

# Transition Ion Electron Paramagnetic Resonance

---

J. R. PILBROW

*Department of Physics  
Monash University, Victoria, Australia*

*Pil 1*

CLARENDON PRESS • OXFORD  
1990

Inventar Nr. M3401 PC 3

# Contents

1	Introduction to electron paramagnetic resonance	1
1.1	EPR due to mainly two-level systems	3
1.2	Some transition-ion EPR spectra	9
1.3	Crystal fields and ligand fields	25
1.4	Relation between point symmetry and EPR spectra	31
1.5	Relaxation, relaxation times, and linewidths	35
1.6	Implications of magnetic field sweep	42
1.7	Double resonance	56
1.8	Time-domain EPR	60
1.9	Conclusion	61
2	Crystal and ligand fields and the spin Hamiltonian	62
2.1	Introduction	62
2.2	Review of atomic theory	63
2.3	Crystal field theory	68
2.4	Superposition model	78
2.5	Molecular orbital theories	80
2.6	Ligand field theory	83
2.7	Theoretical description of EPR	90
2.8	The Jahn–Teller effect	102
2.9	Concluding remarks	114
3	Spin Hamiltonian parameters for transition ions	115
3.1	$d^1$	116
3.2	$d^3$	120
3.3	$d^5$	125
3.4	$d^7$	144
3.5	$d^9$	154
3.6	Line broadening with fine structure	167
3.7	Resolution of ambiguities	170
4	Experimental methods in CW-EPR	174
4.1	Introduction	174
4.2	EPR spectrometers—principles of design	176
4.3	Modulation techniques	181
4.4	Sensitivity	187
4.5	Sample resonators	193
4.6	Choice of microwave frequency	200
4.7	Sample preparation	203
4.8	Low-temperature EPR	204

4.9	High temperatures	205
4.10	Pressure	205
4.11	Computers in EPR	206
5	Linewidths and computer simulation in CW-EPR	211
5.1	Need for quantitative interpretation of EPR lineshapes	211
5.2	Single crystals	213
5.3	Powder and powder-like EPR spectra	218
5.4	Powder simulations $S \geq 1$	234
5.5	Quantitative spin determination	237
5.6	Partially ordered systems	238
5.7	Linewidths	242
5.8	Statistical models of line broadening	243
6	Representative examples of transition-metal ion EPR	260
6.1	Planar macrocycles	260
6.2	Oxygen co-ordination	262
6.3	First-row transition ions in ionic crystals	275
6.4	Semiconductors	282
6.5	Phase transitions	287
6.6	Second- and third-row transition ions	293
6.7	Glasses	305
6.8	Examples of Jahn–Teller systems	310
6.9	Zeolites and other catalysts	317
6.10	Low-symmetry effects	321
6.11	Electrochemical production of paramagnetic transition ions	327
6.12	Irradiated complexes	329
7	Coupled paramagnetic systems	332
7.1	Pair interactions	332
7.2	Similar ion dimers (general case)	338
7.3	Dipolar coupled dimer complexes	341
7.4	Examples of pair interactions	361
7.5	Metal–nitroxyl and metal–radical interactions	365
7.6	Multicentre couplings	366
8	Paramagnetic relaxation	368
8.1	Introduction	368
8.2	Classical rate theory	371
8.3	Resonance in the rotating frame	377
8.4	Measurement of relaxation times	378
8.5	Theories of spin–lattice relaxation	383
8.6	Spin–spin broadening	393
9	Double resonance	395
9.1	Introduction	395
9.2	Introduction to the theory of ENDOR	397

9.3	Experimental	408
9.4	Transition-metal ion and ligand-ENDOR	418
10	Electron spin echo modulation	440
10.1	Electron spin echo	442
10.2	ESE experimental	453
10.3	Model calculations for ESEEM	458
10.4	Pulsed ENDOR	460
10.5	Pulse field-swept EPR	461
10.6	Examples of ESEEM and pulsed ENDOR	462
10.7	The linear electric field effect	477
11	Biological applications of transition-ion EPR	481
11.1	Metal proteins	483
11.2	Copper proteins	485
11.3	EPR of iron proteins	499
11.4	Iron-sulfur proteins	507
11.5	Mitochondrial electron transport chain	515
11.6	Molybdenum-containing enzymes	521
11.7	Nitrite reductase and sulfite reductases	529
11.8	Nickel-containing enzymes	529
11.9	Intrinsic cobalt	531
11.10	Paramagnetic metal-substituted enzymes	537
11.11	Vanadium	542
11.12	Transition metal centres in photosynthesis	543
11.13	Binding of planar copper complexes to DNA	547
11.14	Bleomycin	552
11.15	Other anticancer drugs	554
12	Zero-field EPR	555
12.1	Introductory theory of zero-field resonance	556
12.2	Instrumentation	557
12.3	Examples of ZFR	562
12.4	Conclusion	570
<i>Appendix A</i>	Numerical constants and conversion factors	571
<i>Appendix B</i>	Some quantum-mechanical definitions	573
<i>Appendix C</i>	Angular momentum and angular momentum matrices	575
C.1	Orbital angular momentum	575
C.2	Generalized angular momenta	575
C.3	Angular momentum matrices	576
<i>Appendix D</i>	Real representation for <i>d</i> - and <i>p</i> -orbitals	584
<i>Appendix E</i>	Spin-orbit matrices for a <i>d</i> -electron	586
<i>Appendix F</i>	Matrices of hyperfine operators $a_z$ and $a_{\pm}$	590
<i>Appendix G</i>	The eigenvalue problem in quantum mechanics (orthogonal basis)	594

<i>Appendix H</i>	Exact solutions for $2 \times 2$ matrices	598
<i>Appendix I</i>	Some perturbation formulae	600
I.1	Time-independent perturbation results for orthogonal states	600
I.2	Time-dependent perturbation theory	601
<i>Appendix J</i>	Anisotropy in EPR	603
J.1	First-order theory	603
J.2	Second-order effects	610
J.3	References to perturbation theory in EPR	616
<i>Appendix K</i>	Hyperfine energy levels in weak and zero magnetic fields	618
K.1	Hyperfine levels in zero magnetic field: $S = \frac{1}{2}, I = \frac{1}{2}$	618
K.2	Hyperfine levels in weak magnetic fields: $S = \frac{1}{2}, I = \frac{1}{2}$	620
K.3	$S > 1, I > 1$	620
<i>Appendix L</i>	Angular anomalies	621
<i>Appendix M</i>	A note regarding time-reversal symmetry	622
<i>Appendix N</i>	$g$ - and $A$ -values for tetragonal copper (II)	624
N.1	$g$ -values	624
N.2	Hyperfine structure	626
N.3	Conclusions from first-order theory	627
N.4	Second-order calculation (Pilbrow and Spaeth 1967b)	627
<i>Appendix O</i>	Cobalt (II) hyperfine structure: distorted tetrahedron	629
<i>Appendix P</i>	Effective $g$ -values in EPR	631
P.1	$S = \frac{3}{2}$ ion in the low magnetic field limit (Pilbrow 1978)	631
P.2	Hyperfine structure in the doublets: first-order theory	635
P.3	Effective $g$ -factors from expansion of exact eigenvalues	636
P.4	Relationships for effective $g$ -factors: $S = \frac{5}{2}$	637
<i>Appendix Q</i>	Shape functions	639
<i>Appendix R</i>	$1/g$ factor for $\delta$ -function lineshapes	641
<i>Appendix S</i>	Tune and operate mode patterns	642
S.1	Tune mode	642
S.2	Operate mode	644
<i>Appendix T</i>	Computer analysis and fitting of EPR spectra	646
T.1	Specifically powder spectra simulations	646
<i>Appendix U</i>	Structural formulae	648
