5.1.3	DETERMINATION OF THE DIAGONAL MATRIX [C]	51
5.2	DESCRIPTION OF THE BOUNDARY ELEMENT AND THE CELL ELEMENT	54
5.3	NUMERICAL SCHEME APPLIED TO THE BEM EQUATIONS	58

PAGE

5.4 DETERMINATION OF DISPLACEMENTS, ROTATIONS AND SECTION FORCES 64

5.4.1 DETERMINATION OF THE DEFLECTION, THE ROTATIONS AND THE SECTION FORCES IN AN INTERNAL ARBITRARY POINT IN THE PLATE 69

6. NUMERICAL EXAMPLES 71

6.1 TORSION OF A SQUARE PLATE 71

6.2 A CIRCULAR PLATE WITH A CONCENTRATED TRANSVERSE FORCE IN THE CENTER 77

6.3 A UNIFORM TRANSVERSE LOADED CIRCULAR CLAMPED PLATE WITH A HOLE IN THE CENTER 83

6.4 BENDING OF AN INFINITE PLATE WITH A CIRCULAR HOLE 91

7. THE BOUNDARY ELEMENT METHOD APPLIED TO THE THEORY OF GEOMETRICALLY NONLINEAR MINDLIN PLATES 96

7.1 THE CONTRIBUTION OF THE GEOMETRICAL NON-LINEAR FORMULATION TO MAXWELL-BETTI'S THEOREM 104

7.2 THE CONTRIBUTION OF THE GEOMETRICALLY NON-LINEAR TERMS TO THE BEM-EQUATIONS 107

7.3 NUMERICAL EXAMPLES 116

7.3.1 A RECTANGULAR PLATE SIMPLY SUPPORTED ON TWO OPPOSITE SIDES 116

7.3.2 A SQUARE PLATE SIMPLY SUPPORTED ON ALL FOUR SIDES 120

8. CONCLUSION 125
