

**A Constitutive Model
for
Normal and High Strength
Concrete**

Kaare K. B. Dahl

List of contents

Notation	1
1 Introduction	3
2 Experimental program	5
2.1 The scope of the experimental program	5
2.2 Description of the concretes	6
2.3 Strain gauges	9
3 The proposed constitutive model	11
3.1 Characteristics of concrete deformational behavior	11
3.2 Description of the proposed constitutive model	12
3.2.1 The hydrostatic stress-strain curve	13
3.2.2 The non-linearity index	15
3.2.3 The initial deviatoric Young's modulus	16
3.2.4 The secant value of Young's modulus	18
3.2.5 The apparent Poisson's ratio	20
3.3 Summary	25
4 Evaluation of the proposed model	27
4.1 Comparison between the model and triaxial test results ..	27
4.2 Comparison with other triaxial investigations	31
4.2.1 Hobbs [74.1]	31
4.2.2 Ferrara et.al. [76.1]	33
4.2.3 Bellotti and Ronzoni [84.1]	34
4.2.4 Newman and Newman [72.1]	34
4.2.5 Stöckl and Grasser [76.2]	35
4.2.6 van Mier [84.3]	37
4.3 Comparisons with biaxial investigations	41
4.3.1 Kupfer [73.1], normal strength concrete	41
4.3.2 Kupfer [73.1], high strength concrete	43
4.4 Summary of verification	44

5	Concrete versus mortar	47
6	Conclusion	51
	References	53

Appendix 1 **Strain diagrams**

Appendix 2 **Experimental results**
