|       |                                                                                   |    |
|-------|-----------------------------------------------------------------------------------|----|
| 1     | Introduction and Plan .....                                                       | 1  |
|       | <i>Eugene P. Dougherty</i>                                                        |    |
| 1.1   | Purpose and Scope of the Book .....                                               | 1  |
| 1.2   | Overview/Plan of the Book .....                                                   | 2  |
| 2     | The Importance of Temperature Control in Biochemical<br>Process Engineering ..... | 5  |
|       | <i>Stephen J. Lorbert and James P. Pike</i>                                       |    |
| 2.1   | Introduction .....                                                                | 5  |
| 2.2   | Temperature Control for Fermentation Based Production .....                       | 6  |
| 2.2.1 | Effect of Temperature on Microbial Systems .....                                  | 6  |
| 2.2.2 | Temperature Control Systems for Fermentation .....                                | 8  |
| 2.2.3 | Temperature Control for Media and Equipment<br>Sterilization .....                | 9  |
| 2.3   | Importance of Temperature for Product Purification Processes .....                | 10 |
| 2.3.1 | Effect of Temperature Product Stability and Purity .....                          | 10 |
| 2.2.2 | Effect of Temperature on Protein Purification Technology ...                      | 12 |
|       | References .....                                                                  | 16 |
| 3     | Nonisothermal Effects in Polymer Reaction Engineering .....                       | 19 |
|       | <i>Donald H. Sebastian</i>                                                        |    |
| 3.1   | Introduction .....                                                                | 19 |
| 3.2   | Basic Transport Theory .....                                                      | 19 |
| 3.3   | Characteristic Times .....                                                        | 21 |

|         |                                                                  |    |
|---------|------------------------------------------------------------------|----|
| 3.3.1   | Characteristic Times for Chemical Reaction                       | 22 |
| 3.3.2   | Characteristic Times for Heat Conduction                         | 23 |
| 3.3.3   | Characteristic Times for Heat Conduction with Surface Convection | 25 |
| 3.3.4   | Characteristic Times for Heat Generation by Viscous Dissipation  | 28 |
| 3.3.5   | Characteristic Times for Thermal Profile Development             | 31 |
| 3.4     | Polymerization Kinetics                                          | 32 |
| 3.4.1   | Random Propagation                                               | 34 |
| 3.4.2   | Step Propagation                                                 | 35 |
| 3.4.3   | Addition Propagation                                             | 36 |
| 3.5     | Reactor Analysis                                                 | 37 |
| 3.5.1   | Batch Reactors                                                   | 37 |
| 3.5.2   | Plug Flow Reactors                                               | 38 |
| 3.5.3   | Ideal Mixers                                                     | 38 |
| 3.5.4   | Unmixed Batch Reactor                                            | 39 |
| 3.5.5   | Continuous Tubular Reactor                                       | 39 |
| 3.6     | Temperature Effects in Polymerization Reactors                   | 40 |
| 3.6.1   | Lumped Parameter Runaway                                         | 41 |
| 3.6.1.1 | Thermal Ignition Theory                                          | 42 |
| 3.6.1.2 | Effect of Reactant Consumption                                   | 46 |
| 3.6.1.3 | Computational Studies                                            | 47 |
