GENERAL REMARKS AND NOTATION ix

PART I

WORLD ECONOMIC MODEL

List of variables and coefficients 3

Chapter 1. INTRODUCTION 7
1.1. Broad approach to the world economic model 7
1.2. Main purpose of the World Economic Model 9
1.3. Supply-driven vs. demand-driven approaches 12
1.4. The treatment of prices 12

Chapter 2. CAPITAL STOCK 13
2.1. Estimates of capital stock 13
2.2. Capital stock functions 13

Chapter 3. DEPRECIATION 18
3.1. Perpetual inventory method of depreciation 18
3.2. General formulae for capital stock and depreciation under PI method 20
3.3. Straightline method of depreciation 23
3.4. General formulae for capital stock and depreciation under the straightline method 23
3.4a. Comparison with the PI method 23
3.5. The replacement method of depreciation 25
3.6. General formulae for capital stock and depreciation under the replacement method of depreciation 27
3.7. Comparison with perpetual inventory method 27
3.8. Explanation of average lifetime of capital 29
3.9. Effect of changes in average lifetime on capital stock estimates 30

Chapter 4. PRODUCTION 32
4.1. Cobb-Douglas production function 32
4.2. The role of intermediate goods in the production function 33

4.3. Elasticity of scale in C-D production function 35
4.4. Scale effect as a form of technical progress in C-D function 37
4.5. Linear homogeneous Cobb-Douglas production function 37
4.6. Advantage of treating scale effect as technical progress 38
4.7. Cobb-Douglas production function on per worker basis 38
4.8. Technical progress 38
4.9. Capital-output ratios and the Cobb-Douglas production function 41
4.10. Shortcomings of the Cobb-Douglas production function 42
4.11. Cobb-Douglas production function with changing factor income shares 45
4.12. The CES production function 45
4.13. Production function based on gross investment 47
4.14. Depreciation/gross investment ratio 48
4.15. Fixed coefficient production function 53
4.16. Capital-output ratios for about 75 individual countries 54
4.17. Drawbacks of the fixed coefficient production function 54
4.18. Additive form of the fixed coefficient production function 54
4.19. Verdoorn function 59

Chapter 5. INVESTMENT 63
5.1. Some theoretical aspects 63
5.2. Investment function 65
5.3. International migration of labour and investment 66
5.4. Depreciation allowance and investment finance 67
5.5. Age-distribution of population and investment 68
5.6. Spread of banking and gross investment 71
5.7. Investment ratio in relation to per capita income 71
5.8. Cross-country and overtime analysis of investment behaviour 72
5.9. Investment and income shares 72
5.10. International financial flows and investment 73
5.11. Need for a simplified investment function in a global model 74
5.12. Investment function in a demand-driven model 75
5.13. Investment function for a demand-driven economy 75

Chapter 6. WORLD GDP AND REGIONAL SHARES 77
6.1. World GDP 77
6.2. Regional shares in world GDP 77
6.3. Absolute income disparities among regions 77
6.4. Factors of disparity among regions 77

Chapter 7. SECTORAL DISTRIBUTION OF GDP 78
7.1. Main postulates about changes in sectoral pattern of production 78
7.2. Sectoral demand and production constraints 78
7.3. Sectoral growth function 84

Chapter 8. GROSS OUTPUT, INTERSECTORAL FLOWS AND FINAL DEMAND 86
8.1. Macro-accounting relations 86
8.2. The input-output coefficients 91
8.3. Procedure for updating and projecting input coefficients 91
8.4. Work at Bradford University on input-output tables 96
8.5. Guidelines for practical use of the input-coefficient matrix 97
8.6. Some important changes in the input coefficients 98
a. Inputs into the agricultural sector 98
b. Inputs into the mining sector 99
c. Inputs into the machinery and equipment sector 100
d. Manufactures other than machinery and equipment 100
e. Construction 101
f. Services 101
8.7. Correction procedure for the input coefficient matrix followed in the present model 102

Chapter 9. INTERNATIONAL TRADE 103
9.1. Import requirements 103
9.2. Import requirements function 103
9.3. Export capacities 106
9.4. Global export capacity and import requirement equations 108
9.5. Bilateral trade flows 108
9.6. Algorithm for determining bilateral trade flows 109
9.7. Equations for bilateral import and export shares 111
9.8. Equations for global imports and exports 111
9.9. Equality for world exports and imports 111
9.10. Regional export and import shares 112
9.11. All-product trade and trade shares 112
9.12. Trade balances 113

Chapter 10. ALTERNATIVE APPROACHES TO INTERNATIONAL TRADE ANALYSIS 114
10.1. The share approach 114
10.2. The constrained share approach 115
10.3. Modified trend in bilateral trade shares 116
10.4. The RAS method for projecting trade shares 117
10.5. The probability approach 118
10.6. The allocative approach 120
10.7. Foreign trade as endogenous part of the input-output system 123
10.8. Probability approach as endogenous part of the input-output system 126

Chapter 11. INVESTMENT BY ORIGIN 129
11.1. Clarification of the concept 129
11.2. Investment by origin function 130
11.3. An alternative investment by origin function 131
11.4. Dynamic input-output analysis 132

11.5. Dynamic inverse 135

Chapter 12. CONSUMPTION AND SAVINGS 138
12.1. Consumption at the economy level 138
12.2. Savings 138
12.3. Equality between savings gap and trade gap 138
12.4. Availability of sectoral product groups for consumption 139
12.5. Consumption function 140
12.6. Linear and non-linear expenditure system 141
12.7. Possible inconsistency between sectoral consumption demand and sectoral availability for consumption 143
12.8. Procedure for reconciliation 144
12.9. The problem of consumption data 146

Chapter 13. INTERNATIONAL FINANCIAL FLOWS 151
13.1. Concepts and definitions 151
13.2. Net resource transfers equation 152
13.3. Investment income receipts (payments) equation 152
13.4. Gross resource transfers equation 153
13.5. Stock of resource transfers equation 153
13.6. Problem of data on international flows 153

Chapter 14. SIMULATION TECHNIQUES 158
14.1. Definitions 158
14.2. General approach to the simulation work 158
14.3. An illustration of simulations 162

APPENDIX-I. RAS AND ASSOCIATED METHOD FOR UP-DATING/ PROJECTING THE INPUT-OUTPUT TABLE 167

PART II

WORLD MODEL OF POPULATION AND LABOUR FORCE

List of variables and coefficients 177

Chapter 1. VARIOUS APPROACHES TO POPULATION PROJECTIONS 181
1.1. The trend method 181
Exponential curve 181
Logistic curve 182
Modified exponential curve 183
Gompertz curve 183
1.2. The component method 185
1.3. Cohort-component method 186
Crude birth rate components 186
Extended crude birth rate components 188

Chapter 2. FERTILITY 191
2.1. Total fertility rate 191
2.2. Total fertility rate definition 191
2.3. Total marital fertility definition 192
2.4. Determinants of total fertility rate 192
2.5. Effect of income on total fertility rate 196
2.6. Total fertility rate-per capita income function 197
2.7. Effect of birth control programmes on total fertility rate 198
Total fertility rate-birth control function
2.9. Combined total fertility rate function 199
2.10. Nuptiality and total fertility rate 199
2.11. Age-specific birth rates 200
2.12. Age-specific birth rate function 202
2.13. More elaborate treatment of fertility 203
2.14. Projection of births 204

Chapter 3. MORTALITY 205
3.1. Crude death rate components 205
3.2. Extended components of crude death rate 206
3.3. Expectation of life at birth 207
3.4. Expectation of life at birth function 208
3.5. Mortality due to acute nutrition deficiency 209
3.6. Acute nutrition deficiency death function 210
3.7. Modified expectation of life at birth function 211
3.8. Age-specific mortality rates 211
3.9. Projections of deaths 212

Chapter 4. PROJECTIONS OF POPULATION 213
4.1. Accounting identity for population 213
4.2. Accounting identities for age-groups 0 and 1 214
4.3. Accounting identity for the oldest age-group 214
4.4. Crude birth and death rates again 215
4.5. Total population projections based on crude birth and death rates 217
Crude birth rate function 217
Crude death rate function 220
Total population equation 221

Chapter 5. LABOUR FORCE 222
5.1. Statistics of economically active population 222
5.2. Crude activity rates 222
Components of crude activity rate 223
5.3. Differences in age-sex-specific activity rates 224
5.4. Factors affecting activity rates among the young 224
5.5. Factors affecting activity rates among the old 227
5.6. Factors affecting female activity rates in the central age groups 228
5.7. Factors affecting male activity rates in the central age groups 230
5.8. Main conclusions about trends in activity rates 230
5.9. Activity rate functions 234
5.10. ILO's methodology for projecting activity rates 235

5.11. Total labour force projections 238
Equation for labour force by sex and age 238
Equation for labour force in the economy as a whole 238
5.12. Sectoral labour force projections 239
Equation for labour productivity in total economy 239
Equation for labour productivity in individual sectors 239
Equation for labour force by sectors 239

APPENDIX-I: LIFE TABLE 241
APPENDIX-II: SEX-AGE-ADJUSTED BIRTH RATE 244
APPENDIX-III: ACTIVITY RATES BY AGE GROUPS OF POPULATION IN SELECTED REGIONS OF THE WORLD 246
APPENDIX-IV: PERCENTAGE DISTRIBUTION OF POPULATION BY BROAD AGE-GROUPS FOR THE NEXT TWO DECADES FOR VARIOUS REGIONS OF THE WORLD 248
APPENDIX-V: CRUDE BIRTH RATES AND CRUDE DEATH RATES, 1950-1975, BY REGIONS 249

PART III

WORLD ENERGY MODEL

List of variables and coefficients 253

Chapter 1. LINKAGES BETWEEN THE WORLD ENERGY MODEL AND THE WORLD ECONOMIC MODEL 257
1.1. General remarks 257
1.2. Energy sector in the macro-economic framework 257
1.3. An input-output framework of the world energy model in physical terms 259
1.4. Conversion of different energy products into a common unit 259
1.5. Bridges between sectoral and macro-economic analysis 261
1.6. Available energy statistics in relation to the input-output framework 263
1.7. Conversion factors 268
1.8. Efficiencies of production and delivery 268

Chapter 2. DEMAND ANALYSIS 273
2.1. Energy economy drive as the outstanding feature of the 1970s in developed areas 273
2.2. Reasons for poor progress in energy conservation in developing areas 275
2.3. Scope for future economies in consumption 277
2.4. Inter-fuel substitutions 278
2.5. Quantitative analysis of demand 279
2.6. Demand functions 283
2.7. Use of price ratios in demand analysis 286
2.8. End-use demand analysis 286

CHAPTER 3. INTERNATIONAL TRADE 289
3.1. Factors influencing exports and imports of energy products 289
3.2. Exports and imports of total energy 289
3.3. Fuel-mix of imports and exports 290
3.4. International consistency of fuel-specific exports and imports 291

CHAPTER 4. INTER-ENERGY FLOWS 294
4.1. Total final demand 294
4.2. Inter-energy coefficient matrix 294
4.3. Intermediate energy deliveries 296
4.4. A simplification 296
4.5. Changes in inter-energy coefficient matrix 298
4.6. Waste utilization 299
4.7. Total requirements of domestic energy 300

CHAPTER 5. RESERVES AND RESOURCES 301
5.1. General remarks 301
5.2. Statistics of reserves and resources 302
5.3. Projections of reserves 302

CHAPTER 6. PRODUCTION CAPACITY 309
6.1. Primary forms of energy 309
6.2. Derived forms of energy 311
6.3. Total energy 312

CHAPTER 7. PRICES 313
7.1. General considerations 313
7.2. Prices of non-oil energy products 314
7.3. Prices of oil 316
7.4. Feedback effect of energy prices on the general price level 318
7.5. Algebraic formulation of the feedback effect 321

REFERENCES 324

PART IV

WORLD AGRICULTURAL MODEL

List of variables and coefficients 327

CHAPTER 1. LINKAGE BETWEEN THE WORLD AGRICULTURAL MODEL AND THE WORLD ECONOMIC MODEL 331
1.1. Data in value units vs. physical units 331
1.2. Wheat equivalent tons (twe) 331
1.3. Data in kilocalories or tons of proteins 332
1.4. Agricultural sector in the macro-economic framework 333
1.5. Links with the input-output framework of a world agricultural model 333
1.6. Links with a World Agricultural Model based on data in physical units (kilocalories or tons of proteins) 336
1.7. An importan drawback of the data in physical units 340

CHAPTER 2. DEMAND ANALYSIS 342
2.1. Components of demand 342
2.2. Bottom-up vs. top-down approaches 343
2.3. Demand for food products 344
2.4. Description of Engel curves 344
2.5. Tornqvist functions 346
2.6. A general demand function for food products 347
2.7. Effect of urbanization, income distribution and household size 350
2.8. Demand for agricultural raw materials 351
2.9. Consistency with the World Economic Model 354
2.10. Demand for feedingstuffs - inter-agriculture flows 355

CHAPTER 3. INTERNATIONAL TRADE 361
3.1. Factors influencing exports and imports of agricultural products 361
3.2. Estimates of total agricultural exports and imports in the World Economic Model 362
3.3. Product-mix of agricultural exports and imports 362
3.4. International consistency of exports and imports of individual product groups 364
3.5. The bottom-up approach to international trade 366

CHAPTER 4. PRODUCTION ANALYSIS 367
4.1. An aggregate agricultural production function 367
4.2. Relative importance of different factors of production 370
4.3. Output-investment relationship 371
4.4. Priorities in agricultural planning 373
4.5. A variant of the production function 375
4.6. Use of the aggregated production function for projections 375
4.7. Product-mix of output 376

CHAPTER 5. EXTENDED PRODUCTION ANALYSIS 378
5.1. Production of plantation crops 378
5.2. Production capacity of fish 383
5.3. Production capacity of animal feeds 385
5.4. Production capacity of livestock products 387
5.5. Agricultural production, size of holdings and land tenure 391

CHAPTER 6. PRICES AND PRODUCT BALANCES 392
6.1. Demand-supply balance 392
6.2. Price function 394
6.3. Equilibrium vs. stable disequilibrium 395

CHAPTER 7. AGRICULTURE: TOWARDS 2000 397
