<i>Preface to third edition</i>	xi
<b>Chapter 1 Properties of Fluids</b>	<b>1</b>
1.1 Introduction	1
1.2 Engineering units	1
1.3 Mass density and specific weight	1
1.4 Relative density	2
1.5 Viscosity of fluids	2
1.6 Compressibility and elasticity of fluids	2
1.7 Vapour pressure of liquids	3
1.8 Surface tension and capillarity	3
Worked examples	3
Recommended reading	5
Problems	5
<b>Chapter 2 Fluid Statics</b>	<b>7</b>
2.1 Introduction	7
2.2 Pascal's law	7
2.3 Pressure variation with depth in a static incompressible fluid	7
2.4 Pressure measurement	9
2.5 Hydrostatic thrust on plane surfaces	11
2.6 Pressure diagrams	14
2.7 Hydrostatic thrust on curved surfaces	15
2.8 Hydrostatic buoyant thrust	17
2.9 Stability of floating bodies	18
2.10 Determination of metacentre	19
2.11 Periodic time of rolling (or oscillation) of a floating body	21
2.12 Liquid ballast and the effective metacentric height	21
2.13 Relative equilibrium	22
Worked examples	24
Recommended reading	42
Problems	42
<b>Chapter 3 Fluid Flow Concepts and Measurements</b>	<b>47</b>
3.1 Kinematics of fluids	47
3.2 Steady and unsteady flows	48

3.3	Uniform and non-uniform flows	48
3.4	Rotational and irrotational flows	49
3.5	One, two and three dimensional flows	49
3.6	Streamtube and continuity equation	49
3.7	Accelerations of fluid particles	50
3.8	Two kinds of fluid flow	52
3.9	Dynamics of fluid flow	53
3.10	Energy equation for an ideal fluid flow	53
3.11	Modified energy equation for real fluid flows	55
3.12	Separation and cavitation in fluid flows	57
3.13	Impulse-momentum equation	58
3.14	Energy losses in sudden transitions	58
3.15	Flow measurement through pipes	59
3.16	Flow measurement through orifices and mouthpieces	62
3.17	Flow measurement in channels	66
	Worked examples	70
	Recommended reading	86
	Problems	86
<b>Chapter 4</b>	<b>Flow of Incompressible Fluids in Pipelines</b>	<b>91</b>
4.1	Resistance in circular pipelines flowing full	91
4.2	Resistance in non-circular sections	95
4.3	Local losses	96
	Worked examples	97
	Recommended reading	118
	Problems	118
<b>Chapter 5</b>	<b>Pipe Network Analysis</b>	<b>121</b>
5.1	Introduction	121
5.2	The head balance method ('loop' method)	122
5.3	The quantity balance method ('nodal' method)	123
5.4	Newton Raphson method	125
5.5	The linear theory method	125
	Worked examples	126
	Recommended reading	139
	Problems	139
<b>Chapter 6</b>	<b>Pump-Pipeline System Analysis and Design</b>	<b>145</b>
6.1	Introduction	145
6.2	Hydraulic gradient in pump-pipeline systems	146
6.3	Multiple pump systems	147
6.4	Variable speed pump operation	148
6.5	Suction lift limitations	149
	Worked examples	151
	Recommended reading	164
	Problems	164

<b>Chapter 7</b>	<b>Boundary Layers on Flat Plates and in Ducts</b>	<b>168</b>
7.1	Introduction	168
7.2	The laminar boundary layer	168
7.3	The turbulent boundary layer	169
7.4	Combined drag due to both laminar and turbulent boundary layers	170
7.5	The displacement thickness	170
7.6	Boundary layers in turbulent pipe flow	171
7.7	The laminar sub-layer	173
	Worked examples	175
	Recommended reading	183
	Problems	183
<b>Chapter 8</b>	<b>Steady Flow in Open Channels</b>	<b>185</b>
8.1	Introduction	185
8.2	Uniform flow resistance	186
8.3	Channels of composite roughness	187
8.4	Channels of compound section	188
8.5	Channel design	189
8.6	Uniform flow in part full circular pipes	191
8.7	Steady, rapidly varied channel flow-energy principles	194
8.8	The momentum equation and the hydraulic jump	195
8.9	Steady, gradually varied open channel flow	197
8.10	Computations of gradually varied flow	198
8.11	Graphical and numerical integration methods	199
8.12	The direct step method	199
8.13	The standard step method	199
8.14	Canal delivery problems	201
8.15	Culvert flow	203
8.16	Spatially varied flow in open channels	204
	Worked examples	206
	Recommended reading	243
	Problems	244
<b>Chapter 9</b>	<b>Dimensional Analysis, Similitude and Hydraulic Models</b>	<b>249</b>
9.1	Introduction	249
9.2	Dimensional analysis	250
9.3	Physical significance of non-dimensional groups	250
9.4	The Buckingham $\pi$ theorem	251
9.5	Similitude and model studies	251
	Worked examples	252
	Recommended reading	266
	Problems	266
<b>Chapter 10</b>	<b>Ideal Fluid Flow and Curvilinear Flow</b>	<b>268</b>
10.1	Ideal fluid flow	268

10.2	Streamlines, the stream function	268
10.3	Relationship between discharge and stream function	270
10.4	Circulation and the velocity potential function	270
10.5	Stream functions for basic flow patterns	271
10.6	Combinations of basic flow patterns	272
10.7	Pressure at points in the flow field	273
10.8	The use of flow nets and numerical methods	273
10.9	Curvilinear flow of real fluids	277
10.10	Free and forced vortices	278
	Worked examples	278
	Recommended reading	290
	Problems	290
<b>Chapter 11</b>	<b>Gradually Varied Unsteady Flow from Reservoirs</b>	<b>293</b>
11.1	Discharge between reservoirs under varying head	293
11.2	Unsteady flow over a spillway	295
11.3	Flow establishment	296
	Worked examples	297
	Problems	307
<b>Chapter 12</b>	<b>Mass Oscillations and Pressure Transients in Pipelines</b>	<b>309</b>
12.1	Mass oscillation in pipe systems – surge chamber operation	309
12.2	Solution neglecting tunnel friction and throttle losses for sudden discharge stoppage	311
12.3	Solution including tunnel and surge chamber losses for sudden discharge stoppage	312
12.4	Finite difference methods in the solution of the surge chamber equations	312
12.5	Pressure transients in pipelines (waterhammer)	314
12.6	The basic differential equations of waterhammer	315
12.7	Solutions of the waterhammer equations	317
12.8	The Allievi equations	318
12.9	Alternative formulation	321
12.10	The Schnyder–Bergeron graphical method	322
12.11	Pipeline friction and other losses	324
12.12	Pressure transients at interior points	325
12.13	Pressure transients caused by pump stoppage	326
	Worked examples	328
	Recommended reading	339
	Problems	339
<b>Chapter 13</b>	<b>Unsteady Flow in Channels</b>	<b>341</b>
13.1	Introduction	341
13.2	Gradually varied unsteady flow	341
13.3	Surges in open channels	342
13.4	The upstream positive surge	343
13.5	The downstream positive surge	345
13.6	Negative surge waves	345

13.7 The dam break	347
Worked examples	348
Recommended reading	351
Problems	351
<b>Chapter 14 Uniform Flow in Loose-Boundary Channels</b>	<b>353</b>
14.1 Introduction	353
14.2 Flow regimes	353
14.3 Incipient (threshold) motion	353
14.4 Resistance to flow in alluvial (loose bed) channels	355
14.5 Velocity distributions in loose-boundary channels	357
14.6 Sediment transport	357
14.7 Bed load transport	359
14.8 Suspended load transport	361
14.9 Total load transport	363
14.10 Regime channel design	364
14.11 Rigid bed channels with sediment transport	369
Worked examples	371
Recommended reading	383
Problems	385
<i>Answers</i>	388
<i>Index</i>	395
<i>Conversion Table (Metric to Imperial Units)</i>	401
