CONTENTS

PREFACE	ix
STUDY GUIDE	xii
1. INTRODUCTION	1
1.1 Basic Concepts	1
1.2 Examples of Networks	3
1.3 Classification of Network Problems	8
1.4 Efficiency of Algorithms	13
1.5 The Process of Network Analysis	15
2. GRAPHS AND DIGRAPHS	17
2.1 Graphs and Isomorphisms	18
2.2 Adjacency and Incidence for Graphs	23
2.3 Paths and Cycles in Graphs	26
2.4 Examples of Graphs	30
2.5 Representing a Graph	32
2.6 Digraphs and Isomorphisms	35
2.7 Adjacency and Incidence for Digraphs	39
2.8 Paths and Cycles in Digraphs	40
2.9 Representing a Digraph	43
3. FLOWS IN BASIC NETWORKS	51
3.1 Basic Networks	52
3.2 Flow-augmenting Paths	54

3.3	Maximum Flows and Minimum Cuts	58
3.4	The Max-flow Min-cut Theorem	62
3.5	The Maximum Flow Algorithm	67
4.	VARIATIONS ON THE BASIC FLOW PROBLEM	78
4.1	Three Transformations	79
4.2	Networks with Lower and Upper Capacities	83
5.	MULTI-TERMINAL FLOWS	96
5.1	The Capacity Rule	97
5.2	The Algorithm of Gomory and Hu	102
5.3	The Basic Algorithm	105
5.4	The Full Algorithm	110
6.	PATHS AND CONNECTIVITY	118
6.1	Connected Graphs and Digraphs	118
6.2	Menger's Theorem for Graphs (edge-form)	126
6.3	Some Analogues of Menger's Theorem	130
6.4	The Proof of Menger's Theorem	134
6.5	Telecommunication Networks	138
7.	LONGEST AND SHORTEST PATH ALGORITHMS	148
7.1	The Shortest Path Algorithm	149
7.2	The Longest Path Algorithm	154
7.3	The Maximum-flow Minimum-Cost Algorithm	158
8.	TREES	166
8.1	Mathematical Properties of Trees	167
8.2	Constructing Spanning Trees	169
8.3	Searching Trees	178
8.4	Counting Trees	187
8.5	Offshore Natural Gas Pipe-line Systems	187
9.	PHYSICAL NETWORKS: MODELLING	200
9.1	Components and Through and Across Variables	201
9.2	Graphical Representation	207
9.3	Assumptions made in Modelling Component Behaviour	220

10. ELECTRICAL NETWORKS: MATRIX EQUATIONS	228
10.1 Kirchhoff's Voltage Law Equations	229
10.2 Fundamental Cycles	231
10.3 Kirchhoff's Current Law Equations	236
10.4 Fundamental Cutsets	238
10.5 Obtaining the Fundamental Cycle and Cutset Matrices	242
10.6 Tellegen's Theorem	249
11. ELECTRICAL NETWORKS: SOLVING THE EQUATIONS	257
11.1 Formulation of the Matrix Equations	259
11.2 Solving the Matrix Equation	268
11.3 State Equations	274
12. MATCHING PROBLEMS	284
12.1 The Marriage Problem	285
12.2 The Modified Marriage Problem	291
12.3 Two Proofs of the Marriage Theorem	297
12.4 An Algorithm for Finding a Maximum Matching	301
13. THE ASSIGNMENT PROBLEM	315
13.1 The Hungarian Algorithm for the Assignment Problem	317
13.2 Variations on the Assignment Problem	325
14. THE TRANSPORTATION PROBLEM	335
14.1 The Hungarian Algorithm for the Transportation Problem	337
14.2 An Alternative Algorithm for the Transportation Problem	352
14.3 The Transshipment Problem	357
15. CRITICAL PATH ANALYSIS	365
15.1 Activity Networks which use Vertices to Represent Activities	367
15.2 Activity Networks which use Vertices to Represent Events	374

15.3	Comparison of the Two Types of Activity Network	376
15.4	Critical Paths	377
15.5	Earliest and Latest Starting Times	382
16.	SCHEDULING	390
16.1	Scheduling a Project for a Given Number of Workers	391
16.2	The Critical Path Scheduling Algorithm	393
16.3	Algorithms with Protection Schemes	398
17.	PACKING PROBLEMS	403
17.1	The Bin-packing Problem	403
17.2	The Knapsack Problem	406
18.	LOCATION PROBLEMS	414
18.1	Vertex Single-centre Location Problems	415
18.2	Vertex Multi-centre Location Problems	418
18.3	Absolute Centre Location Problems	422
19.	THEORY OF NETWORK ANALYSIS	431
19.1	Properties of Network Models	432
19.2	Linear Programming Formulation of Network Problems	436
19.3	The Dual Form of a Network Problem	438
19.4	Dual Forms of Other Network Problems	444
20.	ALGORITHMS AND NP-COMPLETENESS	450
20.1	Efficiency of Algorithms	450
20.2	NP-complete Problems	455
	SUGGESTIONS FOR FURTHER READING	461
	POSTSCRIPT	465
	SOLUTIONS TO PROBLEMS IN THE TEXT	466
	INDEX	537
