Preface xi

CHAPTER 1

The DBMS Matrix 1

- 1.1 A DBMS Classification Matrix 1
- 1.2 Quadrant 1: Simple Data without Queries 2
- 1.3 Quadrant 2: Simple Data with Queries 3
- 1.4 Quadrant 3: Complex Data without Queries 7
- 1.5 Quadrant 4: Complex Data with Queries 13
- 1.6 The DBMS Matrix Summarized 17
- 1.7 Why is Object-Relational the Next Great Wave? 18

CHAPTER 2

Characteristic 1: Base Data Type Extension 21

- 2.1 Need for Base Type Extension 21
- 2.2 A Better Way: Extensible Data Types 27
- 2.3 User-Defined Functions and Operators 30

2.4 Fully Object-Relational Type Extension	34
2.5 Summary	39

CHAPTER 3 *Examples of Base Type Extension* **41**

3.1 Geographic Information Systems Applications	41
3.2 Image Type Library Applications	44
3.3 Time Series Applications	45

CHAPTER 4 *Characteristic 2: Complex Objects* **49**

4.1 Type Constructors	49
4.2 Using Type Constructors	51
4.3 Base Types and Complex Objects	61
4.4 Summary	63

CHAPTER 5 *Other Type Constructors?* **65**

5.1 A Simple Array Example	66
5.2 Using Arrays to Support Aggregation	67
5.3 Summary	72

CHAPTER 6 *Characteristic 3: Inheritance* **73**

6.1 Data Inheritance	73
6.2 Inheritance of Functions	79
6.3 Summary	84

CHAPTER 7 *Characteristic 4: Rules* **87**

7.1 Update-Update Rules	88
7.2 Query-Update Rules	89
7.3 Update-Query Rules	90
7.4 Query-Query Rules	91

	7.5 Semantics: The Dark Side of Rules	93
	7.6 Summary	97
CHAPTER 8	<i>Object-Relational Parsing</i>	99
	8.1 How an Object-Relational Parser Works	99
	8.2 Summary	102
CHAPTER 9	<i>Traditional Relational Optimizers</i>	103
	9.1 How Relational Optimizers Work	103
	9.2 Performing the Restriction on the Table emp_R	105
	9.3 Methods for Processing the Join	110
CHAPTER 10	<i>Object-Relational Optimizers</i>	117
	10.1 Extension 1: Operator and Function Notation	118
	10.2 Extensions 2 and 3: B-Trees and User-Defined Comparison Operators	119
	10.3 Extension 4: User-Defined Selectivity Functions	121
	10.4 Extension 5: User-Defined Negators	122
	10.5 Extension 6: User-Defined Commutators	123
	10.6 Extension 7: Access Methods on a Function of the Data	123
	10.7 Extension 8: Smart Ordering of the Clauses in a Predicate	125
	10.8 Extension 9: Optimization of Expensive Functions	127
	10.9 Extension 10: User-Defined Access Methods	128
	10.10 Extension 11: “Flattening” Complex Object Queries	130

- 10.11 Extension 12: “In-Line” Sets 132
- 10.12 Extension 13: Indexes on Attributes of Sets 133
- 10.13 Extension 14: Optimization of Scans of Inheritance Hierarchies 133
- 10.14 Extension 15: Optimization of Joins over Inheritance Hierarchies 134
- 10.15 Summary 135

CHAPTER 11***Implementation of Rule Systems 137***

- 11.1 Support for Triggers 137
- 11.2 Extension to More General Rules 142

CHAPTER 12***Architectural Options for Commercial Vendors 145***

- 12.1 Strategy 1: Do Nothing 147
- 12.2 Strategy 2: Rewrite a Relational Engine from Scratch 147
- 12.3 Strategy 3: Incremental Evolution 149
- 12.4 Strategy 4: Write a Wrapper 150
- 12.5 Strategy 5: Write a Gateway 153
- 12.6 Strategy 6: An Object-Relational Top on a Relational Storage Manager 159
- 12.7 Strategy 7: Extend an Object-Oriented DBMS 161
- 12.8 Strategy 8: Glue an Object-Relational Engine onto a Persistent Language 162
- 12.9 Summary 163

CHAPTER 13***Multi-Quadrant Problems 165***

- 13.1 A Video Service Application 166
- 13.2 An Insurance Application 171

CHAPTER 14*Solutions to Multi-Quadrant Problems 175*

14.1 Upper-Left Primary Quadrant DBMS with a Lower-Left Secondary Quadrant 176

14.2 Lower-Right Primary DBMS with a Lower-Left Secondary Quadrant 177

14.3 Upper-Right Primary DBMS with a Lower-Left Secondary Quadrant 177

14.4 Lower-Right Primary DBMS with an Upper-Left Secondary Quadrant 178

14.5 Upper-Right Primary DBMS with an Upper-Left Secondary Quadrant 178

14.6 Upper-Left Primary DBMS with a Lower-Right Secondary Quadrant 179

14.7 Upper-Right Primary DBMS with a Lower-Right Secondary Quadrant 180

14.8 Upper-Left Primary DBMS with an Upper-Right Secondary Quadrant 180

14.9 Upper-Right Primary DBMS with a Lower-Right Secondary Quadrant 181

14.10 Applications in Three Quadrants 181

CHAPTER 15*Database Design for Object-Relational DBMSs 185*

15.1 Relational Database Design 185

15.2 Reasons for Problems 190

15.3 Challenges in Object-Relational Database Design 195

15.4 Summary 197

CHAPTER 16*The Next Great Wave in DBMS Technology 199*

16.1 Overview of the Book 199

16.2 Overview of the Object-Relational
Marketplace **202**

16.3 Summary **208**

References **209**

Index **213**
