Contents

Preface	ix
CHAPTER 1	
Introduction	1
A. Historical Background	1
B. Water Resources Engineering	6
References	12
CHAPTER 2	
The Systems Approach to Water Resources Problems	15
References	27
CHAPTER 3	
Problems in Water Resources Engineering	30
A. Development Problems	30
B. Design Problems	36
C. Operational Problems	41
D. Recapitulation	47
References	48
CHAPTER 4	
Some Probabilistic Methods Applied in Water Resources	52
A. Statistical Applications	52
B. Stochastic Processes and Water Storage	55
C. Storage Control Problems	72
References	81

CHAPTER 5

Applications of Linear Programming	84
A. General	84
B. Water Quality Management	85
C. Design and Operation of Reservoirs	93
D. Aquifer Management	105
E. Summary	112
References	112

CHAPTER 6

Dynamic Programming	114
A. Sequential Decision Processes	114
B. Recurrence Relationships	115
C. The Principle of Optimality	119
D. One-Dimensional Allocation Processes	120
E. Multidimensional Allocation Processes	123
F. Optimization in Space	125
G. Optimization in Time	126
H. Conclusion	139
References	141

CHAPTER 7

Applications of Dynamic Programming in Water Resources Engineering	142
A. General	142
B. General Design Applications	143
C. Storage Regulation	149
D. Conjunctive Use of Surface and Groundwater Resources	155
E. Multistructure and Multipurpose Systems	171
F. Pumped Storage	176
References	179

CHAPTER 8

Simulation Methods for the Design of Water Resource Systems	182
A. Introduction	182
B. The Monte Carlo Method.	183
C. Generation of Synthetic Streamflow Data	187
D. Examples of Simulation Studies	189
References	192

CHAPTER 9

Conclusion	193
Reference	197
Author Index	199
Subject Index	203
