

INDUSTRIAL ENGINEERING AND OPERATIONS RESEARCH

David M. Miller

University of Alabama

J.W. Schmidt

Virginia Polytechnic Institute and State University

With contributions by **R.J. Craig**, *Virginia Polytechnic Institute and State University*; **T.J. Greene**, *Virginia Polytechnic Institute and State University*; and **D.L. Kimbler**, *University of South Florida*

WILEY INTERNATIONAL EDITION

TECHNISCHE HOCHSCHULE DARMSTADT

Fachbereich 1

Gesamtbibliothek

Betriebswirtschaftslehre

Inventar-Nr. : 41.020

Abstell-Nr. : A14/1339

Sammelgebiete: 1.6.9-M

Table of Contents

SECTION ONE INTRODUCTION

Chapter 1 Introduction 2

- 1.1 Industrial Engineering and Operations Research 2
- 1.2 History of Industrial Engineering 3
- 1.3 History of Operations Research 5
- 1.4 Industrial Engineering versus Operations Research 7
- 1.5 Industrial Engineering and Operations Research Activities 9
 - 1.5.1 Basic Activities 9
 - 1.5.2 Classification of Activities 11
 - 1.5.3 IE/OR Tools 12
- 1.6 Overview 12

Chapter 2 Modeling 15

- 2.1 Types of Models 17
 - 2.1.1 Iconic Models 17
 - 2.1.2 Analogue Models 17
 - 2.1.3 Symbolic Models 18
 - Descriptive Mathematical Models* 20
 - Decision Problem Models* 20
- 2.2 Use of Models 25
- 2.3 Formulation of Models 26
- 2.4 Summary 37

**SECTION TWO INDUSTRIAL ENGINEERING
FUNCTIONAL AREAS 43**

Chapter 3 Manufacturing Processes 46

3.1	Introduction	46
3.2	Primary Processes	47
3.2.1	Forming	48
3.2.2	Casting	50
3.2.3	Forging	52
3.3	Secondary Processes	53
3.3.1	Chip Removal	55
	<i>Lathes</i>	55
	<i>Milling Machines</i>	59
	<i>Drill Presses</i>	60
	<i>Other Chip-Removal Machinery</i>	65
3.3.2	Metal Fabricating	69
	<i>Shears</i>	71
	<i>Press Brakes</i>	72
	<i>Punch Presses</i>	72
	<i>Other Metal-Fabricating Machinery</i>	73
3.4	Process Planning	77
3.4.1	Manual Process Planning	77
3.4.2	Automated Process Planning	80
3.5	Computer-Integrated Manufacturing	82
3.5.1	Numerical Control Machinery	83
3.5.2	Robotics	84
3.6	Manufacturing Facilities and Management Organization	87
3.6.1	Manufacturing Facilities	87
3.6.2	Manufacturing Management	89
3.7	Summary	91

Chapter 4 Work Methods and Measurement 94

4.1	Introduction	94
4.2	History of Work Methods and Measurement	95
4.3	Methods Analysis	96
4.3.1	Motion Economy	97
4.3.2	Graphical Tools	98
4.3.3	Improvement Analysis	103
4.4	Evolution of Methods Study	104
4.4.1	Human Factors	104
4.4.2	Automated Systems	105

4.5	Work Measurement	105
4.5.1	Standard Times	107
4.5.2	Calculating Standard Times	107
4.6	Stopwatch Time Study	107
4.6.1	Time Study Calculations	111
4.6.2	Sample Size Required	114
4.6.3	Performance Rating	115
4.7	Work Sampling	118
4.8	Predetermined Time Standards	119
4.9	Other Approaches	123
4.10	Summary	123
Chapter 5	Job Evaluation and Wage Incentives	128
5.1	Job Evaluation	128
5.1.1	Alternative Evaluation Methods	129
5.1.2	Job Ranking	129
5.1.3	Job Classification	130
5.1.4	Point Method	132
5.2	Wage Incentive Systems	136
5.2.1	Payment Schemes	137
	<i>Daywork</i>	138
	<i>Piece Rate</i>	138
	<i>Piece Rate with a Base</i>	139
	<i>Piece Rate with a Shortened Base</i>	140
	<i>Gain Sharing</i>	141
5.2.2	Traditional Individual Wage Incentive Plans	142
5.2.3	Group Incentive Plans	143
5.2.4	Designing a Wage Incentive System	143
	<i>Individual versus Group Plan</i>	143
	<i>Choice of a Payment Scheme</i>	144
	<i>Specification of a Standard</i>	144
5.3	Summary	145
Chapter 6	Engineering Economy	149
6.1	The Nature of Engineering Economy	149
6.2	Cost Concepts	150
6.2.1	Accounting Costs	150
6.2.2	Implicit Costs	151
6.3	Time Value of Money	153
6.3.1	Cash-Flow Profiles and Interest Factors	154
6.3.2	Other Interest Factors	160

x Table of Contents

6.4	Measures of Economic Worth	162
6.4.1	Present Value	162
6.4.2	Annual Cost	162
6.4.3	Rate of Return	163
6.4.4	Other Measures	165
6.5	Comparison of Alternatives	165
6.5.1	Alternatives with Equal Lives	167
6.5.2	Alternatives with Unequal Lives	168
6.5.3	Incremental Analysis versus Ranking	170
6.6	Tax Effects	170
6.6.1	Taxes as a Cost of Doing Business	170
6.7	Summary	172

**SECTION THREE OPERATIONS RESEARCH
METHODOLOGY 175**

Chapter 7 Foundations of Optimization 178

7.1	The Meaning of Optimization	178
7.2	Functions of a Single Unconstrained Continuous Variable	181
7.3	Functions of Several Unconstrained Continuous Variables	192
7.4	Search Techniques	199
7.4.1	One-at-a-Time Search	200
7.5	Summary	206

Chapter 8 Mathematical Programming 212

8.1	Introduction	212
8.2	The Meaning of Mathematical Programming	212
8.3	Applications of Math Programming	214
8.4	Math Programming Models	215
8.4.1	Linear Programming Models	215
8.4.2	Integer Programming Models	219
8.4.3	Nonlinear Programming Models	220
8.4.4	Dynamic Programming Models	221
8.4.5	Deterministic versus Probabilistic Models	221
8.5	Solution of Math Programming Problems	222
8.5.1	Algorithms	222
8.5.2	Designing Algorithms	224
8.6	Linear Programming	224
8.6.1	Graphical Analysis and Solution Properties	225
8.6.2	The Simplex Procedure	229

8.6.3	Steps in the Simplex Procedure	229
8.6.4	Alternative Linear Programming Algorithms	236
8.6.5	Special Linear Programming Models	237
8.7	Analysis Involving Other Math Programming Models	240
8.7.1	Integer Programming	240
8.7.2	Nonlinear Programming	242
8.8	Summary	243

Chapter 9 Queueing Analysis 247

9.1	Introduction	247
9.2	The Waiting-Line System	247
9.2.1	Input Process	248
9.2.2	Waiting-Line Discipline	251
9.2.3	Waiting-Line Characteristics	253
9.2.4	Service Mechanism	254
9.3	Modeling Queueing Systems	257
9.3.1	Measures of Waiting-Line Performance	257
9.3.2	System Parameters and Decision Variables	258
9.3.3	Assumptions	259
9.3.4	Notation	261
9.4	Queueing Models	262
9.4.1	Single-Channel Models	262
	<i>Constant Service Time and Unlimited Waiting-Line Length</i>	262
	<i>Exponential Service Time and Unlimited Waiting-Line Length</i>	265
	<i>Exponential Service Time and Limited Waiting-Line Length</i>	268
9.4.2	Parallel-Channel Model	270
	<i>Exponential Service Time and Unlimited Waiting-Line Length</i>	271
9.5	Summary	273

Chapter 10 System Simulation 278

10.1	The Meaning of Simulation	279
10.2	System Modeling through Simulation	280
10.2.1	Generation of Random Variables	285
10.2.2	Random Numbers	295
10.2.3	Simulation Model Development	296
10.3	Systems Analysis through Simulation	301
10.4	Simulation Languages	304
10.5	Summary	304

SECTION FOUR THE USE OF IE AND OR TOOLS IN TRADITIONAL APPLICATION AREAS 311

Chapter 11 Facility Design 314

11.1	The Meaning of Facility Design	314
11.2	Determining the Number of Machines	315
	11.2.1 Traditional IE Approach	316
	11.2.2 Operations Research Approach	321
11.3	Designing the Layout of a Facility	323
	11.3.1 Basic Approach	327
	11.3.2 Manual Layout Methods	328
	11.3.3 Computerized Layout Methods	334
11.4	Location of Facilities	337
	11.4.1 Classification of Facility-Location Problems	338
	11.4.2 Plant Location	339
	11.4.3 Location Models	340
11.5	Summary	348

Chapter 12 Production Planning and Control 354

12.1	The Meaning of Production Planning and Control	354
12.2	Forecasting-	356
	12.2.1 Forecasting Approaches: Subjective versus Quantitative Methods	357
	12.2.2 Forecasting Approaches: Exogenous Variables versus Time Series	357
	12.2.3 Types of Time-Series Models	358
	12.2.4 Simple Exponential Smoothing	359
12.3	Aggregate Planning	362
	12.3.1 Alternative Solution Approaches	364
	12.3.2 A Linear Programming Approach	364
12.4	Scheduling	369
	12.4.1 Shop-Level Production Scheduling and Control	370
	12.4.2 Scheduling and Control Tools	370
	<i>Gantt Charts</i>	371
	<i>Quantitative Techniques</i>	372
	12.4.3 The n -Jobs, One-Machine Scheduling Problem	373
	12.4.4 The n -Jobs, Two-Machine Scheduling Problem	374
	12.4.5 Scheduling in Dynamic Job Shops	375
	12.4.6 Other Operations Scheduling Problems	376
12.5	Summary	377

Chapter 13 Inventory Control 385

- 13.1 Introduction 385
 - 13.1.1 Operation of an Inventory System 385
 - 13.1.2 The Meaning of Inventory Control 386
- 13.2 Classification of Inventory Situations 387
 - 13.2.1 Costs Considered 388
 - 13.2.2 Inventory Replenishment Process 388
 - 13.2.3 Stochastic Nature of the Inventory Situation 388
 - 13.2.4 Review Policy 388
 - 13.2.5 Item Interdependence 389
- 13.3 Wilson Lot Size Model 389
 - 13.3.1 Graphical Model 390
 - 13.3.2 Math Model 391
 - 13.3.3 Solution 392
- 13.4 Production Lot Size Model 393
 - 13.4.1 Graphical Model 394
 - 13.4.2 Math Model 394
 - 13.4.3 Solution 396
- 13.5 Other Models 397
 - 13.5.1 Wilson Lot Size with Back Orders 397
 - 13.5.2 Production Lot Size with Back Orders 397
- 13.6 Material Requirements Planning 398
- 13.7 Summary 401

Chapter 14 Quality Control 407

- 14.1 Nature of Quality Control 407
- 14.2 Statistical Basis for Quality Control 409
- 14.3 Process Control 412
- 14.4 Acceptance Sampling 424
- 14.5 Summary 430

SECTION FIVE TYING IT ALL TOGETHER THROUGH PRODUCTIVITY 435**Chapter 15 Productivity 436**

- 15.1 The Meaning of Productivity 436
 - 15.1.1 Components of Productivity Management 437
 - 15.1.2 Productivity Programs 437
 - 15.1.3 Productivity and IE/OR 438

xiv Table of Contents

15.2	Productivity Measurement	438
15.2.1	Partial Measures	439
15.2.2	Use and Interpretation of Partial Measures	440
15.2.3	Total Factor Measures	442
15.3	Productivity Improvement	448
15.3.1	Traditional IE Productivity Improvement Tools	449
15.3.2	Operations Research Productivity Improvement Tools	450
15.3.3	Quality Circles	451
15.4	Summary	453

Index	457
