List of Contributors	ix
Introduction	xi
1 Wholesale and Retail Prices: Bivariate Time-Series Modeling with Forecastable Error Variances	
C. W. J. Granger, R. P. Robins, and Robert F. Engle	1
1.1 Introduction	1
1.2 The Sources of Variance	2
1.3 Initial Explorations	6
1.4 Maximum Likelihood Estimation	9
1.5 Maximum Likelihood Estimated Models	11
1.6 Conclusion	16
References	16
2 Recursive Stability Analysis: The Demand for Money during the German Hyperinflation	
Jean-Marie Dufour	18
2.1 Introduction	18
2.2 Model	19
2.3 Methodology	22
2.4 Recursive Stability Analysis of Money Demand	28
2.5 Conclusion	51
2.6 Appendix: Data	56
Notes	56
References	58
3 A Bayesian Analysis of the Determinants of Inflation	
Edward E. Leamer	62
3.1 Introduction	62
3.2 A General Model of Inflation	65
3.3 Estimation Results	76
3.4 Concluding Remarks	87
Notes	88
References	88

4	The Use of Outside Information in Econometric Forecasting	
	Mark N. Greene, E. Philip Howrey, and Saul H. Hymans	90
4.1	Introduction	90
4.2	The Use of Outside Information	90
4.3	Some Empirical Results	97
4.4	Conclusion	114
	Notes	115
	References	116
5	Centering, the Constant, First-Differencing, and Assessing Conditioning	
	David A. Belsley	117
5.1	Round 1: An Opening Example of Centering	117
5.2	Assessing the Conditioning of Which Regression?	124
5.3	Round 2: The Basic Regression and Its Conditioning	126
5.4	The Constant	132
5.5	General Centering	137
5.6	First-Differencing	142
5.7	Appendix A: Centering and Conditioning	146
5.8	Appendix B: $\kappa(X)$ as an Appropriate Lower Bound for the Conditioning of the First-Difference Estimates with Respect to the Basic Data X	149
	Notes	151
	References	152
6	Applications of Bounded-Influence and Diagnostic Methods in Energy Modeling	
	Stephen Swartz and Roy E. Welsch	154
6.1	Introduction	154
6.2	The Model	156
6.3	OLS Estimates	162
6.4	Alternative Estimation Procedures	169
	Notes	189
	References	190

7	A Comparison of the Michigan and Fair Models: Further Results	
	Ray C. Fair and Lewis S. Alexander	191
7.1	Introduction	191
7.2	The Method	191
7.3	Some Features of the Models	193
7.4	The Equations Analyzed	195
7.5	Calculations of the Results	198
7.6	Discussion of the Results	208
	Notes	211
	References	211
8	Linear Analysis of Large Nonlinear Models and Model Simplification	
	Edwin Kuh, John Neese, and Peter Hollinger	213
8.1	Model and Theory Background	213
8.2	Empirical Results of Parameter Perturbations	220
8.3	A Compressed Model	231
8.4	Summary	235
	Notes	237
	References	238
	Index	239
