Preface	xix

CHAPTERS

Introduction

1. The methods used in psychological research	1
---	---

Choice of topic, measures and research design

2. The preliminary stages of research	19
3. Variables and the validity of research designs	35
4. Designs and their internal validity	47

Methods

5. Asking questions I: Interviews and surveys	73
6. Asking questions II: Measuring attitudes and meaning	89
7. Observation and content analysis	101

Data and analysis

8. Scales of measurement	109
9. Summarising and describing data	117
10. Going beyond description	151
11. Samples and populations	163
12. Analysis of differences between a single sample and a population	175
13. Effect size and power	193
14. Parametric and non-parametric tests	203
15. Differences between two levels of an independent variable	213
16. Preliminary analysis of designs with one independent variable with more than two levels	237
17. Analysis of designs with more than one independent variable	261
18. Subsequent Analysis after ANOVA or χ^2	281
19. Analysis of relationships I: Correlation	307
20. Analysis of relationships II: Regression	341

21. Multivariate analysis	363
22. Meta-analysis	377
Sharing the results	
23. Reporting research	387
APPENDIXES	
I. Descriptive statistics linked to Chapter Nine	407
II. Sampling and confidence intervals for proportions linked to Chapter Eleven	419
III. Comparing a sample with a population linked to Chapter Twelve	425
IV. The power of a one-group z-test linked to Chapter Thirteen	431
V. Data transformations and goodness-of-fit tests linked to Chapter Fourteen	435
VI. Seeking differences between two levels of an independent variable linked to Chapter Fifteen	443
VII. Seeking differences between more than two levels of an independent variable linked to Chapter Sixteen	461
VIII. Analysis of designs with more than one independent variable linked to Chapter Seventeen	483
IX. Subsequent analysis after an ANOVA or χ^2 linked to Chapter Eighteen	499
X. Correlation and reliability linked to Chapter Nineteen	519
XI. Regression linked to Chapter Twenty	537
XII. Item analysis and discriminative analysis of Likert scales linked to Chapter Six	547
XIII. Meta-analysis linked to Chapter Twenty-two	549
XIV. Probability tables	563
XV. Power tables	599
XVI. Miscellaneous tables	635
References	647
Author index	651
Subject index	653
Glossary of symbols	666

Detailed contents of chapters

CHAPTER ONE: The methods used in psychological research

Introduction	1
What is the purpose of research?	1
What is a method?	1
Why have a method?	2
Tensions between control and ecological validity	2
Distinctions between quantitative and qualitative methods	3
Is psychology a science?	11
Ethical issues in psychological research	12
Summary	17

CHAPTER TWO: The preliminary stages of research

Introduction	19
Choice of topic	19
Focusing on a specific area of research	23
Choice of method	24
Choice of hypotheses	25
Choice of research design	25
Measurement in psychology	25
The choice of measures	26
Choice of analysis	31
Choice of participants - the sample	31
The procedure	32
Pilot studies	33
Summary	34

CHAPTER THREE: Variables and the validity of research designs

Introduction	35
Variables	35
The validity of research designs	38
The choice of hypotheses	45
Summary	46

CHAPTER FOUR: Research designs and their internal validity

Introduction	47
Types of designs	47
Terminology	49
Specific examples of research designs	55
Summary	70

CHAPTER FIVE: Asking questions I: Interviews and surveys

Introduction	73
Topics for questions	73
The formats for asking questions	74
Choosing between the formats	74
The settings for asking questions	75
The pilot study	86
Summary	86

CHAPTER SIX: Asking questions II: Measuring attitudes and meaning

Introduction	89
Reliability of measures	89
Dimensions	90
Attitude scales	91
Techniques to measure meaning	97
Summary	100

CHAPTER SEVEN: Observation and content analysis

Introduction	101
Observation	101
Issues shared between observation and content analysis	105
Structured observation	107
Content analysis	108
Summary	108

CHAPTER EIGHT: Scales of measurement

Introduction	109
Examples of measures	109
Scales of measurement	110
The relevance of the four scales	112
Indicators	114
Statisticians and scales	114
Summary	116

CHAPTER NINE: Summarising and describing data

Introduction	117
Numerical methods	117
Graphical methods	125
The distribution of data	142
Summary	148

CHAPTER TEN: Going beyond description

Introduction	151
Hypothesis testing	151
Probability	152
Statistical significance	156
Error types	157
Calculating the probability of the outcome of research	158
One- and two-tailed tests	159
Summary	161

CHAPTER ELEVEN: Samples and populations

Introduction	163
Statistics	163
Parameters	163
Choosing a sample	164
Confidence intervals	169
Summary	173

CHAPTER TWELVE: Analysis of differences between a single sample and a population

Introduction	175
z-tests	175
One-group t-tests	183
Confidence intervals for means	187
Further graphical displays	188
Identifying outliers with standardised scores	191
Summary	192

CHAPTER THIRTEEN: Effect size and power

Introduction	193
Limitations of statistical significance testing	193
Effect size	194
Statistical power	195
Summary	201

CHAPTER FOURTEEN: Parametric and non-parametric tests

Introduction	203
Parametric tests	203
The assumptions of parametric tests	203
Non-parametric tests for one-group designs	206
Summary	212

CHAPTER FIFTEEN: Analysis of differences between two levels of an independent variable

Introduction	213
Parametric tests	213
Non-parametric tests	223
Summary	236

CHAPTER SIXTEEN: Preliminary analysis of designs with one IV with more than two levels

Introduction	237
Parametric tests	237
Non-parametric equivalents of ANOVA	255
Summary	259

CHAPTER SEVENTEEN: Analysis of designs with more than one independent variable

Introduction	261
Interactions between independent variables	261
Parametric tests	263
Non-parametric tests	279
Summary	279

CHAPTER EIGHTEEN: Subsequent analysis after ANOVA or χ^2

Introduction	281
Contrasts	281
Trend tests	293
Simple effects	297
Summary	306

CHAPTER NINETEEN: Analysis of relationships I: Correlation

Introduction	307
Correlation	307
Non-parametric correlation	321
Correlation and nominal data	325
Other uses of correlation	328
The use of correlation to evaluate reliability and validity of measures	336
Summary	339

CHAPTER TWENTY: Analysis of relationships II: Regression

Introduction	341
Simple regression	341
Multiple regression	346
The similarity between ANOVA and multiple regression	358
Summary	361

CHAPTER TWENTY-ONE: Multivariate analysis

Introduction	363
Why use multivariate techniques?	364
Seeking a difference	364
Exploring relationships	368
Summary	374

CHAPTER TWENTY-TWO: Meta-analysis

Introduction	377
Choosing the topic of the meta-analysis	377
Identifying the research	378
Choosing the hypotheses to be tested	378
Extracting the necessary information	379
Combining the results of studies	381
Focused comparison	384
Reporting the results of a meta-analysis	384
Summary	385

CHAPTER TWENTY-THREE: Reporting research

Introduction	387
Non-sexist language	387
A written report	388
A verbal presentation	398
A poster presentation	404
Trying the presentation out	405
Summary	405
