Contents

Preface	vii
--------------------------	-----

Chapter 1

FOUNDATIONS

1.1. Introduction	1
1.2. Computational complexity	2
1.3. Primitive data structures	7
1.4. Algorithmic notation	12
1.5. Trees and graphs	14

Chapter 2

DISJOINT SETS

2.1. Disjoint sets and compressed trees	23
2.2. An amortized upper bound for path compression	24
♦2.3. Remarks	29

Chapter 3

HEAPS

3.1. Heaps and heap-ordered trees	33
3.2. d -heaps	34
3.3. Leftist heaps	38
3.4. Remarks	42

Chapter 4

SEARCH TREES

4.1. Sorted sets and binary search trees	45
4.2. Balanced binary trees	48
4.3. Self-adjusting binary trees	53

Chapter 5

LINKING AND CUTTING TREES

5.1. The problem of linking and cutting trees	59
5.2. Representing trees as sets of paths	60
5.3. Representing paths as binary trees	64
5.4. Remarks	70

Chapter 6**MINIMUM SPANNING TREES**

6.1. The greedy method	71
6.2. Three classical algorithms	72
6.3. The round robin algorithm	77
6.4. Remarks	81

Chapter 7**SHORTEST PATHS**

7.1. Shortest-path trees and labeling and scanning	85
7.2. Efficient scanning orders	89
7.3. All pairs	94

Chapter 8**NETWORK FLOWS**

8.1. Flows, cuts, and augmenting paths	97
8.2. Augmenting by blocking flows	102
8.3. Finding blocking flows	104
8.4. Minimum cost flows	108

Chapter 9**MATCHINGS**

9.1. Bipartite matchings and network flows	113
9.2. Alternating paths	114
9.3. Blossoms	115
9.4. Algorithms for nonbipartite matching	119
