

# *Understanding Consumption*

ANGUS DEATON

CLARENDON PRESS · OXFORD

# Contents

1: Theoretical Foundations	1
1.1 A simple model of intertemporal choice and the life cycle Many periods and the life cycle; Lifetime consumption profiles	2
1.2 On intertemporal preferences Consumption as an aggregate of commodities; Intertemporal preferences and components of consumption; Intertemporally consistent choices; Time and the structure of preferences; Uncertainty, additivity, and expected utility	6
1.3 Intertemporal choice Risky assets and intertemporal optimality; The evolution of consumption; Consumption evolution with temporal dependence; Consumption, insurance, and complete markets	21
1.4 On the aggregation of individual behavior	37
2: Consumption, Growth, and Interest	44
2.1 Saving and growth The stripped-down life-cycle model; Complications to the basic model; The empirical evidence; Contradictory evidence? Growth and the age profile of consumption; Does consumption track income too closely?	45
2.2 Saving and interest rates Traditional analyses of saving and interest; Interest rates and intertemporal substitution; Representative agents and intertemporal substitution; Intertemporal substitution and aggregation over consumers	59
3: Consumption and Permanent Income	76
Econometric consumption functions; The treatment of expectations	

3.1	A formal version of the permanent income hypothesis Consumption and permanent income; The PIH and the martingale property of consumption; Forming expectations about income	80
3.2	The excess sensitivity of consumption Flavin's tests for excess sensitivity; Excess sensitivity and non-stationary income; Excess sensitivity and the timing of consumption; Excess sensitivity, durability, and habits	87
3.3	Consumption and permanent income: a first summary	101
4:	The Volatility of Consumption	104
4.1	Measured income and permanent income Forecasting non-stationary income; A historical digression; Difference-stationary and trend-stationary income	105
4.2	Is consumption too smooth? A non-parametric estimate of income persistence; Estimating the persistence of labor income; Measuring the persistence of consumption; Excess smoothness: a summary	112
4.3	Superior information, smoothness, and sensitivity Saving, consumption, and income; Superior information; A bivariate model of saving and income; Other insights from the bivariate approach	122
4.4	The volatility of consumption: a summary	133
5:	Macroeconomics and Microeconomics	136
5.1	The permanent income hypothesis and the micro data General problems of data and methodology; Hall and Mish- kin's study; Reinterpretations: measurement error; Reinter- pretations: time-series versus cross-sections	137
5.2	More microeconomic studies of intertemporal choice Further evidence from the PSID; Evidence from the Con- sumer Expenditure Survey; Other tests: the US, Italy, Japan, Norway, and Ivory Coast; A tentative summary	148
5.3	Consumption interactions between households	163

5.4 The reconciliation of micro and macro evidence Aggregation with finite lives; Individual households and aggregate information	167
5.5 Macroeconomics and microeconomics: a summary	175
6: New Directions: Beyond Permanent Income	177
6.1 Precautionary saving An approximation and a special case; Computing consump- tion without certainty equivalence; Complications: autocorre- lation and growth; The evolution of consumption with precautionary saving; Why is precautionary saving impor- tant?	177
6.2 Liquidity constraints Theoretical arguments for credit constraints; Assets as a buffer stock; Serially correlated incomes; Aggregation with liquidity constraints	194
6.3 Precautionary saving versus liquidity constraints	212
7: Understanding Consumption	214
Bibliography	222
