

PUBLIC INVESTMENT, THE RATE OF RETURN, AND OPTIMAL FISCAL POLICY

KENNETH J. ARROW
and
MORDECAI KURZ

PUBLISHED FOR RESOURCES FOR THE FUTURE, INC.
by The Johns Hopkins Press
Baltimore and London

CONTENTS

FOREWORD v

ACKNOWLEDGMENTS xi

THE FORMAT OF THE BOOK xii

SUMMARY xiii

1. The Basic Issues xiii
2. Economic Policy in a Mixed Economy xv
3. Investment Policy as Optimization over Time xvi
4. The Production and Valuation Assumptions xvii
5. The Publicly Optimal Policy xix
6. Controllability with Fixed Savings Ratio in the Private Sector xxii
7. Controllability with Perfectly Rational Consumers xxvi
8. Risk and the Rate of Return xxvii
9. Some Loose Ends xxviii

I. BASIC CONCEPTS FOR THE THEORY OF PUBLIC INVESTMENT 1

0. Introduction 1
1. The Special Nature of Social Investments 2
2. Decentralization and the Discount Factor Appropriate for Public Investments 5
3. The General Nature of Optimal Investment Policy 9
4. The Criterion Function 10
5. Some Basic Propositions of Neoclassical Growth Theory 14

II. METHODS OF OPTIMIZATION OVER TIME 26

0. Introduction 26
1. Dynamic Programming: Discrete Time, Finite Horizon 26
2. Dynamic Programming: Discrete Time, Infinite Horizon 30
3. Continuous Time, Finite Horizon: The Pontryagin Necessary Conditions 33
4. Continuous Time, Finite Horizon: Constraints Involving the State Variables 39

5. Continuous Time, Finite Horizon: The Sufficiency Theorem 43
6. Continuous Time, Infinite Horizon 45
7. Jumps in the State Variables 51

III. OPTIMAL INVESTMENT PLANNING IN A ONE-COMMODITY MODEL 58

0. Introduction 58
1. Optimization in the One-Sector Model: Informal Discussion 58
2. Optimization in the One-Sector Model: Application of the Pontryagin Maximum Principle 64
3. Interpretations and Approximations 73
4. Alternative Formulations of the Controls and Irreversibility of Investment 81
5. Increasing Returns 85

IV. OPTIMAL INVESTMENTS IN A TWO-SECTOR MODEL 87

0. Introduction 87
1. General Formulation 88
2. Optimal Growth under Constant Returns to Scale: General Analysis 90
3. Analysis of the Short-Run Equilibrium 93
4. Analysis of the Optimal Path 95
5. Balanced Growth 106
6. The Special Case $U_c \equiv 0$ 107
7. Irreversible Investment Decisions 110
8. Increasing Returns to Scale 110

V. OBJECTIVES, MARKETS, AND PUBLIC INSTRUMENTS 115

0. Introduction 115
1. Private and Social Objectives 116
2. Market Conditions 117
3. Controllability by Public Instruments 119
4. Second-Best Policy 121
5. The Accounting Identities of Resource Allocation and Public Policy 122

VI. OPTIMAL POLICY AND CONTROLLABILITY WITH IMPERFECT CAPITAL MARKETS 128

0. Introduction 128
1. The General Framework of Fixed-Savings-Ratio Models 128
2. Financing by Income Tax Alone: Controllability 130
3. Financing by Income Tax Alone: General Analysis of the Second-Best Policy 131
4. Financing by Income Tax Alone: Balanced Growth 134
5. Financing by Income Tax Alone: Dynamic Analysis 138
6. Financing Investment by Borrowing and Interest by Income Tax 144
7. Balanced Budget with Consumption and Savings Taxes 148
8. Financing by Borrowing and Taxes on Consumption and Savings 149
9. Appropriability of Return on Government Capital 151

VII. CONSUMER BEHAVIOR IN A PERFECT MARKET 153

- 0. Introduction 153
- 1. The Consumer's Feasibility Condition 155
- 2. Some Boundedness Assumptions 160
- 3. Private Sector Optimization and Some Implications 162
- Mathematical Appendix 169

VIII. CONTROLLABILITY OF PUBLIC POLICY IN PERFECT CAPITAL MARKETS 178

- 0. Introduction 178
- 1. Some General Characterizations of Controllability and Stability 180
- 2. Controllability Without Taxes 187
- 3. The Income Tax 188
- 4. The Consumption Tax 192
- 5. The Savings Tax 195
- 6. The Wages Tax 199
- 7. Controllability of Both Allocation and Debt With Two Taxes:
General Considerations 200
- 8. Controllability With a Tax on Wages and One Other Tax 201
- 9. Controllability With Two Taxes, Neither on Wages 203
- 10. Summary 206

Bibliography 209

Index 215
