----------------------------	----

## GENERAL PART

Preliminaries . . . . .	3
Genesis of the book . . . . .	3
Plan of the book . . . . .	5
Requirements for reading and directions to the reader . . . . .	7

### *Chapter 1 Studies in savings – past and present*

1.1. Theory versus empirical research . . . . .	9
1.2. Progress in operationally significant savings theory . . . . .	11
1.3. Regress in empirically applied savings theory . . . . .	15
1.3.1. Clearing the ground . . . . .	15
1.3.2. Cross-section analysis . . . . .	17
1.3.3. Time-series analysis . . . . .	20

## THEORETICAL PART

### *Chapter 2 A general micro-theory of optimal allocation of consumption and savings over time*

2.1. Alternative approaches to savings theory . . . . .	27
2.1.1. Savings as resource allocation 'sui generis'? . . . . .	27
2.1.2. Single-stage or multi-stage allocation of consumer expenditures and savings . . . . .	29
2.2. Theoretical framework of multi-stage resource allocation . . . . .	30
2.3. Optimum allocation of savings over time: a theme with variations . . . . .	31
2.4. Basic model . . . . .	39
2.4.1. Utility function and lifetime budget equation . . . . .	39

2.4.2.	Optimum conditions . . . . .	41
2.4.3.	Effects of varying the 'data' on the optimal time-pattern of consumption . . . . .	45
2.4.4.	Invariance of the results against arbitrary monotonically increasing transformation of the utility function . . . . .	50
2.5.	Model with desired final personal wealth incorporated in the utility function . . . . .	52
2.5.1.	Utility function . . . . .	52
2.5.2.	Optimum conditions . . . . .	53
2.5.3.	Effects of varying the 'data' on the optimal time-pattern of consumption . . . . .	54
2.6.	Model with working hours incorporated in the utility function . . . . .	59
2.6.1.	Utility function and income-generating functions . . . . .	59
2.6.2.	Optimum conditions . . . . .	60
2.6.3.	Effects of varying the 'data' on the optimal time-patterns of consumption and of working hours . . . . .	61
2.7.	Model with survival rates incorporated in the lifetime budget equation . . . . .	64
2.8.	Model with varying prospective rates of interest, consumer price levels and asset price levels . . . . .	65
2.8.1.	Utility function and lifetime budget equation . . . . .	65
2.8.1.1.	Exogenous prospective rates of interest and price levels . . . . .	65
2.8.1.2.	Endogenous prospective rates of interest and constant prospective price levels . . . . .	67
2.8.2.	Optimum conditions . . . . .	68
2.8.2.1.	Exogenous prospective rates of interest and price levels . . . . .	68
2.8.2.2.	Endogenous prospective rates of interest and constant prospective price levels . . . . .	69
2.8.3.	Effects of varying the 'data' on the optimal time-pattern of consumption . . . . .	70
2.8.3.1.	Exogenous prospective rates of interest and price levels . . . . .	70
2.8.3.2.	Endogenous prospective rates of interest and constant prospective price levels . . . . .	72
2.9.	Basic model incorporating uncertainty . . . . .	73
2.9.1.	Budget equation and utility function . . . . .	73
2.9.2.	Optimum conditions . . . . .	74
2.9.3.	Effects of varying the 'data' on the optimal time-pattern of consumption . . . . .	76
2.9.4.	Alternatives . . . . .	78
2.10.	Sociometric version of the model with survival rates incorporated . . . . .	82
2.10.1.	Utility function and budget equation . . . . .	82
2.10.2.	Optimum conditions . . . . .	83
2.10.3.	Effects of varying the 'data' on the optimal time-pattern of consumption . . . . .	87
Appendix A to chapter 2:		
	Single-stage intertemporal allocation of financial resources to consumer budget items, residual determination of savings and evaluation of demand . . . . .	93

*Chapter 3 Micro-theory of optimal allocation of consumption and savings over time based on an additive-separable utility function*

3.1. Basic model . . . . .	98
3.1.1. Completely separable utility function (CAS) . . . . .	98
3.1.2. Pairwise separable utility function (PAS) . . . . .	101
3.2. Model with desired final personal wealth incorporated in the utility function	107
3.2.1. Completely separable utility function (CAS) . . . . .	107
3.2.2. Pairwise separable utility function (PAS) . . . . .	109
3.3. Model with working hours incorporated in the utility function . . . . .	111
3.3.1. Linear income-generating functions . . . . .	111
3.3.2. Completely separable utility function (CAS) . . . . .	111
3.3.3. Pairwise separable utility function (PAS) . . . . .	116
3.4. Model with varying prospective rates of interest and price levels . . . . .	119
3.5. Model incorporating uncertainty . . . . .	121
3.5.1. Joint probability distribution of prospective incomes . . . . .	121
3.5.2. Completely separable utility function (CAS) . . . . .	121
3.6. Sociometric version of the model . . . . .	127
3.6.1. Constant 'conjunctural variations' . . . . .	127
3.6.2. Completely separable utility function (CAS) . . . . .	127
3.7. Continuous versions of the basic model . . . . .	131
3.7.1. Utility function and budget equation . . . . .	131
3.7.2. Optimum conditions . . . . .	133
3.7.3. Effects of varying the 'data' on the optimal time-pattern of consumption . . . . .	134
3.7.3.1. Changes in personal wealth, time-patterns of income and the rate of interest . . . . .	134
3.7.3.2. Changes in life-expectancy and in the time-pattern of survival rates . . . . .	138
3.7.4. Dynamic extension . . . . .	140
3.8. Recapitulation . . . . .	142
3.8.1. General . . . . .	142
3.8.2. Optimum conditions . . . . .	142
3.8.3. Income effects . . . . .	144
3.8.3.1. Income effects on consumption . . . . .	144
3.8.3.2. Income effects on other arguments of the utility function . . . . .	145
3.8.4. Effects of interest rates . . . . .	146
3.8.4.1. General . . . . .	146
3.8.4.2. Effects of changing a uniform rate of interest . . . . .	146
3.8.4.3. Effects of single-period changes in variable rates of interest . . . . .	147
3.8.5. Change-in-personal-wealth effects . . . . .	148
3.8.6. Effects of survival rates and of life expectancy . . . . .	149

Appendix A to chapter 3:

Derivation of Euler conditions for integral constrained utility maxima and of effects formulae . . . . .	150
--	-----

## *Chapter 4 A micro-savings model based on an addi-log utility function*

4.1.	Derivation of the model . . . . .	154
4.1.1.	Assumptions . . . . .	154
4.1.2.	Specification . . . . .	155
4.1.3.	Optimization and outcome . . . . .	157
4.2.	Interpretation of the model . . . . .	160
4.2.1.	General properties and framework of the model . . . . .	160
4.2.2.	Signs and levels of consumption and savings . . . . .	160
4.2.3.	Effects of changes in income . . . . .	163
4.2.4.	Effects of changes in personal wealth . . . . .	167
4.2.5.	Effects of changes in the rate of interest . . . . .	168
4.3.	Modifications of the model . . . . .	169
4.3.1.	Synopsis . . . . .	169
4.3.2.	Consumption minima . . . . .	170
4.3.3.	Survival rates instead of life expectancy . . . . .	171
4.3.4.	Model with varying rates of interest . . . . .	172
4.3.5.	Continuous version . . . . .	175
4.3.6.	Operational significance of the modifications . . . . .	176
4.4.	Lifetime pattern of personal wealth implied by the micro-savings model . . . . .	177
Appendix A to chapter 4:		
	Effects of debt restriction on optimal lifetime consumption and personal wealth patterns . . . . .	181

## *Chapter 5 Macro-savings theory*

5.1.	Derivation of a macro-savings function . . . . .	183
5.1.1.	Preliminaries . . . . .	183
5.1.2.	First-stage aggregation . . . . .	184
5.1.3.	Second-stage aggregation . . . . .	186
5.2.	Properties of the macro-savings function . . . . .	190
5.2.1.	General conclusions . . . . .	190
5.2.2.	Dimensions, signs and orders of magnitude of the parameters . . . . .	190
5.2.3.	Signs and orders of magnitude of the variables and their contributions to savings . . . . .	192
5.2.4.	Effects of the explanatory variables on aggregate savings . . . . .	193
5.3.	A growth model of aggregate personal wealth . . . . .	195
5.4.	Interim appraisal of the macro-savings function . . . . .	202

## EMPIRICAL PART

*Chapter 6 Application of the micro-savings function to survey data*

6.1.	Empirical basis: the 1960 savings survey of the Netherlands . . . . .	207
6.1.1.	Scope and size of the sample . . . . .	207
6.1.2.	Reference units . . . . .	208
6.1.3.	Further delimitation of the reference group . . . . .	209
6.1.4.	Contents of the survey questionnaire and its use in the savings analysis . . . . .	211
6.2.	Quantification of the variables in the micro-savings function . . . . .	214
6.2.1.	Current income, savings and consumption . . . . .	214
6.2.2.	Expected time-pattern of future income . . . . .	216
6.2.2.1.	Labour income . . . . .	216
6.2.2.2.	Capital income . . . . .	219
6.2.3.	Initial personal wealth . . . . .	219
6.2.4.	Intended final personal wealth . . . . .	220
6.2.5.	Survival rates and life expectancies . . . . .	221
6.2.6.	Prospective rates of interest . . . . .	221
6.2.7.	Prospective consumer and asset price levels . . . . .	224
6.2.8.	Summing-up: total resources . . . . .	224
6.3.	The 'urgency to consume' and its main determinants . . . . .	225
6.3.1.	Quantification of the 'urgency to consume' . . . . .	225
6.3.2.	Main determinants of the 'urgency to consume' . . . . .	226
6.3.2.1.	Life expectancy . . . . .	226
6.3.2.2.	Age . . . . .	226
6.3.2.3.	Other characteristics . . . . .	226
6.4.	Model for inter-individual differences in 'urgency to consume' . . . . .	229
6.4.1.	Variable to be explained ( $\alpha_1 L$ ) . . . . .	229
6.4.2.	Explanatory variables . . . . .	229
6.4.3.	The model . . . . .	231
6.5.	Estimation and testing . . . . .	233
6.5.1.	Estimating effects . . . . .	233
6.5.2.	Testing effects . . . . .	240
6.5.3.	Testing intra-family (dis-) similarities in savings behaviour . . . . .	242
6.6.	Results . . . . .	245
6.6.0.	Tabulation . . . . .	245
6.6.0.1.	Basic tables . . . . .	245
6.6.0.1.1.	Classification . . . . .	245
6.6.0.1.2.	Contents . . . . .	246
6.6.0.2.	Effects' tables . . . . .	247
6.6.0.2.1.	Classification . . . . .	247
6.6.0.2.2.	Pairing of characteristics for estimating effects . . . . .	256
6.6.0.2.3.	Contents . . . . .	257
6.6.1.	Cell frequencies . . . . .	257

6.6.2.	Means . . . . .	258
6.6.2.1.	Means of $\alpha_{1t}L_t$ . . . . .	258
6.6.2.2.	Means of $\alpha_{1t}$ . . . . .	260
6.6.3.	Dispersions . . . . .	261
6.6.3.1.	Dispersions of $\alpha_{1t}L_t$ . . . . .	261
6.6.3.2.	Dispersions of $\alpha_{1t}$ . . . . .	264
6.6.4.	Main effects . . . . .	264
6.6.4.1.	General observations . . . . .	264
6.6.4.2.	Sex . . . . .	265
6.6.4.3.	Age . . . . .	265
6.6.4.4.	Marital status . . . . .	268
6.6.4.5.	Household size and composition . . . . .	268
6.6.4.6.	Occupational status . . . . .	271
6.6.4.7.	Extraordinary expenses . . . . .	272
6.6.4.8.	Participation in a bonus savings plan and ownership of a dwelling . . . . .	272
6.6.5.	Overall performance of the three-way classification . . . . .	272
6.6.6.	Intra-family (dis-) similarities in savings behaviour . . . . .	276
Appendices to chapter 6:		
6A.	Graphical smoothing of income data from age-class to age-year distributions . . . . .	278
6B.	Consequences of terminating or changing economic activity for the prospective time-pattern of income . . . . .	295
6C.	Income capitalization factors, age patterns of typical income, and their dependence on occupation, age and sex . . . . .	299
6D.	Difference between the 'life expectancy' and the 'survival rate' methods of calculating 'financial resources' and 'urgency to consume' . . . . .	318
6E.	Elimination of the intercept from least squares parameter estimation . . . . .	323
 <i>Chapter 7 A macro-savings function for the Netherlands, 1949-1966</i>		
7.1.	Coverage . . . . .	325
7.1.1.	Reference period . . . . .	325
7.1.2.	Units of time . . . . .	325
7.1.3.	Sector(s) . . . . .	326
7.2.	Variables . . . . .	326
7.2.1.	Mutual consistency . . . . .	326
7.2.2.	Savings . . . . .	326
7.2.3.	Income . . . . .	327
7.2.4.	Wealth . . . . .	327
7.2.5.	Rate of interest . . . . .	329
7.3.	Estimation methods . . . . .	329
7.3.1.	Ordinary least squares (OLS) and specification of the regression equation . . . . .	329
7.3.2.	Generalized least squares (GLS) . . . . .	332
7.3.2.1.	Transformation . . . . .	332
7.3.2.2.	Estimation of the coefficient(s) of autocorrelation . . . . .	334

7.3.3.	Joint estimation of the coefficients of regression and of autocorrelation . . . . .	336
7.3.4.	A simultaneous equations approach? . . . . .	337
7.4.	Empirical results . . . . .	338
7.4.1.	Synopsis . . . . .	338
7.4.2.	Comparisons between various specifications of the savings functions . . . . .	339
7.4.3.	Comparison between personal savings and national savings . . . . .	345
7.4.4.	Comparison between estimation methods . . . . .	345
7.4.5.	A graphical representation of the 'best' equation . . . . .	348
7.4.6.	Approximation of the parameters of the macro-savings function by means of results of the cross-section analysis . . . . .	350
7.4.7.	Implications for income and wealth effects . . . . .	355
7.4.8.	Main conclusions . . . . .	358

#### Appendices to chapter 7:

7A.	Basic data underlying the savings model for the Netherlands, 1949-1966 . . . . .	359
7B.	Invariance of the determinant of a moment matrix of basic variables and their products against shifting of the former ones, with the latter ones becoming products of the transformed basic variables . . . . .	360

### *Chapter 8 Effects of biological and demographic factors on savings in the Netherlands and in Mexico*

8.1.	Effects of extending life expectancy on individual savings in the Netherlands . . . . .	362
8.2.	Effects of variations in the composition of the population on aggregate savings rates . . . . .	366
8.3.	Summary and concluding remarks . . . . .	372

### *Chapter 9 Retrospect and prospect*

9.1.	How much rationality underlies the savings models? . . . . .	373
9.1.1.	In defense of rationality . . . . .	373
9.1.2.	Allowance for non-rationality . . . . .	375
9.1.3.	Impact of non-economic factors on savings and consumption . . . . .	377
9.2.	Comparisons between savings models . . . . .	378
9.2.1.	Micro-models . . . . .	378
9.2.1.1.	Decision units . . . . .	378
9.2.1.2.	Contents . . . . .	379
9.2.1.2.1.	Savings . . . . .	379
9.2.1.2.2.	Income . . . . .	380
9.2.1.2.3.	Personal wealth . . . . .	380
9.2.1.2.4.	Rate of interest . . . . .	381
9.2.1.2.5.	Personal characteristics . . . . .	381
9.2.1.3.	Form of the savings functions . . . . .	382
9.2.1.4.	Methods of quantifying the savings functions . . . . .	383

9.2.1.5.	Signs and magnitudes of effects . . . . .	384
9.2.1.5.1.	Income . . . . .	384
9.2.1.5.2.	Personal wealth. . . . .	388
9.2.1.5.3.	Rate of interest . . . . .	389
9.2.1.5.4.	Personal characteristics . . . . .	390
9.2.2.	Macro-models . . . . .	392
9.2.2.1.	<i>Relationships and differences between macro- and micro-models in</i> <i>general</i> . . . . .	392
9.2.2.2.	Contents. . . . .	392
9.2.2.2.1.	Savings (and consumption) . . . . .	393
9.2.2.2.2.	Income . . . . .	393
9.2.2.2.3.	Personal wealth. . . . .	393
9.2.2.2.4.	Rate of interest . . . . .	395
9.2.2.2.5.	Other variables . . . . .	396
9.2.2.3.	Form of the relationships . . . . .	397
9.2.2.4.	Estimation methods . . . . .	398
9.2.2.5.	Results . . . . .	399
9.2.2.5.1.	Income . . . . .	399
9.2.2.5.2.	Personal wealth. . . . .	399
9.2.2.5.3.	Rate of interest . . . . .	399
9.3.	Research prospects . . . . .	400
9.3.1.	Bridging theory and empirical research . . . . .	400
9.3.2.	Extension and elaboration of savings theory . . . . .	400
9.3.2.1.	Micro-theory . . . . .	400
9.3.2.2.	Macro-theory . . . . .	403
9.3.3.	Application . . . . .	404
9.3.3.1.	General . . . . .	404
9.3.3.2.	Cross-section analysis . . . . .	405
9.3.3.3.	Time-series analysis . . . . .	408
