<i>FOREWORD</i>		XIII
Chapter 1. Edward Cook and Hubert van Lier		
Landscape planning and ecological networks: an introduction		1
1.1 Purpose of this book		1
1.2 Overview of important concepts		2
1.3 Perspective and contents		4
1.4 Collaboration in approaching ecological network planning		8
Chapter 2. Isaak Zonneveld		
Landscape ecology and ecological networks		13
2.1 Introduction		13
2.2 The holistic landscape concept		14
2.3 Landscape-ecological relations		17
2.4 Planning and homeorhesis		18
2.5 The role of landscape ecology in designing and maintaining ecological networks		20
Chapter 3. Frank van Langevelde		
Conceptual integration of landscape planning and landscape ecology, with a focus on the Netherlands		27
3.1 Introduction		27
3.2 Landscape ecological planning in the Netherlands		28
3.2.1 Retrospective analysis of the evolution of an ecological approach in landscape planning for nature		29
3.2.2 Emerging landscape ecology based landscape planning		34
3.3 Key connecting issues between landscape planning and landscape ecology		36
3.3.1 Landscape and its processes as subject of study		36
3.3.2 An holistic and interdisciplinary approach		37
3.3.3 Scale issues and the hierarchy paradigm		38
3.3.4 Recognition of human influences in the landscape		39

3.4	Landscape ecology and its role in landscape planning	40
3.5	Spatial concepts in landscape planning for nature	44
3.5.1	Spatial concepts and their functions in landscape planning	44
3.5.2	Development of spatial concepts in landscape planning for nature in the Netherlands	45
3.5.3	Spatial concept of ecological networks	53
3.5.4	Landscape ecology based spatial guidelines for planning ecological networks	57
3.6	Discussion and conclusions	59
Chapter 4.	Peter Vrijlandt and Klaas Kerkstra	
	A strategy for ecological and urban development	71
4.1	Questions about networks	71
4.1.1	The tendency for network thinking	71
4.1.2	The ecological network	72
4.1.3	The urban network	75
4.1.4	The urban network overrules the ecological network	79
4.2	Searching for an integrated ecological-urban planning concept	80
4.3	Conclusions	85
Chapter 5.	Uwe Starfinger and Herbert Sukopp	
	Assessment of urban biotopes for nature conservation	89
5.1	Introduction	89
5.2	Ecological research in towns and cities	89
5.3	History of human influence on urban biotopes	93
5.4	The wealth of urban biotopes	94
5.5	Bioindication and methods of urban biotope mapping	97
5.6	Urban nature conservation	103
5.6.1	The role of vegetation in urban planning	103
5.6.2	Species conservation	103
5.6.3	Nature conservation practice	104
5.6.4	Planning principles	107
5.6.5	Planning practice	109

Chapter 6	Michaël van Buuren	
	The hydrological landscape structure as a basis for network formulation; a case study for the Regge catchment (NL)	117
6.1	Introduction	117
6.2	The hydrological landscape structure of the Regge catchment	119
6.2.1	The hydrological landscape structure	119
6.2.2	The regional hydrological systems analysis	122
6.2.3	The historic hydrological situation	122
6.2.4	The present hydrological situation	124
6.3	The development of wetlands in the Regge catchment	125
6.4	The planning of a network of nature areas	125
6.4.1	Problem statement	127
6.4.2	Planning objectives	127
6.4.3	Applying the hydrological landscape structure	127
6.4.4	The core of the network	129
6.4.5	The completion of the network: the strategic position of wetlands in exfiltration zones	130
6.4.6	The network of nature areas for the Regge catchment	132
6.5	Conclusions	134
Chapter 7.	Adri Dietvorst and Peter van Bolhuis	
	Design principles for a combination of recreation and nature	137
7.1	Recreation, tourism and nature: a theoretical framework	137
7.1.1	Introduction	137
7.1.2	In pursuit of long term trends in leisure behavior	139
7.1.3	The model	140
7.1.4	General dimensions for quality and sustainability	142
7.2	From theory to practice: Case-study 'Gelderse Poort'	144
7.2.1	Case study: "Gelderse Poort"	144
7.2.2	Planning conditions	147
7.2.3	Description of proposals	151
7.3	Conclusion	157

VIII

Chapter 8. Jack Ahern

Greenways as ecological networks in rural areas

- 8.1 Introduction
- 8.2 Landscape ecology and greenway planning
- 8.3 Case study: Quabbin Reservoir to Wachusett Mountain Reservation
- 8.4 Resource assessments for collateral benefits
 - 8.4.1 Social-cultural resources
 - 8.4.2 Visual-aesthetic resources
 - 8.4.3 Development suitability
- 8.5 Planning the greenway network
- 8.6 Tools and options for implementation of the greenway network
 - 8.6.1 Acquisition techniques
 - 8.6.2 Regulatory techniques
 - 8.6.3 Voluntary techniques

Chapter 9. Lawrence Baschak and Robert Brown

River systems and landscape networks

- 9.1 Introduction
- 9.2 Approaches to ecological design
- 9.3 An ecological design framework
 - 9.3.1 Assessment of natural and cultural resources
 - 9.3.2 Formation of river corridor's spatial structure (corridor network)
 - 9.3.3 Corridor network components
 - 9.3.4 Overview of the Environmental Design Framework (EDF)
- 9.4 Application to a river valley corridor
 - 9.4.1 Application of the evaluation component
 - 9.4.2 Implications of landscape element evaluation
- 9.5 Implications for design and management
- 9.6 Discussion

Chapter 10. Craig Shafer

Beyond park boundaries

- 10.1 Some parks are ecologically incomplete
- 10.2 Many parks may be too small
- 10.3 Parks are becoming isolated
- 10.4 Parks are being impacted by industrial society
- 10.5 Parks are being impacted by adjacent poverty
- 10.6 Parks may suffer from climate changes

10.7	The U.S. landownership dilemma	209
10.8	Cooperation or regulation	210
10.9	The issue of authority	211
10.10	Politics and land use planning	212
10.11	Conclusion	214
10.12	Nature reserve system design: simplicity within complexity?	215
11.	Jette Hansen-Møller	
	Recreation, reproduction and ecological restoration in the Greater Copenhagen region	225
11.1	Introduction	225
11.2	The Danish landscape in a historical perspective	226
11.3	The planning system	227
11.4	Previous conservation planning	227
11.5	Background for the planning concept	228
11.6	Endangered species of mankind	230
11.7	A common planning matrix	231
11.8	Landscape cohesion, structures and migration corridors	231
11.9	Dispersal corridor for birds along Pøle River	234
11.10	Dispersal corridor for amphibians in Ejby	238
11.11	General effects, perspectives and recommendations	240
11.12	Discussion	242
11.13	Philosophical considerations and consequences	244
12.	Michael Kleyer	
	Habitat network schemes in Stuttgart	249
12.1	Introduction	249
12.2	Strategies for nature conservation	249
12.3	Habitat networks	251
12.3.1	The scientific discussion	251
12.3.2	Different habitat networks in different landscapes	253
12.4	Nature conservation by habitat networks in the Stuttgart Metropolitan Area	256
12.4.1	Landscape situation	256
12.4.2	Steps in planning habitat networks	258
12.4.3	Regional planning level	259
12.4.4	Local planning level	264

- 12.4.5 Experiences from the regional habitat network scheme
- 12.5 Comments and acknowledgements

Chapter 13. Chris Baines and Nerys Jones
Urban forestry and landscape networks of the Black Country, England

- 13.1 The history of the region
- 13.2 Ecological survey
- 13.3 Urban wildspace
- 13.4 Popular nature conservation
- 13.5 Nature conservation strategy
- 13.6 Local government reorganization
- 13.7 Partnership
- 13.8 The Black Country Urban Forestry Unit
 - 13.8.1 Creation of the Unit
 - 13.8.2 Quantifying the existing forest
- 13.9 Strategic approach
- 13.10 Demonstration schemes
- 13.11 Urban forestry and development
- 13.12 Value for money
- 13.13 Good technical practice
- 13.14 The wider benefits of urban forestry
- 13.15 The need for management
- 13.16 Conclusion

Chapter 14. Wim Lammers
A new strategy in nature policy: towards a national ecological network in the Netherlands

- 14.1 Introduction
- 14.2 Physical planning in the Netherlands
- 14.3 Diagnosis and analysis : the state of nature
- 14.4 Why a new strategy ?
 - 14.4.1 Sustainability
 - 14.4.2 Offensive approach
 - 14.4.3 Priority setting
- 14.5 The national ecological network
 - 14.5.1 Preparation (the working process)
 - 14.5.2 Description
 - 14.5.3 Realization
- 14.6 Experiences until now
 - 14.6.1 Success factors

14.6.2	Critical factors	301
14.7	Looking ahead	302
14.7.1	Systematic outline of quality objectives (target types and environmental conditions)	302
14.7.2	Network planning	306

Chapter 15. Rob Jongman

An ecological main structure for the European Union		309
15.1	Introduction	309
15.2	Nature conservation development as a basis	310
15.3	Design methods	314
15.4	Results	315
15.5	Discussion	322

Chapter 16. Hubert van Lier and Edward Cook

Ecological networks: a conspectus		327
16.1	Landscape planning and ecological networks	327
16.2	Why networks?	329
16.3	Spatial concepts and networks	334
16.3.1	Specific spatial concept in land use planning	334
16.3.2	Specific properties of ecological networks	341
16.4	The implementation of networks	341
