant Strategies: The Prisoner's Dilemma	16
1.3 Iterated Dominance: Battle of Bismarck Sea	19
1.4 Nash Equilibrium: Boxed Pigs, Battle of the Sexes, and Ranked Coordination	22
1.5 Focal Points	28
Notes	29
Problems	32
2 Information	35
2.1 Strategic and Extensive Forms of a Game	35
2.2 Information Sets	40
2.3 Perfect, Certain, Symmetric, and Complete Information	45
2.4 The Harsanyi Transformation and Bayesian Games	48
2.5 Example: The Png Settlement Game	57
Notes	62
Problems	63
	v

3	Mixed and Continuous Strategies	67
3.1	Mixed Strategies: The Welfare Game	67
3.2	Chicken, The War of Attrition, and Correlated Strategies	72
3.3	Mixed Strategies with General Parameters and N Players: The Civic Duty Game	77
3.4	Randomizing versus Mixing: The Auditing Game	81
3.5	Continuous Strategies: The Cournot Game	83
	Notes	86
	Problems	89
4	Dynamic Games with Symmetric Information	93
4.1	Subgame Perfectness	93
4.2	An Example of Perfectness: Entry Deterrence I	96
4.3	Credible Threats, Sunk Costs, and the Open-Set Problem in the Game of Nuisance Suits	98
4.4	Recoordination of Pareto-Dominant Equilibria in Subgames: Pareto Perfection	106
4.5	Discounting	108
4.6	Evolutionary Equilibrium: The Hawk-Dove Game	110
	Notes	115
	Problems	116
5	Reputation and Repeated Games with Symmetric Information	121
5.1	Finitely Repeated Games and the Chainstore Paradox	121
5.2	Infinitely Repeated Games, Minimax Punishments and the Folk Theorem	123
5.3	Reputation: The One-Sided Prisoner's Dilemma	129
5.4	Product Quality in an Infinitely Repeated Game	131
5.5	Markov Equilibria and Overlapping Generations in the Game of Customer Switching Costs	135
	Notes	137
	Problems	140
6	Dynamic Games with Asymmetric Information	143
6.1	Perfect Bayesian Equilibrium: Entry Deterrence II and III	143
6.2	Refining Perfect Bayesian Equilibrium: The PhD Admissions Game	148
6.3	The Importance of Common Knowledge: Entry Deterrence IV and V	152
6.4	Incomplete Information in the Repeated Prisoner's Dilemma: The Gang of Four Model	154
6.5	The Axelrod Tournament	156
	Notes	158
	Problems	159
PART II ASYMMETRIC INFORMATION		163
7	Moral Hazard: Hidden Actions	165
7.1	Categories of Asymmetric Information Models	165
7.2	A Principal-Agent Model: The Production Game	169

7.3	Finding Optimal Contracts: The Three-Step Procedure and the Incentive Compatibility and Participation Constraints	175
7.4	Optimal Contracts: The Broadway Game	177
7.5	State-Space Diagrams: Insurance Games I and II	182
	Notes	187
	Problems	191
8	Topics in Moral Hazard	195
8.1	Pooling versus Separating Equilibria and the Revelation Principle	195
8.2	An Example of Moral Hazard with Hidden Knowledge: The Salesman Game	199
8.3	Renegotiation of Contracts: The Repossession Game	203
8.4	Efficiency Wages	206
8.5	Tournaments	207
8.6	Institutions and Agency Problems	209
8.7	Teams	213
	Notes	216
	Problems	219
9	Adverse Selection	223
9.1	Introduction: Production Game VII	223
9.2	Adverse Selection under Certainty: Lemons I and II	224
9.3	Heterogeneous Tastes: Lemons III and IV	228
9.4	Adverse Selection under Uncertainty: Insurance Game III	231
9.5	Other Equilibrium Concepts: Wilson Equilibrium and Reactive Equilibrium	235
9.6	The Groves Mechanism	237
9.7	A Variety of Applications	239
	Notes	242
	Problems	245
10	Signalling	249
10.1	The Informed Player Moves First: Signalling	249
10.2	Variants on the Signalling Model of Education	253
10.3	General Comments on Signalling in Education	257
10.4	The Informed Player Moves Second: Screening	259
10.5	Two Signals: The Game of Underpricing New Stock Issues	265
	Notes	269
	Problems	270
PART III APPLICATIONS		273
11	Bargaining	275
11.1	The Basic Bargaining Problem: Splitting a Pie	275
11.2	The Nash Bargaining Solution	276
11.3	Alternating Offers over Finite Time	279
11.4	Alternating Offers over Infinite Time	281
11.5	Incomplete Information	284
	Notes	289
	Problems	290

12	Auctions	293
12.1	Auction Classification and Private-Value Strategies	293
12.2	Comparing Auction Rules	298
12.3	Common-Value Auctions and the Winner's Curse	300
12.4	Information in Common-Value Auctions	303
	Notes	304
	Problems	306
13	Pricing	309
13.1	Quantities as Strategies: Cournot Equilibrium Revisited	309
13.2	Prices as Strategies: Bertrand Equilibrium	314
13.3	Location Models	319
13.4	Comparative Statics and Supermodular Games	325
13.5	Durable Monopoly	330
	Notes	335
	Problems	338
14	Entry	341
14.1	Innovation and Patent Races	341
14.2	Signal Jamming	348
14.3	Predatory Pricing: The Kreps-Wilson Model	352
14.4	Entry for Buyout	355
	Notes	359
15	The New Industrial Organization	361
15.1	Credit and the Age of the Firm: The Diamond Model	361
15.2	Takeovers and Greenmail	364
15.3	Market Microstructure	369
15.4	Rate of Return Regulation and Government Procurement	373
	Appendix A: Answers to Odd-Numbered Problems	381
	Appendix B: Mathematics	429
	Notation	429
	Glossary	433
	Risk	436
	Supermodularity	439
	References and Name Index	441
	Index	000
