Foreword	<i>xi</i>
Preface	<i>xiii</i>

I

MANAGEMENT AND SYSTEMS

1

The Meaning and Role of MIS for Managing	3
---	----------

The Manager of Tomorrow. What this Book Is All About. The Approach of this Book. The Systems View of Business. Advances in Management. The Management Information System. Example of an MIS. The Process of MIS Development. MIS Organization within the Company. Summary.

2

The Management/Organization System

35

Development of Modern Organization Theory. Modern Organization Theory: A Systems View. School of Management Analysis: Components of a System of Organization and Management. Summary: A System of Organization and Management. Management—Air, Science, or Profession? Summary.

Case Study: The Midwest Stationery Company 62

3

Modern Organization: Behavioral Aspects

65

Organization Systems. Relationship of Organization Theory to Managing. Whom Does the Organization Serve? Behavior and Motivation. The Informal Organization as a Social System. Leadership for Managers. Application of Modern Organization Concepts to the Design and Operation of MIS. Summary.

4

Management, Information, and the Systems Approach

105

Planning. Summary.

5

What the Manager Should Know about the Computer

145

Data Processing and the Computer. Operation of a Manual Information System. Components of a Computer System. Conversion of Manual to Computer-Based Systems. The Data-Bank Concept. Types of Computer-Based Applications. Summary.

Case Study: E-Systems, Inc. (A) 192

6

Information Systems for Decision-Making

195

Evolution of an Information System. Basic Information Systems. Decision-Making and MIS. MIS as a Technique for Making Programmed Decisions. Decision-Assisting Information Systems. Summary.

Case Study: E-Systems, Inc. (B) 239

II

PLANNING, DESIGN, AND IMPLEMENTATION OF MIS

7

Planning and Programming Management Information Systems

245

The Need for Systems Planning. Objectives of Management Information Systems Planning. Project Planning and MIS. Needs Research. Setting Project Objectives. Project Proposal. Planning Techniques. Reporting and Controlling. Summary.

8

MIS Design: Gross Design Concepts

271

Define the Problems. Set System Objectives. Determine Information Needs. Determine Information Sources. Develop Alternative Gross Designs and Select One. Document the System Concept. Prepare the Gross Design Report. Summary.

Case Study: E-Systems, Inc. (C) 300

9

Detailed Systems Design

305

Inform the Organization of the Purpose and Nature of the Systems Design Effort. Aim of Detailed Design. Project Management of MIS Detailed Design. Identify Dominant and Principal Trade-off Performance Criteria for the System. Define the Subsystems. Sketch the Detailed Operating Subsystems and Information Flows. Determine the Degree of Automation of Each Operation. Develop the Data Base. Model the System Quantitatively. Develop the Software. Establish the Information Output Formats for Management. Test the System by Simulation. Propose an Organization to Operate the System. Document the Detailed Design. Summary.

10

Implementation of the New MIS

337

Plan the Implementation. Acquire Floor Space and Plan Space Layouts. Organize for Implementation. Develop Procedures for Implementation.

Train the Operating Personnel. Develop the Software; Acquire the Hardware. Develop Forms for Data Collection and Information Dissemination. Develop the Files. Test the System. Cutover. Document the System. Evaluate the MIS. Control and Maintain the System. Summary.
Case Study: The Artcraft Company 363

Appendix II: Systems Design Techniques 367

Data Gathering. Decision Tables. Flowcharting. Data Base Development and Management. Documentation. Simulation.

III

CONCEPTS FOR DECISION-MAKING WITH MIS

11

Systems Concepts for Management Information Systems 397

The Fundamental Building Blocks of Management Systems. Systems Classifications. Some System Concepts. Need for a General Systems Theory. Information Feedback Systems. The Business Organization as a System. System Classifications for MIS Design. Summary.

12

Data, Information, and Communication 437

Meaning of Information and Data. The Data Life Cycle. Characteristics of Information. Measurement of "Amount" of Information. Information, Management, and the Computer. Information Search, Storage, and Retrieval. Communication. Summary.

13

Problem-Solving and Decision-Making 467

Problems, Management, and Systems. The Nature of Problems. Formulation of the Problem. The Problem-Solving Process. The Decision Process. Anatomy of Choosing. Summary.

14

Management Science and Systems Modeling

497

What Is Management Science? What Are Models? Kinds of Models. Use of Models for Analysis of Systems Characteristics. Simulation. Construction of Models. Summary.

Case Study: An Information Problem 530

IV

THE FUTURE OF MIS

15

Management Information Systems: The Future

535

The Future: An Overview. Future Trends in Management Information Systems. The Need for Managerial Involvement in Systems Design.

V

MAJOR CASES

Case 1 Community Hospital, Inc. 557

Case 2 Development of an MIS for Field
Office Managers of the Northwestern Insurance Company 571

Case 3 Ralston Purina Company 581

Case 4 Benson & Benson, Inc. 601

Case 5 Quantum Engineering Associates, Inc. 614

Case 6 International Medical Instruments, Inc. 631

Index

663
