

METHODS IN GEOCHEMISTRY AND GEOPHYSICS, 31

THE GEOELECTRICAL METHODS IN GEOPHYSICAL EXPLORATION

MICHAEL S. ZHDANOV

*Department of Geology and Geophysics, University of Utah, Salt Lake City,
UT 84112, U.S.A.*

Member, Russian Academy of Natural Sciences, Moscow, Russia

and

GEORGE V. KELLER

*Department of Geophysics, Colorado School of Mines, Golden,
CO 80401, U.S.A.*

ELSEVIER

Amsterdam – London – New York – Tokyo 1994

TABLE OF CONTENTS

Chapter 1. ELECTRICAL METHODS IN GEOPHYSICS	1
1.1 In the Beginning	1
1.2 The Mind Set	8
1.3 And the Future	15
Chapter 2. GENERAL CONCEPTS OF ELECTROMAGNETIC FIELD BEHAVIOR	29
2.1 Maxwell's Equations	29
2.2 Diffusing Electromagnetic Fields	40
2.3 Static Electromagnetic Fields	46
2.4 Quasi-stationary Electromagnetic Fields	59
Chapter 3. PROPERTIES OF ROCKS AND MINERALS	79
3.1 Properties and Units	79
3.2 Properties in a Parametric Sense	84
3.3 Properties in an Existential Sense	113
3.4 Geoelectrical Mesostructures and Megastructures	125
3.5 Electrical Properties of the Atmosphere and the Ocean	128
Chapter 4. ELECTROMAGNETIC ENVIRONMENT OF PLANET EARTH	137
4.1 Earth Currents of External Origin	138
4.2 Industrial Noise	146
4.3 Atmospheric Electric Sources	147
4.4 Mechanically Generated Electric Fields	150
4.5 Extraneous Sources of Electric Fields	152
4.6 Electromagnetic Fields Generated by the Oceans	161
Chapter 5. DIRECT CURRENT AND INDUCED POLARIZATION METHODS	165
5.1 Point and Dipole Sources on a Uniform Earth	166
5.2 Electric Fields in One-Dimensional Earth Structures	176
5.3 Fields of a Point Source for Two- and Three-Dimensional Structures	199
5.4 Vertical Electric Sounding and Apparent Resistivity	220
5.5 Induced Polarization	244
5.6 Magnetic Field Measurements	253
Chapter 6. NATURAL-FIELD ELECTROMAGNETIC METHODS	261
6.1 The Tikhonov-Cagniard Approach	261
6.2 Linearity of Relationships between Components of the Magneto- telluric Field	282
6.3 Electromagnetic Fields in a Horizontally Homogeneous Medium	289

6.4	Electromagnetic Fields in Horizontally Inhomogeneous Media	300
6.5	Magnetotelluric and Magnetovariational Survey Methods	305
6.6	Data Reduction	309
6.7	Interpretation of MT Data	325
6.8	Interpretation of MVP and GDS Data	337
Chapter 7.	CONTROLLED SOURCE ELECTROMAGNETIC METHODS	347
7.1	Principles of Controlled Source Electromagnetic Methods	347
7.2	Electromagnetic Sounding	383
7.3	Electromagnetic Profiling	411
Chapter 8.	MODELING AND SIMULATION	451
8.1	Exact Analytical Solutions for Special Cases	451
8.2	Thin Sheet Models	465
8.3	The Integral Equation Method	474
8.4	Finite Difference Modeling	478
8.5	Finite Element Method	484
8.6	Physical and Analog Modeling	488
8.7	Other Approaches to Modeling	496
Chapter 9.	INSENSITIVITY AND AMBIGUITY	507
9.1	Insensitivity for a Laterally Uniform Earth	508
9.2	Ambiguity for a Laterally Uniform Earth	526
Chapter 10.	PRACTICAL ASPECTS OF DATA ACQUISITION	535
10.1	Sources	535
10.2	Detection of Electric and Magnetic Fields	547
10.3	Sampling	563
10.4	Filtering	566
10.5	Survey Design	576
Chapter 11.	INTERPRETATION	585
11.1	Rules, Intuition and Pragmatic Interpretation	587
11.2	Pseudo-Inversion of Soundings by Transformation	604
11.3	Inversion	610
11.4	Continuation of Electromagnetic Fields	628
11.5	Electromagnetic Migration	641
11.6	Comprehensive Three Dimensional Interpretation	654
Chapter 12.	OTHER PLATFORMS, OTHER METHODOLOGIES	675
12.1	Airborne Electromagnetic (AEM) Methods	675
12.2	Marine Electrical Surveys	692
12.3	Bore Hole Assisted Methods	701
12.4	Spontaneous Polarization (SP) Method	707

12.5 Ground Penetrating Radar (GPR)	710
12.6 The Piezoelectric Method (PEP)	720
Chapter 13. A BAKER'S DOZEN OF CASE HISTORIES	727
13.1 Minerals Exploration - Que River Deposit, Tasmania, Australia	727
13.2 Physical Volcanology - Oshima Volcano, Japan	733
13.3 Groundwater Exploration - Apodi Valley, Rio Grande do Norte, Brazil	740
13.4 Groundwater Exploration - The Netherlands	745
13.5 Environmental Engineering - Permafrost	752
13.6 Environmental Engineering - Tracking Lost Hydrocarbons	759
13.7 Petroleum Exploration - The San Juan Sag	763
13.8 Petroleum Exploration - Nep Botuobin Anticline	770
13.9 Petroleum Exploration - The Grant Canyon Structure, Central Nevada	775
13.10 Geothermal Exploration - Central Volcanic Zone, North Island, New Zealand	779
13.11 Geothermal Exploration - Imperial Valley of Southern California	785
13.12 Crustal Studies - EMSLAB - Juan de Fuca Project	792
13.13 Crustal Studies - Khibini	802
Chapter 14. THE FOREST OR THE TREES?	813
Appendix A: MATHEMATICAL CONVENTIONS	817
Definitions of variables	817
Definitions of fields and units	818
Linear operators and their matrices	819
Spectral description of ambient electromagnetic fields	821
Singular value decomposition	823
Appendix B. FORTRAN Codes	825
Schlumberger sounding on a one-dimensional earth	825
Magnetotelluric sounding of a one-dimensional medium	828
Time domain electromagnetic sounding on a one dimensional earth	830
One-dimensional inversion of Schlumberger sounding data	833
Random walk inversion of time-domain electromagnetic soundings	850
Programs GEOM.FOR, DRIVE.FOR and MAP.FOR	857
Index	869
