Ac	know	ledgements	xiii
1.	Introduction		
	1.1	Definitions and classifications 1.1.1 Boundary tensioned membranes	3 5
		1.1.2 Pneumatic structures1.1.3 Pre-stressed cable nets and beams	10 12
	1.2	Design process of tension membranes	15
	1.3	Main features of tension membranes	17
	1.4	Conventional roofing forms versus tension membranes 1.4.1 <i>Common misconceptions relating to tension membrane</i> <i>design</i>	17 19
	1.5	Closing remarks	20
	Refe	rences	20
2.	Form	-finding	23
	2.1	General concepts. Nature's 'secrets'	23
	2.2	Concept of a 'minimal surface' — historical background	26
	2.3	Form-finding methodologies 2.3.1 Physical models	28 28

iii

		2.3.2 Computational models	29	
		2.3.3 Soap-film debate	31	
		2.3.4 Form-jinuing, or jorm-uncluring:	55	
	Refe	ences	36	
3.	Geon used	netrically non-linear behaviour. Solutions by commonly numerical methods	39	
	3.1	Geometric non-linearity	39	
	3.2.	Commonly used computational methods for the analysis of geometrically non-linear behaviour	41	
	3.3	Transient stiffness method	41	
		3.3.1 Static analysis of skeletal, 'linear' structures3.3.2 Static analysis of skeletal, 'non-linear' structures — why	42	
		<i>iterative computations are necessary</i> 3.3.3 <i>Transient stiffness method applied to static analysis of</i>	45	
		tension structures. Role of geometric stiffness	46	
	:	form-finding of tension structures	48	
		3.3.5 Evaluation of the transient stiffness method	50	
	3.4	Force density method	51	
		3.4.1 Application of the force density method	52	
		3.4.2 Numerical example	53	
		3.4.3 Matrix formulation of the force density method	54	
		3.4.4 Evaluation of the force density method	57	
	3.5	Dynamic relaxation method	57	
	3.6	Computational static analysis versus form-finding	58	
		3.6.1 Out-of-balance forces in static analysis and in form-finding	58	
		3.6.2 Elastic and geometric effects in static analysis and in form-finding	58	
	Refe	rences	59	
4.	Dynamic relaxation method			
	4.1	Dynamic relaxation method with viscous damping	62	
		4.1.1 Stability of the iterative solution	63	
		4.1.2 Critical viscous damping coefficient	65
