## Composite Structures of Steel and Concrete

Volume 2. Bridges, with a Commentary on BS 5400 : Part 5

R. P. JOHNSON, MA, MICE, FStructE

Professor of Civil Engineering, University of Warwick

and

R.J. BUCKBY, MSc, MICE, MIMunE

Former Constrado Research Fellow, University of Warwick

## Contents

Foreword		v
Preface		vii
Notation		xvii
Plates		<i>Between pages 204 and 205</i>
<b>Chapter 6. Conception and Global Analysis of the Superstructure</b>		
6.1	Introduction	1
6.2	Conception and Design	3
6.2.1	The deck slab	
6.2.2	Load distribution, and the provision of cross-members	
6.2.3	The prevention or control of cracking at internal supports	
6.2.4	The effects of creep and shrinkage	
6.2.5	Methods of construction	
6.3	Examples of Existing Types of Composite Bridge Deck	34
6.3.1	Simply supported rolled steel I-beams	
6.3.2	Plate girders	
6.3.3	Box girders	
6.3.4	Tied arches	
6.3.5	Suspension bridges	
6.4	Global Analysis	43
6.4.1	Scope of analytical methods	
6.4.2	Orthotropic plate methods	
6.4.3	Grillage analysis	
6.4.4	Finite element analysis	
6.4.5	Finite strip analysis	
<b>Chapter 7. Design Philosophy, Materials, and Loading</b>		
7.1	Limit-State Design Philosophy for Bridges	60
7.1.1	Partial safety factors for loads and load effects	
7.1.2	The gap factor	
7.1.3	The limit states	

7.2	Properties of Materials and Shear Connectors	69
7.2.1	Static strength of shear connectors	
7.2.2	Use of friction-grip bolts as shear connectors	
7.2.3	Use of steel chequer-plate flanges for shear connection	
7.2.4	Partial safety factors for materials, $\gamma_m$	
7.3	Loading	90
7.3.1	Dead load	
7.3.2	Highway loading	
7.3.3	Wind loading	
7.3.4	Effects of temperature	
7.3.5	Effects of shrinkage of concrete	
7.4	Global Safety Factors	105
<b>Chapter 8. Design of Superstructure for Beam-and-Slab Bridges</b>		
8.1	Introduction	107
8.2	Distribution of Bending Moment and Vertical Shear	113
8.2.1	Serviceability limit state	
8.2.2	Ultimate limit state	
8.3	Reinforced Concrete Deck Slabs	122
8.3.1	Analysis of deck slab for local effects of wheel loads	
8.3.2	Analysis of cross-sections of deck slabs	
8.3.3	Control of cracking	
8.4	Design of Cross-Sections for Longitudinal Moments and Vertical Shear	137
8.4.1	Effective breadth of concrete flange	
8.4.2	Serviceability limit state	
8.4.3	Ultimate limit state	
8.5	Design of Shear Connection for Static Loads	154
8.5.1	Longitudinal shear at the serviceability limit state	
8.5.2	Detailing of the shear connection	
8.5.3	Longitudinal shear at the ultimate limit state	
8.6	Design for Temperature and Shrinkage	172
8.6.1	Primary effects in simply supported and continuous members	
8.6.2	Secondary effects in continuous members	
8.7	Deflection and Vibration of Composite Bridge Decks	180
8.7.1	Deflection	
8.7.2	Vibration	

<b>Chapter 9. Box Girders and Composite Plates</b>		
9.1	Introduction	189
9.2	Design of Box Girders for Longitudinal Moments, Torsion, and Vertical Shear	190
9.2.1	Analysis of the structure	
9.2.2	Analysis of cross-sections	
9.3	Longitudinal Shear	195
9.3.1	Design of shear connection in closed-top box girders	
9.4	Composite Plates	202
9.4.1	Research on composite plates	
9.4.2	Design of composite plates in bridge decks	
9.4.3	Loss of interaction in short-span composite members	
9.4.4	Design for the ultimate limit state	
9.5	Intersections of Box Girders with Cross-Girders	226
<b>Chapter 10. Fatigue</b>		
10.1	Introduction	229
10.2	Loading for Fatigue Assessment of Highway Bridges	229
10.3	Application of Design Loading	232
10.4	Design of Shear Connection for Fatigue	233
10.4.1	Direct calculation of connector spacing	
10.4.2	Fatigue assessment without calculation of cumulative damage	
10.4.3	Fatigue assessment with calculation of cumulative damage	
10.5	Local Effects of Repeated Loading	241
10.5.1	Shear connectors in box girders	
<b>Chapter 11. Permanent Formwork in Bridge Decks</b>		
11.1	Introduction	245
11.2	Loading	247
11.3	Non-participating permanent formwork	249
11.4	Structurally participating permanent formwork	250
11.4.1	Profiled metal decking	
11.4.2	Precast concrete formwork in composite slabs	
<b>Chapter 12. Cased Beams and Filler Beam Construction</b>		
12.1	Scope	262

12.2	Distribution of bending moments and vertical shear forces	263
12.2.1	Global analysis of filler-beam decks	
12.3	Analysis of cross-sections for longitudinal bending and shear	268
12.4	Longitudinal shear in cased beams	268
12.5	Effects of temperature and shrinkage in cased beams	274
12.6	Control of cracking	275
<b>Chapter 13. Prestressing of Composite Beams</b>		
13.1	Introduction	278
13.2	Methods of prestressing	279
13.3	The Preflex beam	284
<b>Chapter 14. Composite Columns</b>		
14.1	Introduction	294
14.2	Scope of the ultimate strength design method in Part 5 of the Bridge Code	295
14.3	Pin-ended columns	295
14.3.1	Properties of the cross-section	
14.3.2	Axially loaded columns	
14.3.3	Columns with end moments	
14.3.4	Biaxial interaction	
14.3.5	Triaxial containment in concrete-filled circular hollow sections	
14.3.6	Long-term loading	
14.3.7	Comparisons between design methods for pin-ended composite columns	
14.4	Elastically restrained columns	322
14.4.1	Requirements of a design method for restrained composite columns	
14.4.2	Semi-empirical method for the design of restrained composite columns	
14.4.3	Justification of the semi-empirical design method	
<b>Chapter 15. Construction</b>		
15.1	Effect of method of construction on the design of composite beams	338
15.2	Site testing of shear connector welds	344

<b>Appendix C. Control of Cracking by Limiting the Spacing of Reinforcing Bars</b>	<b>348</b>
<b>Appendix D. Stresses due to Temperature and Shrinkage</b>	<b>352</b>
<b>Appendix E. Fatigue Strength of Shear Connectors</b>	<b>360</b>
<b>Appendix F. A Modified Perry Formula to Represent the European Curves for Steel Struts</b>	<b>366</b>
<b>Appendix G. Ultimate Moment of Resistance of a Concrete Filled Steel Circular Hollow Section</b>	<b>369</b>
<b>Appendix H. Formulae for the Elastic Analysis of a Beam with one Change of Cross-Section</b>	<b>373</b>
<b>WORKED EXAMPLES</b>	
<b>Appendix W. Simply Supported Beam-and-Slab Deck</b>	<b>376</b>
<b>Appendix X. Two-Span Continuous Beam-and-Slab Deck</b>	<b>423</b>
<b>Appendix Y. Box-Girder Footbridge with Precast Deck Slabs</b>	<b>455</b>
<b>Appendix Z. Design of a Restrained Composite Column</b>	<b>484</b>
