CONTENTS

Preface	xiii
Acknowledgments	xvii
1 Introduction	1
1.1 Background: A Brief History of U.S. Electric Utility Formation and Restructuring	1
1.2 Power Deregulation and Distributed Generation	3
1.3 DG Types	7
1.4 Fuel Cell DG	9
1.5 The Hydrogen Economy	13
1.5.1 Introduction	13
1.5.2 Challenges of Transition to a Hydrogen Economy	14
1.5.3 Hydrogen Production	15
1.5.3.1 Hydrogen Production by Reforming Natural Gas	16
1.5.3.2 Hydrogen Production from Coal	17
1.5.3.3 Hydrogen Production from Nuclear Energy	18
1.5.3.4 Hydrogen Production by Water Electrolysis	19

1.5.3.5	Solar Energy to Hydrogen	19
1.5.3.6	Wind Energy to Hydrogen	20
1.5.3.7	Biomass Energy to Hydrogen	20
1.5.4	Hydrogen Storage and Distribution	21
1.5.5	Department of Energy Hydrogen-Related Activities	22
1.5.5.1	Hydrogen Production	22
1.5.5.2	Hydrogen Basic Research	23
1.5.5.3	Hydrogen Delivery	23
1.5.5.4	Hydrogen Storage	24
1.5.5.5	Hydrogen Energy Conversion (Fuel Cells)	24
1.5.6	The Role of This Book	26
	References	27
2	Principles of Operation of Fuel Cells	29
2.1	Introduction	29
2.2	Chemical and Thermal Energy of an Element	30
2.3	Fundamentals of Thermodynamics	31
2.3.1	The First Law of Thermodynamics	31
2.3.2	The Second Law of Thermodynamics	32
2.4	Fundamentals of Electrochemical Processes	34
2.4.1	The Gibbs Free Energy	34
2.5	Energy Balance in Chemical Reactions	35
2.6	The Nernst Equation	37
2.7	Fuel Cell Basics	38
2.8	Types of Fuel Cells	40
2.9	Fuel Cell Equivalent Circuit	53
2.10	Capacitance of Double-Layer Charge Effect	54
2.11	Summary	55
	References	56
3	Dynamic Modeling and Simulation of PEM Fuel Cells	57
3.1	Introduction: Need for Fuel Cell Dynamic Models	57
3.2	Nomenclature (PEMFC)	58
3.3	PEMFC Dynamic Model Development	60
3.3.1	Gas Diffusion at the Electrodes	62
3.3.2	Material Conservation	64
3.3.3	PEMFC Output Voltage	65

3.3.4	PEMFC Voltage Drops	67
3.3.5	Thermodynamic Energy Balance for PEMFC	69
3.4	PEMFC Model Structure	71
3.5	Equivalent Electrical Circuit Model of PEMFC	72
3.6	PEMFC Model Validation	77
	References	83

4 Dynamic Modeling and Simulation of Solid Oxide Fuel Cells **85**

4.1	Introduction	85
4.2	Nomenclature (SOFC)	86
4.3	SOFC Dynamic Model Development	88
4.3.1	Effective Partial Pressures	89
4.3.2	Material Conservation	92
4.3.3	SOFC Output Voltage	94
4.3.3.1	Activation Voltage Drop	95
4.3.4	Thermodynamic Energy Balance for Tubular SOFC	98
4.3.4.1	The Fuel Cell Tube	99
4.3.4.2	Fuel	100
4.3.4.3	Air Between Cell and Air Supply Tube (AST)	100
4.3.4.4	Air Supply Tube	101
4.3.4.5	Air in AST	101
4.4	SOFC Dynamic Model Structure	102
4.5	SOFC Model Response—Constant Fuel Flow Operation	103
4.5.1	Steady-State Characteristics	103
4.5.2	Dynamic Response	106
4.5.2.1	Dynamics Due to the Double-Layer Charge Effect	106
4.5.2.2	Dynamics Due to the Effect of Pressure	108
4.5.2.3	Dynamics Due to the Effect of Temperature	109
4.6	SOFC Model Response—Constant Fuel Utilization Operation	111
4.6.1	Steady-State Characteristics	112
4.6.2	Dynamic Response	113
	References	114

5	Principles of Operation and Modeling of Electrolyzers	116
5.1	Principle of Operation of Electrolyzers	116
5.2	Dynamic Modeling of Electrolyzers	117
5.2.1	Electrolyzer Steady-State (V-I) Characteristics	119
5.2.2	Modeling Hydrogen Production Rate	120
5.2.3	Electrolyzer Thermal Model	122
5.3	Electrolyzer Model Implementation	123
	References	125
6	Power Electronic Interfacing Circuits for Fuel Cell Applications	126
6.1	Introduction	126
6.2	Overview of Basic Power Electronic Switches	128
6.2.1	Diode	128
6.2.2	Thyristor	129
6.2.3	Bipolar Junction Transistor (BJT)	130
6.2.4	Metal-Oxide Semiconductor Field Effect Transistor (MOSFET)	131
6.2.5	Gate Turn-Off Thyristor (GTO)	132
6.2.6	Insulated Gate Bipolar Transistor (IGBT)	133
6.2.7	MOS-Controlled Thyristor (MCT)	133
6.3	ac/dc Rectifiers	135
6.3.1	Circuit Topologies	135
6.3.2	Simplified Model for Three-Phase Controllable Rectifiers	138
6.4	dc to dc Converters	140
6.4.1	Boost Converters	141
6.4.1.1	Circuit Topology	141
6.4.1.2	Small-Signal State-Space Model	142
6.4.1.3	Average Model for Long-Time Simulation	144
6.4.2	<i>Buck Converters</i>	<i>146</i>
6.4.2.1	Circuit Topology	146
6.4.2.2	Small-Signal State-Space Model for Buck dc/dc Converters	148
6.4.2.3	Average Model for Long-Time Simulation	149

6.5	Three-Phase dc/ac Inverters	150
6.5.1	Circuit Topology	150
6.5.2	State-Space Model	153
6.5.3	<i>abc/dq</i> Transformation	156
6.5.4	<i>dq</i> Representation of the State-Space Model	157
6.5.5	Ideal Model for Three-Phase VSI	159
	References	162

7 Control of Grid-Connected Fuel Cell Power Generation Systems 163

7.1	Introduction	163
7.2	Grid-Connected System Configuration	164
7.2.1	PEMFC Unit Configuration	166
7.2.2	SOFC Unit Configuration	166
7.3	Controller Designs for dc/dc Converters and the Inverter	168
7.3.1	Circuit and Controller Design for the Boost dc/dc Converter	168
7.3.1.1	Circuit Design	168
7.3.1.2	Controller Design	170
7.3.2	Controller Design for the Three-Phase VSI	173
7.3.2.1	Current Control Loop	174
7.3.2.2	Voltage Control Loop	176
7.3.2.3	Overall Power Control System for the Inverter	181
7.4	Simulation Results	182
7.4.1	Desired P and Q Delivered to the Grid—Heavy Loading	182
7.4.1.1	PEMFC DG	182
7.4.1.2	SOFC DG	184
7.4.2	Desired P Delivered to the Grid, Q Consumed from the Grid: Light Loading	186
7.4.2.1	PEMFC DG	187
7.4.2.2	SOFC DG	188
7.4.3	Load-Following Analysis for Fuel Cells	189
7.4.3.1	Fixed Power Supply from the Grid	189
7.4.3.2	Fixed Power Supply from the FCDG	191
7.4.4	Fault Analysis	192
7.5	Summary	195
	References	195

8	Control of Stand-Alone Fuel Cell Power Generation Systems	198
8.1	Introduction	198
8.2	System Description and Control Strategy	199
8.3	Load Transient Mitigation Control	201
8.3.1	Circuit Model for Lead–Acid Batteries	202
8.3.2	Battery Charge/Discharge Controller	203
8.3.3	Filter Design	204
8.4	Simulation Results	205
8.4.1	The Load Transients	206
8.4.1.1	The dc Load Transients	206
8.4.1.2	The ac Load Transients	207
8.4.2	Load Transient Mitigation	209
8.4.2.1	PEMFC System	209
8.4.2.2	SOFC System	212
8.4.3	Battery Charge/Discharge Controller	214
8.5	Summary	216
	References	216
9	Hybrid Fuel Cell Based Energy System Case Studies	219
9.1	Introduction	219
9.2	Hybrid Electronically Interfaced Systems	221
9.2.1	The dc-Coupled Systems	222
9.2.2	The ac-Coupled Systems	224
9.2.3	Stand-Alone Versus Grid-Connected Systems	225
9.3	Fuel Cells in Hybrid Combined Heat and Power Operation Mode	226
9.4	Case Study I: A Hybrid Stand-Alone Wind–PV–FC System	227
9.4.1	System Configuration	227
9.4.2	System Unit Sizing	230
9.4.3	System Component Characteristics	232
9.4.3.1	The Wind Energy Conversion System Model	233
9.4.3.2	The Photovoltaic Array Model	234
9.4.3.3	The Fuel Cell and Electrolyzer Models	235
9.4.4	System Control	236
9.4.4.1	The Overall Power Management Strategy	236

9.4.4.2	The Wind-Turbine Pitch Angle Controller	236
9.4.4.3	The PV Maximum Power Point Tracking (MPPT) Control	238
9.4.4.4	The ac Bus Voltage Regulator	240
9.4.4.5	The Electrolyzer Controller	241
9.4.5	Simulation Results	241
9.5	Case Study II: SOFC Efficiency Evaluation in Hybrid Operation Mode	247
9.5.1	Thermodynamic Laws and SOFC Efficiency	248
9.5.2	Hydrogen Fuel Heating Values	253
9.5.3	SOFC Electrical Efficiency	255
9.5.4	SOFC Efficiency in Hybrid CHP Operation Mode	256
9.6	Summary	259
	References	260
10	Present Challenges and Future of Fuel Cells	265
10.1	Introduction	265
10.2	Fuel Cell System Operations	266
10.2.1	Fuel Processor	266
10.2.2	Fuel Cell Stack	267
10.2.3	Power Conditioner System	269
10.2.4	Balance of Plant (BOP) Systems	272
10.3	Present Challenges and Opportunities	272
10.3.1	Cost	272
10.3.2	Fuel and Fuel Infrastructure	273
10.3.3	Materials and Manufacturing	274
10.4	U.S. Fuel Cell R&D Programs	275
10.4.1	DOE's SOFC-Related Programs	276
10.5	Future of Fuel Cells: A Summary and Authors Opinions	278
