## DETERMINISTIC MODELS IN HYDROLOGY

	<u>Contents</u>	<u>Page</u>
1	INTRODUCTION	
1.1	Purpose	1
1.2	Background to Mathematical Models	1
1.3	What are Deterministic Models?	4
1.4	The role of Deterministic Models in Water Resources Assessment	5
2	REVIEW OF TYPES OF DETERMINISTIC MODEL USED IN HYDROLOGY	8
2.1	Definition of terms	8
2.2	Some available models	10
3	DATA REQUIREMENTS	17
3.1	Data collection	17
	(a) Hydrometeorological data series	17
	(b) Physical parameters	19
3.2	Data checking	21
3.3	Data augmentation and generation	22
	(a) Data augmentation	22
	(b) Data generation	23
4	HARDWARE AND SOFTWARE REQUIREMENTS FOR DETERMINISTIC MODELS	25
4.1	Introduction	25
4.2	Hardware	25
4.3	Software	26
	4.3.1 Digital programming languages	26
	4.3.2 Scientific and business languages	27
	4.3.3 Continuous and discrete simulation languages	28
	(a) Continuous system simulation languages	30
	(b) Discrete-event simulation languages	30
	(c) Combined discrete-continuous simulation languages	31
	4.3.4 Special purpose languages	32
5	APPLICATION OF DETERMINISTIC MODELS	35
5.1	Steps in applying a model	35
	5.1.1 Define the problem	35
	5.1.2 Analysis of data requirements	36
	5.1.3 Review and selection of suitable model	36
	5.1.4 Assembling the data base and estimating model parameters	37
	5.1.5 Calibrating and debugging the model	37
	5.1.6 Verifying simulation accuracy	38
	5.1.7 Formulating production runs, running the model and analysing the results	39

	<u>Page</u>
5.2 Water yield assessment	40
5.2.1 Theoretical development	40
5.2.2 Available models	42
5.2.3 Example of water yield assessment using the Stabford Watershed Model	44
5.2.3.1 Description of model	44
5.2.3.2 Computer storage and calculation time	46
5.2.3.3 Card deck preparation and programme organisation	46
5.3 Land use assessment	47
5.3.1 Available models	48
5.3.2 HSP application to vegetation management	48
5.3.2.1 Computer storage and calculation time	51
5.3.2.2 Card deck preparation	51
5.3.2.3 Production runs	51
5.3.3 Kinematic flow routing to assess the effect of changing channle grometry	57
5.3.3.1 Theoretical development	57
5.3.3.2 Model application	59
5.3.4 The Strathclyde Sediment Erosion Model applied to assessing the effect of land use	60
5.3.4.1 Theory	61
5.3.4.2 Review od previous models	62
5.3.4.3 Description of the Strathclyde Sediment Erosion Model	63
5.3.4.4 Hardware requirements of combined watershed/ model	63
5.3.4.5 Results of model runs	64
5.3.4.6 Limitation of present model	64
5.4 Groundwater assessment	64
5.4.1 Introduction	64
5.4.2 The "safe yield" concept	67
5.4.3 Theoretical background	68
5.4.4 Models in groundwater hydrology	71
5.4.5 Groundwater model classification	73
5.4.6 Other types of model classification	75
5.4.7 Conclusion	75
