Dynamics of Environmental Bioprocesses

Modelling and Simulation

Weinheim · New York
Basel · Cambridge · Tokyo

Table of Contents

Preface	V
Organisation of the Book	VI
ISIM Simulation Software	VIII
Acknowledgements	VIII
Nomenclature for Chapters 1 and 2	XIX
1 Modelling Principles	1
1.1 The Role of Modelling in Environmental Technology	1
1.2 General Aspects of the Modelling Approach	3
1.3 Model Classification	4
1.3.1 Deterministic Models	4
1.3.2 Stochastic Models	5
1.3.3 Steady-State Models	5
1.3.4 Dynamic Models	6
1.4 General Modelling Procedure	6
1.5 Simulation Tools	7
1.6 ISIM	10
1.7 Introductory ISIM Example: WASTE	11
1.8 Formulation of Dynamic Balance Equations	14
1.8.1 Mass Balance Procedures	15
1.8.1.1 Case A. Continuous Stirred-Tank Reactor	17
1.8.1.2 Case B. Tubular Reactor	18
1.8.1.3 Case C. River with Eddy Current	18
1.8.1.4 Rate of Accumulation Term	21
1.8.1.5 Convective Flow Terms	22
1.8.1.6 Production Rate	23
1.8.1.7 Diffusion of Components	24
1.8.1.8 Interphase Transport	25
1.8.1.9 Case A. Waste Holding Tank: Total and Component Mass Balance Example	26
1.8.1.10 Case B. The Plug-Flow Tubular Reactor	28
1.8.1.11 Case C. Biological Hazard Room	30
1.8.1.12 Case D. Lake Pollution Problem	35
1.8.2 Energy Balancing	40

1.8.2.1	Case A. Determining Heat Transfer Area or Cooling Water Temperature	43
1.8.2.2	Case B. Heating of a Filling Tank	44
1.9	Chemical and Biological Reaction Systems	45
1.9.1	Modes of Reactor Operation	45
1.9.1.1	Batch Reactors	45
1.9.1.2	Semi-Continuous or Fed-Batch Operation	47
1.9.1.3	Continuous Operation	48
1.9.2	Reaction Kinetics	50
1.9.2.1	Chemical Kinetics	50
1.9.2.2	Biological Reaction Kinetics	52
1.9.2.3	Simple Microbial Growth Kinetics	53
1.9.2.4	Substrate Uptake Kinetics	56
1.9.2.5	Substrate Inhibition of Growth	57
1.9.2.6	Additional Forms of Inhibition	59
1.9.2.7	Other Expressions for Specific Growth Rate	59
1.9.2.8	Multiple-Substrate Kinetics	61
1.9.2.9	Structured Kinetic Models	62
1.9.2.10	Interacting Micro-Organisms	62
1.10	Modelling of Bioreactor Systems	65
1.10.1	Stirred Tank Reactors	65
1.10.2	Modelling Tubular Plug-Flow Reactor Behaviour	67
1.10.2.1	Steady-State Balancing	67
1.10.2.2	Unsteady-State Balancing	68
1.11	Mass Transfer Theory	70
1.11.1	Phase Equilibria	70
1.11.2	Interphase Mass Transfer	70
1.11.2.1	Case A. Steady-State Tubular and Column Modelling	72
1.11.3	Case Studies	73
1.11.3.1	Case A. Aeration of a Tank of Water	73
1.11.3.2	Case B. Biological Oxidation in an Aerated Tank	75
1.11.3.3	Case C. Determination of Biological Oxygen Uptake Rates by a Dynamic Method	77
1.11.4	Gas-Liquid Phase Transfer Across a Free Surface	78
1.12	Diffusion and Biological Reaction in Solid Phase Biosystems	79
1.12.1	External Mass Transfer	82
1.12.2	Finite Difference Model for Internal Transfer	83
1.12.3	Case Studies for Diffusion with Biological Reaction	86
1.12.3.1	Case A. Estimation of Oxygen Diffusion Effects in a Biofilm	86
1.12.3.2	Case B. Biofilm Nitrification	87
1.13	Process Control	90
1.14	Optimisation, Parameter Estimation and Sensitivity Analysis	94
1.14.1	Case A. Estimation of Bioreaction Kinetic Parameters for Batch Degradation Using ESL and SIMUSOLV	96

2	Environmental Bioprocess Descriptions	103
2.1	Wastewater Treatment Processes	103
2.1.1	Wastewater Characteristics	103
2.1.2	Physical Characteristics and Analyses of Wastewater	106
2.1.2.1	Total Suspended Solids	106
2.1.2.2	Volatile Suspended Solids	106
2.1.2.3	Temperature	107
2.1.2.4	Other Physical Parameters	107
2.1.3	Chemical Characteristics and Analyses of Wastewater	108
2.1.3.1	Biochemical Oxygen Demand	108
2.1.3.2	Chemical Oxygen Demand	109
2.1.3.3	Total Organic Carbon	110
2.1.3.4	Nitrogen Analyses	111
2.1.3.5	Kjeldahl Total Nitrogen Test	111
2.1.3.6	Phosphorus	112
2.1.4	Biological Characteristics and Analyses of Wastewater	112
2.1.4.1	Pathogenic Micro-Organisms	113
2.1.4.2	Pollution Indicator Organisms	113
2.1.4.3	Micro-Organisms Responsible for Biological Treatment	113
2.2	Primary Treatment Processes	114
2.2.1	Equalisation	114
2.2.2	Neutralisation	115
2.2.3	Sedimentation	115
2.2.3.1	Discrete Settling	115
2.2.3.2	Flocculent Settling	116
2.2.3.3	Zone Settling	117
2.2.3.4	Coagulating Agents	117
2.2.4	Flotation	117
2.3	Secondary Treatment Processes	118
2.3.1	The Activated Sludge Process	118
2.3.1.1	Biology of the Activated Sludge Process	119
2.3.1.2	Process Analysis	119
2.3.1.3	Modifications of the Activated Sludge Process	120
2.3.2	Aerobic Fixed Film Processes	121
2.3.2.1	Trickling Filters	122
2.3.2.2	Fluidised Sand Beds	122
2.3.2.3	Rotating Biological Contactors	124
2.3.3	Anaerobic Treatment Processes	124
2.3.3.1	Reactions and Stoichiometry in Anaerobic Digestion	125
2.3.3.2	Modelling Anaerobic Reactors	125
2.3.3.3	Response Dynamics of Anaerobic Reactors	129
2.3.3.4	Control of Anaerobic Reactors	130
2.3.3.5	Anaerobic Reactor Design	134

2.3.4	Biofilms and Flocs	135
2.3.4.1	Formation of Biofilms	136
2.3.4.2	Modelling Biofilms	138
2.3.4.3	Bioflocs	139
2.4	Tertiary Treatment Processes	140
2.4.1	Grass Plots	140
2.4.2	Lagoons	141
2.4.3	Filters	141
2.4.4	Microstrainers	142
2.4.5	Membrane Technology	142
2.5	Water Pollution Modelling	146
2.5.1	Eutrophication of Lakes and Reservoirs	146
2.5.1.1	Factors Influencing Lake Productivity	147
2.5.1.2	Consequences of Eutrophication	151
2.5.1.3	Eutrophication Models	153
2.5.1.4	Prevention and Reversal of Eutrophication	155
2.5.2	Discharge of Pollutants into Rivers and Streams	157
2.5.2.1	Modifications to the Streeter-Phelps Theory	158
2.5.2.2	Surface Reaeration	159
2.5.2.3	River Parameters	160
2.5.2.4	Photosynthesis and Respiration of Green Plants and Algae	161
2.5.3	Groundwater Pollution	161
2.5.3.1	Sources of Groundwater Pollution	163
2.5.3.2	Modelling Groundwater Pollution	165
2.5.3.3	Nitrates in Groundwater	168
2.6	Solid Waste Treatment and Disposal	169
2.6.1	Sources of Solid Wastes	169
2.6.1.1	Municipal Solid Waste	169
2.6.1.2	Waste Sludge	170
2.6.2	Sludge Processing and Disposal	171
2.6.2.1	Summary of Disposal Methods	171
2.6.2.2	Sludge Thickening and Dewatering	172
2.6.2.3	Use of Sludge on Agricultural Land	172
2.6.2.4	Dumping at Sea and Pipeline Discharges	172
2.6.3	Composting	173
2.6.3.1	Composting Processes	173
2.6.3.2	Compost Ecology	174
2.6.3.3	Process Factors	175
2.6.4	Disposal of Municipal Solid Waste	177
2.6.4.1	Microbiology of Landfill Gas Production	177
2.6.4.2	Landfill Gas Production	179
2.6.5	Anaerobic Digestion	181
2.6.5.1	Reactor Conditions	181
2.6.5.2	Comparison with Landfill Sites	181

2.7	References for Chapters 1 and 2	182
2.8	Recommended Textbooks and References for Further Reading	187
2.9	Glossary	192
3	Simulation Examples of Environmental Bioprocesses	201
3.1	Introductory Examples	201
3.1.1	BASIN – Dynamics of an Equalisation Basin	201
3.1.2	OXSAG – Classic Streeter-Phelps Oxygen Sag Curves	206
3.2	Basic Biological Reactor Examples	210
3.2.1	BATREACT – Batch Growth and Substrate Uptake	210
3.2.2	CONTANK – Continuous Tank Reactor Startup and Operation	214
3.2.3	SEMIBAT – Semi-Batch Reactor with Batch Startup	218
3.2.4	UPTAKE – Substrate Uptake with Monod Kinetics	221
3.2.5	OXIBAT – Oxidation of Substrate in an Aerated Tank	223
3.2.6	RESPMET – Oxygen Uptake Experiment with Respirometer	226
3.2.7	REPEAT – Repeated Fed-Batch Culture	229
3.2.8	CONTI – Continuous Reactor with Substrate Uptake	233
3.2.9	FEEDINH – Control of Inhibitory Substrate Feed Rate to a Continuous Reactor	235
3.2.10	CONINHIB – Continuous Bioreactor with Inhibitory Substrate	239
3.3	Activated Sludge Wastewater Treatment Processes	244
3.3.1	ANDREWS – Model of a Batch Activated Sludge Process	244
3.3.2	ASCSTR – Continuous Stirred Tank Reactor Model of Activated Sludge	247
3.3.3	ASPLUG – Plug-Flow Model of an Activated Sludge Process	250
3.3.4	CURDS – Curds' Model of Sludge Ecology	254
3.3.5	FLOC1 and FLOC2 Diffusion and Reaction in a Sludge Floc	260
3.3.6	ASTEMP – Temperature Gains and Losses in an Activated Sludge Process	264
3.3.7	STEPFEED – Step Feed Activated Sludge Process with Structured Kinetics	270
3.3.8	SETTLER – Solids-Liquid Separation in a Continuous Settler	275

3.4	Fixed Film Reactors for Wastewater Treatment	280
3.4.1	ROTATE – Model of a Rotating Biological Disc Reactor	280
3.4.2	TRICKLE – Model of a Trickle Filter	284
3.4.3	BIOFILM – Biofilm Tank Reactor	288
3.5	Nitrification of Wastewater	292
3.5.1	ACTNITR – Nitrification in a Single-Stage Activated Sludge System	292
3.5.2	AMMONOX – Continuous Nitrification with Immobilised Biomass	296
3.5.3	AMMONFED – Fed-Batch Nitrification with Immobilised Biomass	300
3.5.4	NITBED – Nitrification in a Fluidised Bed Reactor	302
3.6	Primary Treatment of Wastewater	307
3.6.1	SEDIMENT – Removal of Solids in a Sedimentation Tank	307
3.6.2	LAGOON – Aerated Lagoon for the Treatment of Industrial Wastewaters	311
3.7	Tertiary Water Treatment Processes	315
3.7.1	FILTER – Tertiary Water Treatment by Filtration	315
3.8	Sludge Disposal and Processing	319
3.8.1	COMPOST – Microbial Kinetics in a Continuous Compost Reactor	319
3.8.2	WINDROW – Batch Windrow Compost Process	329
3.9	Biodegradation Processes	332
3.9.1	PCPDEG and PCPDEGCF – Batch and Continuous Biodegradation of Pentachlorophenol by Mixed Cultures	332
3.9.2	BIOFILT1 and BIOFILT2 – Biofiltration Column for Removing Ketones from Air	335
3.9.3	DCM1 and DCM2 – Airlift Biofilm Sandbed for Dichloromethane-Waste Air Treatment	341
3.9.4	FBR – Biofilm Fluidised Bed with External Oxygen Supply	347
3.10	Anaerobic Digestion Processes	350
3.10.1	ANAEROBE – Andrew's Model of Anaerobic Digestion	350
3.10.2	WHEY – Model for the Anaerobic Degradation of Whey	357

3.11	Anaerobic Fixed Film Processes	363
3.11.1	DENITRIF – Denitrification of Drinking Water in a Fluidised Bed Reactor	363
3.11.2	MOLASSES – Anaerobic Degradation of Molasses in a Packed Bed Reactor	366
3.12	Microbial Interaction Kinetics	373
3.12.1	MIXPOP – Predator-Prey Population Dynamics	373
3.12.2	TWOONE – Competition Between Organisms	376
3.12.3	COMPETE – Lotka-Volterra Model of Competition	378
3.13	Ecological Population Studies	380
3.13.1	BLOWFLY – Cycling Populations of the Australian Blowfly	380
3.13.2	BUDWORM – Dynamics of the Growth of the Spruce Budworm in Canada	382
3.14	River and Stream Modelling	387
3.14.1	RIVER – Dissolved Oxygen and BOD Dynamic Profiles along a River	387
3.14.2	STREAM – One-Dimensional Steady-State Model of Aeration and Degradation in a Stream	391
3.14.3	DISCHARG – Dissolved Oxygen and BOD Steady-State Profiles along a River	396
3.15	Lake and Reservoir Modelling	400
3.15.1	NCYCLE – Nitrogen Cycles in a Reservoir in Slovakia	400
3.15.2	PCYCLE – Phosphorus Cycles in a Lake	408
3.15.3	ALGAE – Algal Growth in a Deep Lake in Canada	414
3.15.4	EUTROPH – Eutrophication in a Shallow Lake in Hungary	421
3.15.5	METAL – Transport of Heavy Metals in Water Column and Sediments	429
3.16	Land Pollution Modelling	433
3.16.1	LANDFILL – One-Dimensional Transport of Pollutant from a Landfill Site	433
3.16.2	LEACH – One-Dimensional Transport of Solute Through Soil	437
3.16.3	SOIL – Bioremediation of Soil Particles	443
3.17	Miscellaneous Examples	449
3.17.1	DEADFISH – Distribution of an Insecticide in an Aquatic Ecosystem	449
3.17.2	GAIA – The Parable of Daisyworld	452
3.17.3	CABBAGE – Structured Growth of the White Cabbage	456

Appendix: Instructions for Using ISIM	461
1. ISIM Installation Procedure	461
2 Programming with ISIM	462
2.1 Getting Started	462
2.2 Reading Files From Disk	462
2.3 Running Simulations	462
2.4 Interacting with ISIM Simulations	463
2.5 Editing ISIM Files	463
2.6 Writing ISIM Models	464
2.7 ISIM Statements and Functions	466
2.8 Output	467
2.9 Useful Sequences of Statements	469
2.10 Further Information	470
3 Summary of ISIM Commands	470
3.1 COMMAND and INPUT modes	470
3.2 ISIM Commands	470
3.3 ISIM Program Statements	474
4 ISIM Error Messages	477
4.1 Monitor and Syntax Failures	478
4.2 Compilation Failures	479
4.3 Execution Phase Errors	480
5 Quick Reference to Common ISIM Commands	481
Index	483
