## Comparison of Box-Jenkins and Bonn Monetary Model Prediction Performance

Fachbereich Mathematik  
Technische Hochschule Darmstadt

Bibliothek

Inv.-Nr. B 18396

Springer-Verlag  
Berlin Heidelberg New York 1980

## CONTENTS

1.	Introduction	1
2.	Bonn econometric model of German economy	9
3.	ARIMA models for fifteen endogenous variables of the BNM model	11
4.	Analysis of sample period lead 1 forecast errors	15
5.	Bates-Granger composite forecast and its application in evaluating econometric model	20
6.	Analysis of post-sample lead 1 forecast errors	25
7.	Causal relationships between selected economic variables	30
7.1	Granger's definition of causality and its characterization	30
7.2	Detection of causality: Pierce's broad tests	36
7.2.1	Testing the independence of two series x and y: $\rho(uv;k) = 0$ for all k	37
7.2.2	Assessment of different types of causality	39
7.2.3	Confirmation of unidirectional causality	41
7.3	Causal relationships between the selected monetary variables of the BNM model	43
7.4	Progressive $\chi^2$ tests for detecting causality	47
7.5	Causal relationships between short-term interest rate, 90-day money rate Frankfurt, and other selected variables	51
	Bibliography	55
	Appendix	63
	Glossary of abbreviations used in BNM model	143
	Index	145
