Contents

1	Introduction	1
	<i>Appendix 1.1 Suggested further reading</i>	7
	<i>Appendix 1.2 Introducing the finite element method—crossing bridges in understanding</i>	8
2	PJFRAME: Pin-jointed plane frames	14
2.0	Introduction	14
2.1	Example of truss	15
2.1.1	Application of equilibrium	15
2.1.2	Conditions for geometric compatibility	18
2.1.3	Stress/strain or force/elongation relations	20
2.1.4	Boundary conditions and solution	21
2.2	The pin-jointed element	24
2.2.1	Direction cosines	26
2.2.2	Procedure in applying stiffness method to a pin-jointed structure	27
2.2.3	Solution of truss in Fig 2.10 using the stiffness method	27
2.2.4	Load vector $\{P\}$	33
2.2.5	Nodal forces and reactions	34
2.3	Implementation in program	36
2.3.1	Description of program	36
2.3.2	Data preparation	43
2.3.3	Program PJFRAME	44
2.3.4	Example of truss analysis using PJFRAME	54
	<i>Appendix 2.1 PJFRAME: Program summary and data sheet</i>	57
3	PLFRAME: Rigid/pin-jointed plane frames	60
3.0	Introduction	60
3.1	Development of equations	60
3.1.1	Stiffness matrix about member axis	60
3.1.2	Application of equations (3.12) to a simple orthogonal structure	63
3.1.3	Transforming the member stiffness matrix $[K]$ from local to global coordinates	66
3.1.4	Example	72
3.1.5	Dealing with different end conditions	78
3.1.6	Dealing with member loads	80
3.2	Implementation in program	84
3.2.1	Description of program	84
3.2.2	Data preparation	85
3.2.3	Program PLFRAME	86
3.2.4	Example of plane frame analysis using PLFRAME	95
	<i>Appendix 3.1 PLFRAME: Program summary and data sheet</i>	99
	<i>Appendix 3.2 Alternative approach to finding the stiffness matrix</i>	103
4	FEPCST: Plane stress/plane strain finite element analysis using constant strain triangles	106
4.0	Introduction	106
4.1	Development of equations	107

4.1.1 The stiffness coefficients for a general triangular plane stress/plane strain element	107
4.2 Illustrative example	115
4.2.1 Using element stiffness matrices	115
4.2.2 Using potential energy applied to the whole structure	124
4.3 Implementation in program	126
4.3.1 Description of program	126
4.3.2 Data preparation	128
4.3.3 Program FEPCST	129
4.3.4 Example of solution to continuum problem using FEPCST	137
Appendix 4.1 FEPCST: Program summary and data sheet	143
5 FEPB: Bending of thin flat plates	145
5.0 Introduction	145
5.1 Development of equations	146
5.1.1 Finite element method – rectangular element	146
5.1.2 Determination of triple product	151
5.1.3 Assemblage and solution	152
5.2 Implementation in program	155
5.2.1 Description of program	155
5.2.2 Data preparation	157
5.2.3 Program FEPB	158
5.2.4 Example of solution to thin rectangular plate problem using FEPB	170
Appendix 5.1 FEPB: Program summary and data sheet	174
6 FEPLST: Plane stress/strain finite element analyses using linear strain triangles	178
6.0 Introduction	178
6.1 Generalized coordinate displacement models	179
6.2 Interpolation displacement models	180
6.2.1 Triangular coordinate system	181
6.2.2 Examples of interpolation displacement models	182
6.3 Interpolation models for a triangle	183
6.3.1 Linear interpolation function	183
6.3.2 Quadratic interpolation function	184
6.4 Elements with curved sides	186
6.5 Developing the stiffness matrix	188
6.5.1 Determining stresses and strains	189
6.5.1.1 Linear model	189
6.5.1.2 Quadratic model	190
6.5.2 Deriving the stiffness matrix	191
6.5.3 Constant strain triangle (CST) – linear displacement model	195
6.5.4 Linear strain triangle (LST) – quadratic displacement model	196
6.6 Summary of procedure to determine [K] for the straight-sided LST	199
6.7 Load vector {P} for CST and LST	200
6.8 Implementation in program	202
6.8.1 Description of program	202
6.8.2 Data preparation	204
6.8.3 Program FEPLST	205
6.8.4 Example of solution of continuum problem using FEPLST	214
Appendix 6.1 FEPLST: Program summary and data sheet	218
7 The linear isoparametric quadrilateral element	220
7.0 Introduction	220
7.1 The interpolation displacement model	221
7.1.1 Rectangular coordinate system	221
7.1.2 Linear interpolation function	222
7.2 Determination of strains	222
7.2.1 Establishing the derivatives $\partial N/\partial s$ and $\partial N/\partial t$	223

7.2.2 Establishing the derivatives $\partial s/\partial x$ and $\partial s/\partial y$ etc.	223
7.3 Determination of stresses	226
7.4 Determination of the stiffness matrix	226
7.4.1 Establishing the general form of $[K]$	226
7.4.2 Numerical integration	227
7.4.3 Formation of the triple product $[B]^T[D][B]$	229
7.5 Load vector $\{P\}$	230
8 The quadratic isoparametric quadrilateral	231
8.0 Introduction	231
8.1 Quadratic interpolation model	232
8.2 Determination of strains	233
8.3 Determination of stresses	235
8.4 Determination of stiffness matrix	236
8.5 Load vector $\{P\}$	236
8.6 Example of single element check on stiffness matrix	237
9 Further developments of programs	241
9.0 Introduction	241
9.1 Possible developments	241
9.1.1 Units	241
9.1.2 Increasing the number of elements and nodes	242
9.1.3 Data through INPUT statements	242
9.1.4 Plotting of grids	243
9.1.5 Multiple load cases	243
9.1.6 Efficient storage	244
9.1.7 The use of disc storage	244
Appendix A Matrix algebra	246
A.1 Matrix properties and manipulations	246
A.2 Structural stiffness matrices	251
Appendix B Basic: ours and yours (by D.A. Pirie)	254
B.1 Why BASIC?	254
B.1.1 Portable BASIC	255
B.1.2 Formatting of results	255
B.2 Our BASIC	255
B.2.1 Data types	256
B.2.2 Program elements – constants, variables, expressions	256
B.2.3 Line numbering, types of program statement	257
B.3 Use of formatting subroutines	260
B.4 Your BASIC	261
Appendix C Energy method of structural analysis	262
C.1 Introduction	262
C.2 Application to beam problems	262
C.2.1 Principle of virtual work	262
C.2.1.1 Example of use of virtual work equation	263
C.2.2 Dual energy theorems – complementary and potential	264
C.2.2.1 Example of use of energy methods for beams	265
C.3 Application to continuum problems	267
C.3.1 Statement of virtual work equation	267
C.3.2 Statement of potential energy functional	267
C.4 Note on bounding energy solution	268
C.4.1 Statement of potential energy functional for pin-jointed frames	268
C.4.2 Example of use of potential energy for trusses	268
Index	271
