# CONTENTS

<i>Introduction to the Series</i>	v
<i>Preface</i>	xi
<i>Topics and notation</i>	xv
<i>Introduction</i>	1
<i>Chapter 1. Calculus of variations</i>	13
1. The simplest problem	13
2. The Euler equation	16
3. Comments on the Euler equation; Legendre's necessary condition	25
4. Special cases	28
5. Different types of terminal conditions	31
6. Sufficient conditions	43
7. A more general optimality criterion	46
8. Several unknown functions	50
9. Piecewise differentiable solutions; Corner conditions; Existence	60
10. Generalizations	65
<i>Chapter 2. Optimal control theory without restrictions on the state variables</i>	69
1. A sketch of the problem	69
2. Precise assumptions; The main problems	72

3.	The Maximum Principle: Fixed time interval; One state and one control variable	74
4.	The Maximum Principle for problems with a fixed time interval	83
5.	The Maximum Principle and the calculus of variations	99
6.	Sufficient conditions for fixed time problems	103
7.	Some applications of the Arrow sufficiency theorem	112
8.	Existence theorems	131
9.	Variable final time problems	142
10.	General results on linear control problems	165
11.	A proof of the Maximum Principle in a special case	167
 <i>Chapter 3. Extensions</i>		 177
1.	Transversality conditions	177
2.	A more general optimality criterion	181
3.	Jumps in the state variables I	194
4.	Jumps in the state variables II	207
5.	Sensitivity results: Price interpretations	210
6.	Some further sensitivity results	219
7.	Infinite horizons	229
8.	Examples of infinite horizon problems	237
9.	Further results on infinite horizon problems	243
10.	Phase-space analysis	250
 <i>Chapter 4. Mixed constraints</i>		 269
1.	Preliminary considerations	270
2.	Necessary conditions. Existence	275
3.	Sufficient conditions	287
4.	Some extensions and some examples	291
 <i>Chapter 5. Pure state constraints</i>		 313
1.	Preliminary considerations	314
2.	Sufficient conditions	316
3.	Necessary conditions	331
4.	Non-triviality results	345
5.	Miscellaneous	349

<i>Chapter 6.</i>	Mixed and pure state constraints	357
1.	The main problem	357
2.	Some Mangasarian-type sufficiency results	358
3.	An Arrow-type sufficiency result	368
4.	Necessary conditions	372
5.	Infinite horizon problems	379
6.	Infinite horizon problems: Sufficient conditions	385
7.	Extensions: Scrap values and more general initial and terminal conditions	390
8.	Existence theorems	400
Appendix A.	Differential equations	411
Appendix B.	A few definitions and results	425
Answers to exercises		429
References		437
Lists of theorems, notes and examples		441
